Recent evidence indicates that there has been a reduction in the stratospheric ozone over the Northern Hemisphere, as well as the antarctic and arctic latitudes. This has resulted in an increased penetration of ultraviolet B (UVB), as measured in Canada since 1989, which could eventually result in an increase in human skin cancer incidence. This would be especially true for the nonmelanoma skin cancers (NMSCs), basal cell carcinomas and squamous cell carcinomas. In addition, the third most common skin cancer, the malignant melanoma, would also increase in incidence. The relationship between UVB radiation and melanoma formation is much less clear than it is for NMSCs. Clinically, people with a loss or lack of melanin protection, such as those with occulocutaneous albinism and vitiligo or, much commonly, people with light skin, eyes, and hair would be at greater risk. Liu, Z., **Atmospheric boundary layer dynamics near Ross Island and over West Antarctica,** Columbus, Ohio State University, 1995, 304p., University Microfilms order No.96-12231, Ph.D. thesis. Refs. passim.

The atmospheric boundary layer dynamics near Ross I. and over West Antarctica has been investigated. The study consists of two parts. The observational analysis, for the first time, revealed that the airflow passing through the Ross I. area is supplied mainly by enhanced katabatic drainage from Byrd Glacier and secondarily drainage from Mulock and Skelton glaciers. The observed diurnal variation of the blocking effect near Ross I. is dominated by the changes in the upstream katabatic airflow. The synthesized analysis over West Antarctica found that the Siple Coast katabatic wind confluence zone consists of two superimposed katabatic airflows: a relatively warm and more buoyant katabatic flow from West Antarctica overlies a colder and less buoyant katabatic airflow from East Antarctica. The force balance analysis revealed that, inside the west antarctic katabatic wind zone, the pressure gradient force associated with the blocked airflow against the Transantarctic Mountains dominates; inside the east antarctic katabatic wind zone, the downslope buoyancy force due to the cold air overlying the sloping terrain is dominant. The analysis also shows that these forces are in geostrophic balance with the Coriolis force. (Auth. mod.)

Kumar, N., et al, **Increased biological productivity and export production in the glacial southern ocean,** *Nature,* Dec. 14, 1995, 378(6558), p.675-680, 56 refs.

A range of complementary radionuclide proxies in sediments of the southernmost Atlantic Ocean over the past 140,000 years indicate that glacial periods were characterized by greatly increased fluxes of biogenic detritus out of surface waters. This increase in export production, which may have contributed to lower concentrations of carbon dioxide in the glacial atmosphere, was accompanied by more than a fivefold increase in accumulation of lithogenic iron transported by winds from Patagonian deserts. These observations support the hypothesis that the iron limitation of today's southern ocean productivity was relieved in glacial periods by a greater supply of iron from wind-blown dust. (Auth.)

Niemistö, L., Perttilä, M., **Trace elements in the Weddell Sea water and sediments in the continental shelf area,** *Chemosphere,* Oct. 1995, 31(7), p.3643-3650, 17 refs.

During the Finnish antarctic cruise FINNARP89, a relatively rapid sedimentation area was found at the edge of the continental shelf in the vicinity of the ice edge. The average rate of sedimentation in the topmost sediment surface, measured by means of ^{210}Pb technique, was 0.2 mm/y, an order of magnitude higher than in the open Weddell Sea area. (Auth.)

Häkkinen, S., **Seasonal simulation of the southern ocean coupled ice-ocean system,** *Journal of geophysical research,* Nov. 15, 1995, 100(C11), p.22,733-22,748, 58 refs.

The southern ocean ice-ocean system is investigated using a coupled model developed at Princeton University. The ocean model uses the primitive equations and solves the second-moment closure for turbulent mixing; the snow-ice model uses a three-level thermodynamic scheme resembling Semtner's (1976) model. The focus here is to study the seasonal variability of the ice covered areas and water mass formation. The model simulates reasonably well the seasonal cycle of the ice cover in the southern ocean. The annual rapid advance of the ice extent is tied to the ice advection away from the coast toward the Antarctic Circumpolar Current (ACC), where it melts rapidly with the increase of radiative fluxes in the austral spring. The oceanic heat fluxes are up to 100 W/m^2 in open water areas and along the coastal areas except in the Weddell and Ross Seas, which are occupied by a year-round sea ice cover and have average heat flux of 20 W/m^2 or less. The Atlantic meridional heat flux is zero at 34°S (northern boundary of the model), which is an inadequancy in the model. In the Indian Ocean sector the flux is southward, while in the Pacific sector it is weak and equatorward. From the water mass balance the authors deduce that the Antarctic Bottom Water (AABW) annual production is 12 Sv in the Atlantic sector and 5 Sv in the Ross Sea. Intermediate water types are produced in the Indian Ocean sector, where some of the AABW is lost during that conversion. In the Atlantic sector, 6 Sv of the annually formed AABW is advected north across the ACC. In the Pacific sector the northward AABW flow is 7.5 Sv, which is in excess of the Ross Sea production, suggesting that a considerable portion of the AABW formed in the Weddell Sea is contributing to that flux. (Auth. mod.)

Foster, T.D., **Large, steplike temperature and salinity structures observed in the central Weddell Sea,** *Antarctic journal of the United States,* 1994, 29(5), p.99-100, 1 ref.

As part of a project to study the formation of Antarctic Bottom Water in the Weddell Sea, three oceanographic expeditions have been carried out in the northwestern sector of the Weddell Sea. On each of these expeditions, time series were carried out of CTD (conductivity-temperature-depth) stations to investigate the very large, up to about 500 m thick, steplike structures in the temperature and salinity vertical profiles observed in the central regions of the Weddell Sea since 1973. The 1991 time series showed that internal waves with approximately semidiurnal frequency (that is, internal tides) move the principal interfaces up and down to different pressure levels. The pressure changes at the largest interface by about 80 decibars, and thus may trigger an instability due to the pressure effect on the equation of state.

Nittrouer, C.A., Jaeger, J.M., DeMaster, D.J., **Advection of suspended sediment in the Ross Sea and implications for the fate of biogeochemical materials,** *Antarctic journal of the United States,* 1994, 29(5), p.106-107, 3 refs.

As part of a multidisciplinary study to investigate the fate of biogeochemical materials (biogenic silica, carbon, and nitrogen), the validity of one-dimensional particle sinking models has been investigated. Measurements of biological uptake were made in surface waters, particles sinking vertically were collected in sediment traps, and the particles reaching the seabed were sampled by coring. Quantitative and qualitative differences between the material collected at the various locations have been used to evaluate the processes affecting its fate. A particular concern has been that productivity in surface waters may have little relevance to material at depth in the water column or seabed, due to lateral advection by currents. To investigate particle advection, instrumented moorings were placed at 3 sites in the Ross Sea, and they collected data for 1 year periods during 2 consecutive years (1990-92). To test the validity of one-dimensional particle sinking, a computer model was developed using moored current-meter data and particle-settling velocities. The results of the model strongly reflect the varying water velocities at the 3 moorings.

Jacobs, S.S., Hellmer, H.H., Schlosser, P., Smethie, W.M., Jr., **Oceanographic expedition to the Amundsen and Bellingshausen Seas,** *Antarctic journal of the United States,* 1994, 29(5), p.109-111, 16 refs.

The icebreaker *Nathaniel B. Palmer* was engaged from Feb. 14 to Apr. 5, 1994 to conduct an oceanographic investigation along the southeast Pacific-Antarctic continental margin. The National Science Foundation and other agencies supported several projects that complemented the primary ocean measurements. These included geochemical sampling for carbon dioxide, chlorofluorocarbons (CFCs), helium isotopes, oxygen isotopes, tritium, and nutrients. Preliminary results reveal that the Amundsen and Bellingshausen Sea shelves are remarkably different from similarly broad shelf regions in the Ross and Weddell Seas. The local bottom topography differs widely from that shown on currently available charts; canyons or depressions often extend to or along the coastline. The authors encountered large numbers of icebergs, similarly to 1992 observations along the antarctic circle in this sector.

Rubin, S., Goddard, J., Chipman, D., Takahashi, T., **Carbon dioxide partial pressure in surface waters in the Pacific sector of the southern oceans during austral summers 1992 and 1994,** *Antarctic journal of the United States,* 1994, 29(5), p.113-115, 5 refs.

In Feb. and Mar. of 1992 and 1994, the partial pressure of carbon dioxide (pCO_2) and concentration of total carbon dioxide (TCO_2) dissolved in sea water were determined for surface and deep waters along two cruise tracks in the Pacific sector of the southern ocean. These expeditions included sections across the continental shelf areas of the Bellingshausen and Amundsen Seas. Results show that the Pacific sector of the southern ocean south of 65°S is an atmospheric CO_2 sink.

Hayes, J.M., McTaggart, A.R., **Sample strategy for the study of factors controlling the carbon-13 in algal and sedimentary biomarkers from the Amundsen and Bellingshausen Seas,** *Antarctic journal of the United States,* 1994, 29(5), p.116-117, 8 refs.

The purpose of this project was to study the abundances of carbon-13 (^{13}C) in suspended particulate organic matter and in phytoplankton-specific molecules and to determine which oceanographic factors most significantly control the photosynthetic fractionation of carbon isotopes. This study will provide baseline information allowing more detailed interpretation of isotopic signals in terms of specific processes and conditions in marine water columns.

Gründlingh, M.L., **Surface wave conditions at Marion Island,** *South African journal of antarctic research,* 1994, 24(1&2), p.95-101, With Afrikaans summary. 23 refs.

The surface wave climate and wave profiles in the vicinity of Marion I. are investigated, using SWH (significant wave height) from the Geosat altimeter between 1986 and 1989. The average SWH varies between 3.2 m (summer) to 4.8 (winter) with a maximum of 9.3 m. A wave-height trough in the lee (i.e., east) of Marion amounts to 0.4 to 2.8 m below the open ocean levels. The reduction in SWH may influence the mixing characteristics in the lee of Marion. (Auth.)

J-54200

Weimerskirch, H., Wilson, R.P., Guinet, C., Koudil, M., **Use of seabirds to monitor sea-surface temperatures and to validate satellite remote-sensing measurements in the southern ocean,** *Marine ecology progress series,* Oct. 5, 1995, 126(1-3), p.299-303, 12 refs.

Changes in sea-surface temperature (SST), including the position of the sub-tropical convergence of the southern Indian Ocean, were ascertained by using wandering albatrosses *Diomedea exulans* fitted with temperature recorders and by satellite tracking systems. Flight phases interspaced with frequent pauses on the sea means that albatrosses make useful tools for studying SST in the southern ocean, because *in situ* measurements (to validate satellite data) are rare due to the remoteness of the area. Comparison of satellite-derived data with measurements using albatrosses indicates a good correlation between the two sets of data. It is suggested that albatrosses could be useful for monitoring SST and validating satellite-derived data in remote areas of the southern ocean, particularly in winter when cloud cover precludes satellite measurements of SST. (Auth.)

Wells, N.C., de Cuevas, B.A., **Depth-integrated vorticity budget of the southern ocean from a general circulation model,** *Journal of physical oceanography,* Nov. 1995, 25(11)pt.I, p.2569-2582, 24 refs.

An analysis of the depth-integrated vorticity budget of the U.K. Fine Resolution Antarctic Model is used to investigate the mechanisms that maintain and dissipate vorticity in the Antarctic Circumpolar Current (ACC) and adjacent circulations of the southern ocean. The individual contributions to the vorticity budget are evaluated over the last six years when the model had reached a quasi-steady state. It is shown that the primary balance in the ACC is between the curl of the wind stress and the bottom pressure torque (BPT). Regional analysis reveals that the predominant contribution to BPT is from the Drake Passage, Scotia Sea, and the Argentine Basin. The region to the south of Tasmania and New Zealand also contributes significantly to BPT in the ACC. In addition it is shown that Drake Passage and the Falkland Current are responsible for the major dissipation of the ACC. Within the ACC between 320° and 290°E there is good correspondence between the integrated southward flow and the curl of the wind stress. (Auth. mod.)

Sildam, J., **Cruise ANTARKTIS XII/4 of RV *Polarstern* in 1995: CTD-report,** *Berichte zur Polarforschung,* 1995, No.178, 64p., 3 refs.

This report presents the results of CTD measurements carried out in the Bellingshausen Sea, an area with few CTD measurements. The main part of the report consists of a brief description of the CTD data acquisition and processing routines, the vertical profiles of temperature, salinity and density, and of the distribution plots of these properties along the hydrographic sections. The final part of the report deals with the notably similar structure of the vertical density distribution at different locations when presented as a function of a non-dimensional vertical coordinate. It is pointed out that such a distribution could be an asymptotic limit of stationary mixing along neutral surfaces.

J-54254

Hoppema, M., Fahrbach, E., Schröder, M., Wisotzki, A., De Baar, H.J.W., **Winter-summer differences of carbon dioxide and oxygen in the Weddell Sea surface layer,** *Marine chemistry,* Dec. 1995, 51(3), p.177-192, Refs. p.190-192.

Mid-winter total inorganic carbon (TCO_2) and oxygen measurements are presented for the central fully ice-covered Weddell Sea. Lateral variations of these properties in the surface layer of the central Weddell Sea were small but significant. These variations were caused by vertical transport of Warm Deep Water into the surface layer and air-sea exchange before the ice cover. Oxygen saturation in the surface layer of the central Weddell Sea was near 82%, while in the eastern shelf area it was 89%. In early summer the measurements were repeated. In the shelf area and the central Weddell Sea, where the ice cover had almost disappeared, photosynthesis had caused a decrease of pCO_2 and an increase of oxygen compared to the previous winter. Between these two regions there was an area with significant ice cover where essentially winter conditions prevailed. Based on the summer-winter difference a (late winter) entrainment rate of Warm Deep Water into the surface layer of 4-5 m/month was calculated. A complete surface water balance, including entrainment, biological activity and air-sea exchange, showed that between the winter and summer cruises CO_2 and oxygen had both been absorbed from the atmosphere. (Auth. mod.)

J-54267

Flower, B.P., Kennett, J.P., **Middle Miocene deepwater paleoceanography in the southwest Pacific: relations with East Antarctic Ice Sheet development,** *Paleoceanography,* Dec. 1995, 10(6), p.1095-1112, Refs. p.1111-1112.

A suite of middle Miocene Deep Sea Drilling Project sites in the southwest Pacific reveals large-scale changes in deepwater circulation associated with East Antarctic Ice Sheet (EAIS) variations from ca. 16.5 to 13.8 Ma. Oxygen and carbon isotopic records based on *Cibicidoides* benthic foraminifera from a depth transect and from a meridional transect allow detailed examination of southwest Pacific deepwater circulation from ca. 17.5 to 12 Ma. Data are consistent with the hypothesis that major EAIS growth was fostered by diminished meridional heat transport to the high southern latitudes related to the termination of Tethyan Indian Saline Water and an increase in Southern Component Water production during the early middle Miocene after 15.6 Ma. Further, a maximum vertical carbon isotopic gradient of 0.8 per mill at 13.6 Ma suggests that Southern Component Intermediate Water production and Pacific Deep Water strength were each at a maximum at this time and were critical to major EAIS growth. The establishment of near-modern $\delta^{13}C$ and $\delta^{18}O$ gradients following major EAIS growth from ca. 14.0 to 13.8 Ma marks a major step in the development of the Neogene ocean/cryosphere system. (Auth. mod.)

Hellmer, H.H., Jacobs, S.S., **Temporal changes in shelf water of the southern Ross Sea,** *Antarctic journal of the United States,* 1994, 29(5), p.123-124, 4 refs.

The authors completed an 800 km transect parallel to the Ross Ice Shelf edge, on the USCGC *Polar Sea* from Feb. 4 to 10, 1994. On 42 stations, most begun less than 1 km from the ice front, conductivity-temperature-depth (CTD) measurements were made to within 10 m of the bottom. At several locations the ship drifted rapidly in the coastal current, resulting in tow-yo vertical profiles. The casts were accompanied by sampling for salinity, dissolved oxygen, total carbon dioxide (TCO_2), chlorofluorocarbons, helium, tritium, isotopic oxygen-18, and nutrients. On alternate stations water samples were obtained from the upper 150 m for two other projects. Portions of this transect repeat earlier sections along the Ross Ice Shelf edge, some taken more than 25 years ago. A comparison of preliminary results with earlier observations between 173°W and 174°W reveals that the 1994 data are cooler by approximately 0.4°C and fresher by approximately 0.06 practical salinity units (psu) in the salinity range from 34.40 to 34.55 psu.

J-54299

Frank, M., et al, **Sediment redistribution versus paleoproductivity change: Weddell Sea margin sediment stratigraphy and biogenic particle flux of the last 250,000 years deduced from $^{230}\mathrm{Th}_{ex}$, ^{10}Be and biogenic barium profiles,** *Earth and planetary science letters,* Dec. 1995, 136(3-4), p.559-573, 33 refs.

High resolution $^{230}\mathrm{Th}_{ex}$ and ^{10}Be and biogenic barium profiles were measured at three sediment gravity cores (length 605-850 cm) from the Weddell Sea continental margin. Strong variations in the radionuclide concentrations in the sediments resembling the glacial/interglacial pattern of the δ^{18}O stratigraphy and the ^{10}Be stratigraphy of high northern latitudes were used for establishing a chronostratigraphy. $^{230}\mathrm{Th}^0_{ex}$ fluxes (0 stands for initial) exceeding production by up to a factor of 4 suggest that sediment redistribution processes, linked to variations in bottom water current velocity, played the major role in controlling the radionuclide and biogenic barium deposition during isotope stages 5e and 1. The correction for sediment focusing makes the 'true' vertical paleoproductivity rates, deduced from the fluxes of proxy tracers like biogenic barium, much lower than previously estimated. Very low $^{230}\mathrm{Th}^0_{ex}$ concentrations and fluxes during isotope stage 6 were probably caused by rapid deposition of older resedimented material, delivered to the Weddell Sea continental slopes by the grounded ice shelves and by contemporaneous erosion of particles originating from the water column. (Auth. mod.)

Onken, R., **Spreading of lower circumpolar deep water in the Atlantic Ocean,** *Journal of physical oceanography,* Dec. 1995, 25(12), p.3051-3063, 45 refs.

A Stommel-Arons model of the circulation of Lower Circumpolar Deep Water (LCDW) in the Atlantic Ocean is presented and compared with observations. The LCDW is defined as a layer of uniform thickness over a flat bottom; the lateral boundaries are given by the 400 m isobath. The Drake Passage and the throughflow between Africa and Antarctica are closed. The model is forced by a concentrated source in the Weddell Sea representing the net Atlantic gain of LCDW due to production in the Weddell Sea and inflow through Drake Passage. This net gain is termed the LCDW formation rate. It is compensated by upwelling over the rest of the Atlantic. Best agreement with observed net transport rates in the western Atlantic was found using a LCDW formation rate of about 8 Sv ($Sv = 10^6 m^3/s$). The interior transport, the transport through topographic gaps, and the transport rates of western boundary currents on the eastern flanks of topographic barriers are calculated and compared with observations where available. (Auth. mod.)

Park, Y.H., Gambéroni, L., **Large-scale circulation and its variability in the south Indian Ocean from TOPEX/POSEIDON altimetry,** *Journal of geophysical research,* Dec. 15, 1995, 100(C12), p.24,911-24,929, 46 refs.

The first 18 months of altimeter data from the TOPEX/POSEIDON (T/P) mission were analyzed to study the large-scale mean surface circulation and its variability in the south Indian Ocean. A T/P sea level time series corrected for ocean tides was first validated against *in situ* sea level measurements from a bottom pressure recorder near Amsterdam I. A T/P-derived mean dynamic topography relative to the Ohio State University 91A geoid was compared to the output of the Fine Resolution Antarctic Model and to historical hydrographic data. The altimetric solution shows excellent agreement with the numerical model solution and indicates an anticyclonic subtropical gyre north of the Antarctic Circumpolar Current and two cyclonic subpolar gyres south of this current, respectively west and east of the Kerguelen Plateau. The western subpolar gyre corresponding to the eastern boundary of the Weddell Gyre appears to extend as far east as 60°E in the Weddell-Enderby Basin. However, the hydrography-derived dynamic topography does not reveal any clear evidence of these gyre features because of its inability to detect the barotropic component of currents. Finally, the T/P-derived sea level variability reveals clearly the well-known strong current-topography interaction in the southern ocean. (Auth. mod.)

Memorie,* 1994, Vol.51, Verso una nuova geografia delle terre polari: sintesi e prospettive. Atti del Convegno della Società Geografica Italiana, Roma, 21-22 Novembre 1991 (A new geography of the polar regions: synthesis and perspectives. Italian Geographical Society Conference, Rome, 21-22 November 1991. Proceedings). Edited by G. Orombelli, C. Smiraglia, and R. Terranova, p.291-305, In Italian with English summary. 15 refs.

DLC G17.S69

A wide area along the western continental shelf of the Ross Sea was investigated during the Italian oceanographic cruise of 1990-1991. Temperature and conductivity parameters of water samples collected from 30 hydrological stations at various depths were determined. Total, organic and inorganic amounts of particulate suspensions were established and dimensionally analyzed. Two markedly different hydrological conditions, regarding the water temperature and concentration of the suspended matter, were found close to the slope of the continental shelf. (Auth. mod.)

Davis, R.E., Killworth, P.D., Blundell, J.R., **Comparison of Autonomous Lagrangian Circulation Explorer and fine resolution antarctic model results in the South Atlantic,** *Journal of geophysical research,* Jan. 15, 1996, 101(C1), p.855-884, 43 refs.

The motions of eight Autonomous Lagrangian Circulation Explorer (ALACE) floats released near 750 m depth in Drake Passage and followed through the South Atlantic are described and compared with emulations made by advecting model floats through 12 monthly snapshots of velocity from the fine resolution antarctic model (FRAM). Both ALACEs and FRAM reproduce the major features of the general circulation as follows: strong intermediate depth flow in Drake Passage, bifurcation of the Antarctic Circumpolar Current (ACC) passing over the Falkland Plateau, a strong Falkland Current, its confluence with the Brazil Current, and moderate zonal flow across the South Atlantic. Eddy kinetic energy is much stronger in the observations than in FRAM. Float dispersion in both the model and observations is due primarily to mean shear. Initial RMS particle separation of 100 km grows to nearly 1000 km after 1 year, but most of this is associated with floats that take different paths of the general circulation. The observations indicate that eddy effects are particularly important near the Falkland-Brazil Current confluence in allowing Antarctic Intermediate Water to transfer from the ACC to the SAC, from which they may enter the subtropical gyre. Nicholls, K.W., **Temperature variability beneath Ronne Ice Shelf, Antarctica, from thermistor cables,** *Journal of geophysical research,* Jan. 15, 1996, 101(C1), p.1199-1210, 25 refs.

Thermistor cables have been deployed at two sites beneath Ronne Ice Shelf. One site is to the east of a submarine ridge that delineates the eastern boundary of the Ronne Depression, and the other is 100 km to the north, above the eastern slope of the depression. Long-term records from the cables (up to 22 months) indicate a large difference in the temperature variability at the two sites, being an order of magnitude greater in the Ronne Depression (site 2). The high variability in the site 2 record has allowed the construction of a simple descriptive model of the local oceanographic regime. Winter freezing in the open water north of the ice front generates Western Shelf Water (WSW), a type of High Salinity Shelf Water, which travels southwest beneath the ice shelf, appearing at site 2 as a slope-trapped current at the bottom of the water column. Site 2 is on the eastern slope of the depression where the wave-induced eastward motion forces Ice Shelf Water to rise, resulting in periodic ice-platelet formation in the water column, as surmised from conductivity-temperature-depth measurements at the site. The depth of the WSW layer decreased by 40 to 60 m during a 100-day period starting some 4 months after the beginning of the summer. (Auth. mod.)

Cripps, G.C., **Hydrocarbons in the antarctic marine environment: monitoring and background,** *International journal of environmental analytical chemistry,* 1994, Vol.55, p.3-13, 27 refs.

The antarctic marine ecosystem is proposed as an environment in which to monitor global hydrocarbon background levels. Hydrocarbon concentrations are probably uniform throughout the southern ocean and it is difficult to resolve low levels of contamination against this background. Indices for identifying anthropogenic hydrocarbons have been found to be ambiguous, but principal component analysis has successfully identified potentially polluted inshore waters. Hydrocarbon contamination in the Antarctic occurs only at a small number of coastal locations and is limited in extent. This paper is a review of the work on hydrocarbons in the southern ocean by the British Antarctic Survey in the Bransfield Strait and Scotia Sea regions. Analytical methods are discussed and a monitoring program is developed. (Auth.)

Bonn, W.J., **Biogenic opal and barium: indicators for late Quaternary changes in productivity at the antarctic continental margin, Atlantic sector** [Biogenopal und biogenes Barium als Indikatoren für spätquartäre Produktivitätsänderungen am antarktischen Kontinentalhang, atlantischer Sektor], *Berichte zur Polarforschung,* 1995, No.180, 186p., In German with English summary. Refs. p.100-110.

Sedimentological, geochemical (in particular biogenic content) and physical properties from the Weddell, Lazarev and Cosmonaut seas along the antarctic continental margin were analyzed in order to reconstruct the late Quaternary productivity and sedimentary processes of this region. Seven undisturbed sediment cores were chosen. The sediments represent a depositional period from 400,000 years to recent time. The late Quaternary climatic changes influence changes in the paleoenvironmental and the geological conditions, directly forced by the behavior of the antarctic ice sheet. All investigated cores are positioned within the oscillating ice sheet area and reflect the influence of the ice sheet in response to the climatic cycles. The results provide an indication that organic carbon content is a preservation signal and not a productivity signal. Carbonate is not correlated with biogenic opal and biogenic barium. (Auth. mod.)

D'Hondt, S., Arthur, M.A., **Late Cretaceous oceans and the cool tropic paradox,** *Science,* Mar. 29, 1996, 271(5257), p.1838-1841, 42 refs.

Oxygen isotopic proxies of paleo-sea surface temperatures (SSTs) suggest that Maastrichtian (about 66 mya) tropical SSTs were lower than those of today. They also demonstrate that Maastrichtian latitudinal SST gradients were much lower than those of the present. The low Maastrichtian SST gradients indicate that meridional heat transport was much greater or latitudinal differences in the balance of radiation to and from the sea surface were much less extreme during the latest Cretaceous than they are today, or that both conditions were true. These findings challenge traditional interpretations of "greenhouse" Late Cretaceous climates. The tropical oceanic temperatures are compared to those in the southern high latitudes during the same period, based on ODP and DSDP data.

Polzin, K.L., Speer, K.G., Toole, J.M., Schmitt, R.W., **Intense mixing of Antarctic Bottom Water in the equatorial Atlantic Ocean,** *Nature,* Mar. 7, 1996, 380(6569), p.54-57, 28 refs.

Presented in this report are direct measurements which quantify the processes of the AABW flowing from western basins of the mid-Atlantic Ridge through gaps in the ridge to renew the waters in the eastern basins. The flow is vertically sheared and exhibits remarkably intense turbulence, comparable to that seen at the ocean surface in the presence of winds of ca 10 m/s. This turbulence mixes the densest waters passing through the fracture zone with the warmer overlying waters, so that the coldest waters exiting this region have been warmed by ca 0.6°C during transit. Topographic obstructions and turbulent mixing together thus determine the properties of the flows renewing the deepest waters of the Atlantic Ocean's eastern basins. (Auth. mod.)

Yu, E.F., Francois, R., Bacon, M.P., **Similar rates of modern and last-glacial ocean thermohaline circulation inferred from radiochemical data,** *Nature,* Feb. 22, 1966, 379(6567), p.689-694, 53 refs.

Today, the ocean thermohaline circulation transports half of the ^{231}Pa produced by radioactive decay in the Atlantic Ocean water column to the southern ocean. This export respectively imparts low and high ^{231}Pa/^{230}Th ratios to the surface sediments of these oceans. Ocean sediments from the Last Glacial Maximum bear a similar isotopic fingerprint, implying that advection of North Atlantic Deep/Intermediate Water into the Circumpolar Deep Water of the southern ocean occurred at a similar—or slightly higher—rate during the last glacial period. (Auth.)

Diester-Haass, L., Zahn, R., **Eocene-Oligocene transition in the southern ocean: history of water mass circulation and biological productivity,** *Geology,* Feb. 1996, 24(2), p.163-166, 43 refs.

High-resolution records of carbon and oxygen isotopes and benthic foraminiferal accumulation rates for the Eocene-Oligocene section at Ocean Drilling Program Site 689 (Maud Rise, Weddell Sea; paleodepth about 1500 m) were used to infer variations in paleoproductivity in relation to changes in climate and ventilation of the deeper-water column. The benthic foraminiferal abundance and isotope records show short-term fluctuations at periodicities of 100 and 400 ka, implying orbitally driven climatic variations. Both records suggest that intermediate-depth water chemistry and primary productivity changed in response to climate. It is therefore inferred that, at this time, temperature fluctuations increased and a proto-polar front formed in conjunction with the first distinct pulsations in size of the antarctic ice sheet. This major change might have resulted from an initial opening of the Drake Passage at 37 Ma, at least for surface- and intermediate-water circulation. (Auth. mod.)

Fabiano, M., Povero, P., Danovaro, R., **Particulate organic matter composition in Terra Nova Bay (Ross Sea, Antarctica) during summer 1990,** *Antarctic science,* Mar. 1996, 8(1), p.7-13, Refs. p.12-13.

Particulate organic matter was collected in the coastal waters of Terra Nova Bay during the Oceanographic Campaign of the Italian Antarctic Research Programme in summer 1990. Particulate matter composition was analyzed for organic carbon and nitrogen, carbohydrates, proteins, lipids, nucleic acids (DNA and RNA) and ATP. A vertical stratification was evident in the study area, which resulted from prior melting of the pack ice. Suspended organic matter in the mixed layer and below the mixed layer differed in quantitative and qualitative composition. Except for ATP, all the biochemical components showed higher concentrations in the mixed layer than in the deeper waters. The particulate organic matter in Terra Nova Bay was mostly detrital and of algal origin. (Auth.)

Sato, T., Okano, K., Sawagaki, T., Enomoto, H., **Tidal displacement of sea ice observed at Nisi-no-ura Cove on East Ongul Island, Antarctica,** NIPR Symposium on Antarctic Geosciences, Proceedings, Tokyo, National Institute of Polar Research, Oct. 1995, p.43-48, 3 refs.

Vertical displacements of sea ice accompanied by the ocean tide were measured at Nishino-ura Cove on East Ongul I. and compared with the ocean tide observed by a pressure type tide gauge installed at the same cove. The displacements of sea ice were measured at two places which were respectively located at 20 m (P20M) and 60 m (P60M) offshore of bench mark BM No.1040. The displacement at P20M, where the sea ice is close to the fast ice, showed strong nonlinear behavior in both amplitude and phase compared with the ocean tide measured by the bottom-pressure gauge; the displacement at P60M was very consistent with the observed ocean tide. According to the 6 measurements made at P60M from May to Dec., 1993, the differences in amplitude are less than 5% as represented by the ratio of the displacement of the sea ice to the ocean tide. (Auth.)

Fulthorpe, C.S., Carter, R.M., Miller, K.G., Wilson, J., **Marshall Paraconformity: a mid-Oligocene record of inception of the Antarctic Circumpolar Current and coeval glacio-eustatic lowstand?,** *Marine and petroleum geology,* Feb. 1996, 13(1), p.61-77, 89 refs.

The sedimentary fill of the Canterbury Basin, New Zealand is the product of a long-term (80 Ma), tectonically controlled relative sea-level cycle. The condensed section of the megasequence, resolvable in detail in outcrop and on seismic profiles, comprises a basin-wide pelagic to hemipelagic limestone interval. A regional mid-Oligocene unconformity, the Marshall Paraconformity, lies within the limestone interval onshore and correlates with hiatuses in at least two, and possibly three, offshore exploration wells and with a temporary lithological change from limestone to quartz sand at a fourth. Strontium isotopic age estimates confirm that a 2-4 Ma hiatus is associated with onshore outcrops of the Marshall Paraconformity (between 32 and 29 Ma), which correlates with the opening of the Pacific sector of the southern ocean via the Antarctic Circumpolar Current and the postulated mid-Oligocene sea-level fall. Lowering of base level, coupled with cooling and enhancement of current activity, may have caused the temporary cessation of limestone deposition and a regional hiatus. This hypothesis reconciles the apparently contradictory palaeogeographical evidence for a regional highstand. (Auth. mod.)

Karl, D.M., Dore, J., Houlihan, T., Hebel, D., Asper, V., **Palmer LTER sediment trap array experiment: Initial results,** *Antarctic journal of the United States,* 1994, 29(5), p.222-224, 5 refs.

The continuous production of biogenic matter in the near-surface waters of the world ocean ultimately sustains the downward flux of particles at all ocean depths. As one component of the Palmer LTER program, the authors established three bottom-moored sequencing sediment traps within the central portion of Palmer Basin near Victor Hugo I. The particle flux results from the three separate sediment trap moorings display coherence in selected, broad features but also reveal significant differences in the details of the time-series data set; these results imply that the "growing season" is fairly short in these waters despite ample light and inorganic nutrients.

Vihma, T., **Atmosphere-surface interactions over polar oceans and heterogeneous surfaces,** *Finnish marine research,* 1995, No.264, p.3-41 + appends., Ph.D. thesis to be defended at the University of Helsinki. Refs. p.35-40. For papers included in the appendixes see 48-225 or 21F-49058, 49-2101 or 22J-51881, and 50-2110 or 22F-54128.

Processes of interaction between the atmospheric boundary layer and the planetary surface were studied with special emphasis on polar ocean surfaces: the open ocean, leads, polynyas and sea ice. The local exchange of momentum, heat and moisture were studied experimentally in the Weddell Sea and in the Greenland Sea. Exchange processes over heterogeneous surfaces are addressed by modelling studies. Over a homogeneous surface, the local turbulent fluxes can be reasonably well estimated using an iterative flux-profile scheme based on the Monin-Obukhov similarity theory. In the Greenland Sea, the near-surface air temperature and the generally small turbulent fluxes over the open ocean were affected by the sea surface temperature fronts. Over the sea ice cover in the Weddell Sea, the turbulent sensible heat flux was generally downwards, and together with an upward oceanic heat flux through the ice it compensated the heat loss from the surface via long-wave radiation. The sensible heat flux was typically from -15 to -20 W/m^2 in winter and -5 W/m^2 in summer. Over leads and coastal polynyas in the Weddell Sea, an upward heat loss from the Weddell Sea was 20-30 W/m^2. Ice motion in the Weddell Sea was found to be driven by the wind and the ocean current. The wind dominated on time scales of days, while the current became important on longer time scales. (Auth. mod.)

Frank, M., **Reconstruction of Late Quaternary environmental conditions applying the natural radionuclides ^{230}Th, ^{10}Be, ^{231}Pa, and ^{238}U: a study of deep-sea sediments from the eastern sector of the Antarctic Circumpolar Current System** [Rekonstruktion von spätquartären Umweltbedingungen mit dem natürlichen Radionukliden ^{230}Th, ^{10}Be, ^{231}Pa und ^{238}U: eine Untersuchung von Tiefseesedimenten aus dem östlichen Sektor des Antarktischen Zirkumpolarstromsystems], *Berichte zur Polarforschung,* 1996, No. 186, 136p., With German summary. Refs. p.83-95.

High resolution radioisotope and proxy element profiles were measured on five sediment cores forming a transect over the eastern part of the Atlantic sector of the Antarctic Circumpolar Current. The aim was to achieve a more detailed reconstruction of sedimentary and paleoenvironmental conditions of this key area for global climate change during the late Quaternary. Comprehensive previous stratigraphic work can mostly be corroborated by results of the ^{230}Th$_{ex}$ dating method, by which rough average sedimentation rates may be calculated. Assuming that the increased glacial dust flux released additional iron to the surface waters of the transect, the results obtained from the sediments of the Antarctic Zone suggest that a glacial fertilization by detrital input of iron, as recently discussed, was not the case. Altogether, a glacial increase in southern ocean productivity and thus a glacial southern ocean CO$_2$ sink seem to be rather unlikely, as previously deduced from other investigations. (Auth. mod.)

Agnew, D.C., **Ocean-load tides at the South Pole: a validation of recent ocean-tide models,** *Geophysical research letters,* Nov. 15, 1995, 22(22), p.3063-3066, 19 refs.

Small diurnal and semidiurnal gravity tides are seen at the South Pole because of the loading by and attraction of the ocean tides. These data provide a check on the quality of ocean-tide models, especially in the southernmost ocean, which has historically been the most lacking in tidal data. Ocean-tide models developed in the 1980s did not predict the gravity tides at this location very well. More recent models based on the Topex/Poseidon altimetric data and improved hydrodynamic modeling agree much better with the observations, provided that the tides beneath the ice shelves are included. The level of agreement at this remote location suggests that, loads from very local tides aside, the new generation of ocean-tide models can predict the loading tides to a very high accuracy. (Auth.)

Gerland, S., Richter, M., Villinger, H., Kuhn, G., **Non-destructive porosity determination of antarctic marine sediments derived from resistivity measurements with an inductive method,** *Marine geophysical researches,* Aug. 1993, 15(3), p.201-218, 21 refs.

The fractional porosity of marine sediments is one of the fundamental index properties of rocks. For the determination of porosity a nondestructive, inductive method was used on unsplit sediment cores from the Weddell Sea. The results were compared with galvanically measured resistivities using a miniature Wenner array on split cores. The measurements agree well except for cores with high clay content, where measurement frequency related effects cause a resistivity difference of about 10%. Porosities were derived from resistivities using a published resistivity-porosity relationship by Boyce (1968) and compared with sample porosities. A comparison of both data sets shows good agreement. (Auth. mod.)

Labeyrie, L., et al, **Hydrographic changes of the Southern Ocean (southeast Indian sector) over the last 230 kyr,** *Paleoceanography,* Feb. 1996, 11(1), p.57-76, Refs. p.74-76.

Hydrographical changes of the southern Indian Ocean over the last 230 kyr are reconstructed using a 17 m-long sediment core. The oxygen and carbon isotopic composition of planktonic and benthic foraminifera have been analyzed. Changes in sea surface temperatures (SST) are calculated using diatom and foraminiferal transfer functions. It is suggested that changes in deep water circulation are not the cause of the early response of the surface southern ocean to climatic changes, but that the early warming and cooling of the southern ocean result from at least two processes acting in different orbital bands and latitudes: seasonality modulated by obliquity affects the high-latitude ocean surface albedo (sea ice coverage) and heat transfer to and from the atmosphere, and low-latitude insolation modulated by precession influences directly the atmosphere dynamic and related precipitation/evaporation changes, which may significantly change heat transfer to the high southern latitudes, through their control on latitudinal distribution of the major frontal zones and on the conditions of intermediate and deep water formation. (Auth. mod.)

Sparrow, M.D., Heywood, K.J., Brown, J., Stevens, D.P., **Current structure of the south Indian Ocean,** *Journal of geophysical research,* Mar. 15, 1996, 101(C3), p.6377-6391, 44 refs.

Using recently published atlas data and the Fine Resolution Antarctic Model (FRAM), an investigation has been conducted into the structure of the frontal jets centered around the region of the islands of Crozet and Kerguelen in the south Indian Ocean. Geostrophic current velocities and transports were calculated from the temperature and salinity fields available from the atlas and compared with results from FRAM and previous studies. The authors identify the Agulhas Return Front (ARF) and the Subtropical Front (STF), as well as the following fronts of the Antarctic Circumpolar Current (ACC): the Subantarctic Front (SAF), the Polar Front (PF), and the Southern ACC Front (SACCF), from temperature and salinity characteristics and from geostrophic currents. This analysis of model and atlas data indicates that the jets associated with the ARF, STF, and SAF are topographically steered into a unique frontal system north of the islands, having some of the largest temperature and salinity gradients anywhere in the world ocean. The surface expression, carrying the bulk of the transport, is steered through the col in the Kerguelen Plateau south of the latitude normally associated with the PF at this meridian. On crossing the plateau it rejoins the subsurface expression. In the south, passing eastward along the margin of the antarctic continent and through the Princess Elizabeth Trough, a frontal jet is identified, believed to be the SACCF, placing the southern extent of the ACC in the region at 67°S. Döös, K., **Meridional circulation in the southern ocean and its**

seasonal variability as seen by the fine-resolution antarctic model, *Journal of geophysical research,* Mar. 15, 1996, 101(C3), p.6393-6407, 23 refs.

A fine-resolution primitive equation model is used to investigate the seasonal variability of the circumpolar interocean mass exchange via the southern ocean. The meridional overturning is calculated on both depth levels and density layers. The interocean mass exchange is estimated from the meridional stream functions in the different oceans. The annual average is found to be mainly governed by the thermohaline circulation in the so-called oceanic conveyor belt. The seasonal variability is mainly due to changes in the wind stress, which are not necessarily local. Simple relationships with the meridional Ekman transport, the meridional thermohaline transport, and the total interocean exchange of water masses are found among the three world oceans. The meridional stream function, simulated by an analytical model, shows that seasonal variability of the fine-resolution antarctic model is barotrophic and its baroclinic circulation is mainly stationary. Marova, N.A., **Antarctic bottom topography and its representation on new bathymetric charts** [Rel'ef dna Antarktiki i ego izobrazhenie na novykh batimetricheskikh kartakh], *Antarktika,* 1993, No.32, p.79-85, In Russian with English summary. 23 refs.

A new set of bathymetric maps has been compiled based on a summary and analysis of the data available on the bottom topography of the Antarctic. The principal patterns of morphostructures and their genesis are discussed on the basis of the concept of plate tectonics. The heterogeneity and complex character of the morphology of the mid-oceanic ridge surrounding Antarctica are demonstrated. The patterns of bottom topography in the northern parts of the Subantarctic basins are closely related to the relief of the mid-oceanic ridges. The well-defined continuous ring of the mid-oceanic ridges is considered the natural boundary of the Antarctic. A new antarctic bathymetric map is presented. (Auth.)

Sherman, J.W., III, **International oceanic satellites in the Global Ocean Observing System in support of polar science,** American Geophysical Union. 1993 Fall Meeting, Washington, D.C., 1993, 11p., 8 refs.

The international oceanic satellites offer a unique opportunity for numerous applications of remotely sensed data for polar science and operations. This paper will review the non-NOAA polar-orbiting sensors and satellites and their contributions to polar monitoring that are or soon will be operating in this decade. The merging of satellite observations, high-performance computers, and improved oceanic and marine meteorological models offers the first real opportunity to have a global ocean observing system. Improved surface programs offer the opportunity for high-quality data to be available for the computer models, and high-speed computers permit the models to be run in a useful time frame. These combined capabilities allow both operational and research oceanic and climatic needs to be met. Satisfying research needs takes on important new dimensions if the understanding of ocean climate and the long-term coupling of the ocean and atmosphere are to be goals of the Global Ocean Observing System support to the Global Climate Observing System. Diester-Haass, L., **Late Eocene-Oligocene paleoceanography in the southern Indian Ocean (ODP Site 744),** *Marine geology,* Feb. 1996, 130(1-2), p.99-119, 70 refs.

The Late Eocene through Oligocene changes in the paleoceanography of the southernmost Indian Ocean have been reconstructed by means of a coarse fraction analysis of closely spaced samples (20 cm = about 20 kyr) from ODP Site 744, Kerguelen Plateau. Surface water productivity, reconstructed from accumulation rates of opal skeletons and benthic foraminifers is low in the early Late Eocene, increases at about 36 Ma and shows a sharp increase to maximum values in the earliest Oligocene. Changes in bottom water mass chemistry have been deduced from the degree of carbonate dissolution and its relation to productivity proxies. It is suggested that a proto-antarctic bottom water (proto-AABW) and an overlying warm, saline deep water (WSDW) from low latitudes shifted vertically and latitudinally with time and exerted their influence on the sediments of Site 744. Proto-AABW is detected by means of strong carbonate dissolution when productivity is low. WSDW is detected by means of an excellent carbonate preservation despite high productivity. (Auth. mod.)

Kumar, N., **Trace metals and natural radionuclides as tracers of ocean productivity,** New York, Columbia University, 1994, 317p., University Microfilm order No. AADAA-I95-16132, Ph.D. thesis. Refs. passim.

Radionuclide and trace metal proxies are used to constrain the changes in bioproductivity in the South Atlantic sector of the southern ocean over glacial-interglacial timescales. The zone of maximum productivity in the South Atlantic region moved northward, from south of present-day position of the Antarctic Polar Front, to north of it during glacial periods. Increased Fe supply resulted in significant enhancement of export production in the subantarctic region of South Atlantic, consistent with the "Fe hypothesis". This increase in the subantarctic export production was sufficient to compensate for, and exceed, the decrease further south in the antarctic region. Thus, the net export production of organic carbon in the South Atlantic was higher during glacials, consistent with the "polar nutrient" hypothesis. (Auth. mod.)

Petschick, R., Kuhn, G., Gingele, F., **Clay mineral distribution in surface sediments of the South Atlantic: sources, transport, and relation to oceanography,** *Marine geology,* Mar. 1996, 130(3-4), p.203-229, 66 refs.

Surface samples, mostly from abyssal sediments of the South Atlantic, from parts of the equatorial Atlantic, and of the Antarctic Ocean, were investigated for clay content and clay mineral composition. Maps of relative clay mineral content were compiled, which improve on previous maps by showing more details, especially at high latitudes. Near submarine volcanoes of the Antarctic Ocean (South Sandwich, Bouvet I.) smectite contents exhibit distinct maxima, which is ascribed to the weathering of altered basalts and volcanic glasses. The illite distribution can be subdivided into five major zones including two maxima revealing both South African and antarctic sources. Particularly high amounts of Mg- and Fe-rich illites are observed close to East Antarctica. They are derived from biotite-bearing crystalline rocks and transported to the west by the East Antarctic Coastal Current. Chlorite and well-crystallized dioctaedral illite are typical minerals enriched within the Subantarctic and Polar Frontal Zone but of minor importance off East Antarctica. Kaolinite dominates the clay mineral assemblage at low latitudes, where the continental source rocks (West Africa, Brazil) are mainly affected by intensive chemical weathering. Surprisingly, a slight increase of kaolinite is observed in the Enderby Basin and near the Filchner-Ronne Ice Shelf. (Auth. mod.)

Boyle, E., **Deep water distillation,** *Nature,* Feb. 22, 1996, 37(6567), p.679-680, 14 refs.

By effectively distilling a particular pair of isotopes deep under the Atlantic, ocean circulation has recorded its own strength thousands of years into the past. This is the basic premise reported in the article by Yu et al. in this same issue of Nature. Among the consequences of the circulation of the North Atlantic Deep Water is the service it provides as a source of heat and salt for the antarctic southern ocean. Other main points of the Yu paper are noted by Boyle in this preview commentary.

Yu, E.F., Francois, R., Bacon, M.P., **Similar rates of modern and last-glacial ocean thermohaline circulation inferred from radiochemical data,** *Nature,* Feb. 22, 1996, 379(6567), p.689-694, 53 refs.

Today, the ocean thermohaline circulation transports half of the ^{231}Pa produced by radioactive decay in the Atlantic Ocean water column to the southern ocean. This export respectively imparts low and high ^{231}Pa/^{230}Th ratios to the surface sediments of these oceans. Ocean sediments from the Last Glacial Maximum bear a similar isotopic fingerprint, implying that advection of North Atlantic Deep/Intermediate Water into the Circumpolar Deep Water of the southern ocean occurred at a similar—or slightly higher—rate during the last glacial period. Ivchenko, V.O., Richards, K.J., Stevens, D.P., **Dynamics of the Antarctic Circumpolar Current,** *Journal of physical oceanography,* May 1996, 26(5), p.753-774, 37 refs.

The dynamics of the Antarctic Circumpolar Current (ACC) in a near-eddy-resolving model of the southern ocean (FRAM) are investigated. A streamwise coordinate system is used, rather than a more conventional approach of considering zonally averaged quantities. The motivation for this approach is the large deviation from a purely zonal flow made by the current. The total effect of transient eddies is to produce a drag on the mean flow, in contrast to the zonally averaged case. The vertical penetration of stress is considered. A generalized formula is derived for the interfacial form stress averaged along a convoluted path and that includes nonquasigeostrophic effects. The interfacial form stress is found to be related not only to the local wind stress but also to changes in stratification and the Coriolis parameter along the path of integration. Using the model data, the nonquasigeostrophic effects are found to be important, particularly toward the northern flank of the ACC. By relating the vertical shear of the flow to the interfacial form stress, it is shown that the vertical structure of the flow is set by a combination of wind stress and meridional overturning. There is, therefore, an intimate linking of the wind and thermohaline-driven circulations. (Auth. mod.)

Bono, R., Bruzzone, G., Caccia, M., Grassia, F., Spirandelli, E., Veruggio, G., **ROBY goes to Antarctica,** Oceans '94 Conference, Brest, France, Sep. 13-16, 1994. Proceedings. Vol.3, New York, Institute of Electrical and Electronics Engineers, 1994, p.III/621-III/625, 6 refs.

DLC TC1505.O33198 1994 Vol.3

The IX Italian Expedition 1993-94 of PNRA (Programma Nazionale di Richerche in Antartide) included the first experimental campaign in Antarctica in the field of underwater robotics. It can be described as a pilot mission to better define the role of this technology in future antarctic exploration. The work plan was as follows: to test and develop the CPR-IAN test-bed underwater prototype called ROBY; to verify requirements and constraints of the SARA (Sottomarino Autonomo Robotizzato Antarctica), an advanced antarctic AUV currently being designed by a consortium including CNR, ENEA, Tecnomare and others; and to help scientists collect oceanographic data. The results were satisfactory both from the technical and scientific points of view. ROBY worked well in all renditions and no electrical or mechanical problems arose from either the low temperatures or rough treatment involved in such harsh working conditions. Eighteen dives were performed at a maximum depth of 150 m for a total underwater working time of 20 hours. Most of the marine environments of Terra Nova Bay were explored and documented. Gasparoni, F., Busetto, G., Cucinotta, A., **Autonomous station for meteo-oceanographic data acquisition in Antarctica: prototype development and results from the first operative phase,** Oceans '94 Conference, Brest, France, Sep. 13-16, 1994. Proceedings. Vol.3, New York, Institute of Electrical and Electronics Engineers, 1994, p.III/626-III/630, 5 refs.

DLC TC1505.O33198 1994 Vol.3

In the early 90s the Italian National Antarctic Research Program promoted a study aimed at the definition of an advanced automatic station able to operate with one year autonomy in antarctic waters, allowing continuous collection of meteo-oceanographic data. The main results of the study were the demonstration of the feasibility of a concept based on a moored ice-resistent buoy able to allocate various instrumented modules, the definition of mission requirement and relevant sensing and electronic equipment, and the identification of the most significant installation sites. In order to verify the concept in real operative conditions, a prototype of the station was developed and installed in Antarctica during the 1993-94 Italian Expedition. The site chosen is in Terra Nova Bay approximately 30 km south of the Italian Base, in about 350 m water depth, and is characterized by the presence of a polynya. Once this first operative phase is completed, the station capabilities will be extended with the adoption of meteo-oceanographic sensors and other scientific packages. In the paper a description of the prototype station is given, and the results of the experimentation and data acquisition are presented and discussed. (Auth.)

Stoll, H.M., Schrag, D.P., **Evidence for glacial control of rapid sea level changes in the Early Cretaceous,** *Science,* June 21, 1996, 272(5269), p.1771-1774, 25 refs.

Lower Cretaceous bulk carbonate from deep sea sediments records sudden inputs of strontium resulting from the exposure of continental shelves. Strontium data from an interval spanning 7 million years in the Berriasian-Valanginian imply that global sea level fluctuated about 50 m over time scales of 200,000 to 500,000 years, which is in agreement with the Exxon sea level curve. Oxygen isotope measurements indicate that the growth of continental ice sheets caused these rapid sea level changes. If glaciation caused all the rapid sea level changes in the Cretaceous that are indicated by the Exxon curve, then an antarctic ice sheet may have existed despite overall climatic warmth. (Auth.)

p.242-248.

DLC QC145.A57 Vol.28 1996

This article reviews the history, formulation, and solution behavior of relatively comprehensive numerical models for the oceanic general circulation under equilibrium surface wind stress and buoyancy flux forcing. The solution features discussed here are the wind- and buoyancy-driven lateral gyres in enclosed basins, the mostly longitudinal currents near the equator and around Antarctica, the overturning circulations, the chemical property distributions, and both forced and spontaneous variations about the time-mean circulation occurring with both meso- and large-scale flow structures. (Auth. mod.)

Jeandel, C., Dupré, B., Lebaron, G., Monnin, C., Minster, J.F., **Longitudinal distributions of dissolved barium, silica and alkalinity in the western and southern Indian Ocean,** *Deep-sea research,* Jan. 1996, 43(1), p.1-31, Refs. p.19-21.

Dissolved Ba, Si and alkalinity contents are reported for 11 vertical profiles along a longitudinal section in the western and southern Indian Ocean, sampled during 1985-1987. Barium concentrations increase from 30 nmol/kg at the surface to 100 nmol/kg at depth in the southern ocean. Vertical variations result from mixing of water masses as well as biologically controlled uptake/regeneration processes. By means of a water-mass mixing model, the non-conservative Ba signal was determined and compared to that of silica. In the south, no release of Ba is observed in Circumpolar Deep Waters, whereas calculations show that Ba is somewhat supersaturated with respect to barite in the upper 3000 m of the southern waters. Thus, whereas surface Ba uptake is probably governed by the biological activity, Ba regeneration in deep waters appears to be controlled by saturation. Barium is correlated linearly with alkalinity at each station, but the slopes of the regression line vary by a factor greater than 2 along the section. (Auth. mod.)

Gille, S.T., Kelly, K.A., **Scales of spatial and temporal variability in the southern ocean,** *Journal of geophysical research,* Apr. 15, 1996, 101(C4), p.8759-8773, 38 refs.

Spatial and temporal variability in Geosat altimeter data are used to consider whether the Antarctic Circumpolar Current (ACC) responds on a large scale to global changes in wind forcing or whether its variability is primarily mesoscale. The Geosat data indicate a spatial decorrelation scale of 85 km and a temporal *e*-folding scale of 34 days. Using these scales to define autocovariance functions, the sea surface height variability is objectively mapped. The resulting maps indicate substantial evidence of mesoscale eddy activity. Over 17-day time intervals, meanders of the Polar Front and Subantarctic Front appear to elongate, break off as rings, and propagate. Statistical analysis of ACC variability from altimeter data is conducted using empirical orthogonal functions (EOFs). Neither complex nor extended EOFs indicate statistically significant traveling wave modes. (Auth. mod.)

Coles, V.J., McCartney, M.S., Olson, D.B., Smethie, W.M., Jr., **Changes in Antarctic Bottom Water properties in the western South Atlantic in the late 1980s,** *Journal of geophysical research,* Apr. 15, 1996, 101(C4), p.8957-8970, 44 refs.

Data collected in 1988-89 as part of the South Atlantic Ventilation Experiment have been combined with the historical database to study the circulation and water mass variability of the abyssal water in the Argentine Basin. A map of potential temperature at 4000 m used as an indication of geostrophic shear defines a south and western intensified crescent-shaped abyssal recirculation. Within this recirculation, and its northward extension to the Brazil Basin, Antarctic Bottom Water (AABW) properties have undergone two modifications during the 1980s: (1) the water mass cooled (0.05°C) and freshened (in salinity ratio) on surfaces of constant density; (2) the densest layer of AABW was altered to less dense water through mixing or advection out of the study area. This water mass change does not appear to have affected the flow pattern. It is suggested that open ocean convective events within the Weddell Sea contributed to the change in AABW documented here. (Auth. mod.)

Moriarty, D.J. W., O'Donohue, M.J., **Organic carbon transport from the southern ocean and bacterial growth in the antarctic intermediate water masses of the Tasman Sea,** *Marine ecology progress series,* Mar. 23, 1995, 119(1-3), p.291-297, 25 refs.

The concept that organic carbon is transported to the equatorial region at intermediate water depths from subantarctic frontal zones has been reinvestigated using the tritiated thymidine method to determine rates of bacterial DNA synthesis in water masses of the Tasman Sea. There was a higher bacterial growth rate and thus a higher flux of organic carbon through bacteria in the Antarctic Intermediate Water (900-1000 m depth) than in the water masses immediately above or below in the Tasman Sea east and south of Tasmania. Values for bacterial production were 4 to 8 micro-g C/m^3/d, which are equivalent to a consumption of about 3 to 6 µl O_2/l/yr. In the deeper layer at 1200 to 1500 m, rates were 3 to 4 times lower. These rates are compatible with other data on oxygen utilization. The results support the concept that organic matter sinks with downwelling water in the zone between the Subtropical Convergence and the Polar Front in the southern ocean and is advected towards the equator below the photic zone. (Auth.)

Melles, M., Kuhn, G., Fütterer, D.K., Meischner, D., **Processes of modern sedimentation in the southern Weddell Sea, Antarctica—evidence from surface sediments,** *Polarforschung,* 1994 (Pub. 1995), 64(2), p.45-74, 107 refs.

Seventy surface sediment samples from the continental shelf and slope of the southern Weddell Sea have been analyzed for grain-size distributions, chemical composition, mineral assemblages in the clay fraction, biogenic and terrigenous components in the coarse fraction, and stable isotope ratios in planktonic foraminifera. New information is presented on modern sedimentary processes and their dependence on the present-day physiographical, glaciological and hydrographical setting. The circulation of the water masses as reflected in the surface sediments differs in detail from that known from *in situ* measurements. Regional differences in both the biogenic production and the preservation of biogenic components are controlled by the physical and chemical properties of the water masses rather than by differences in the sea-ice coverage or in water depth. (Auth. mod.)

Jiang, L., Garwood, R.W., Jr., **Numerical study of three-dimensional dense bottom plumes on a Southern Ocean continental slope,** *Journal of geophysical research,* Sep. 15, 1995, 100(C9), p.18,471-18,488, 33 refs.

Three-dimensional features of dense bottom plumes flowing over continental shelf with or without along-slope topographic variations are investigated by simulating the evolution of a density front at a southern ocean continental shelf break, using a three-dimensional, primitive equation numerical model with a second-order turbulence closure scheme embedded. The focus of investigation is the role of topography in determining mixing and the offshore transport of dense shelf water during the transient adjustment process of a density front over a continental slope. The authors compare and discuss the numerical simulations for two cases: a uniform shelf and slope case and a case with a canyon that leads from the coast to the deep ocean crossing the shelf and the slope. The numerical simulations indicate that baroclinic instability, planetary rotation, bottom friction, and topography play major roles in determining the surface and bottom plume formation, the growth and penetration depth of the bottom plumes, and the characteristics of water mass on the slope. (Auth. mod.)

Figueiras, F.G., Pérez, F.F., **Ice-edge hydrography between Elephant I. and the South Orkneys, summer 1988-1989** [Hidrografía al borde del hielo entre las islas Elefante y las Orcadas del Sur durante el verano austral 1988-1989], Actas del tercer Symposium Español de Estudios Antárticos, Gredos, 3 al 5 de octubre de 1989. (Spanish Symposium on Antarctic Studies, 3rd, Gredos, Oct. 3-5, 1989. Proceedings). Edited by J. Castellví, Madrid, Comisión Interministerial de Ciencia y Tecnología, 1990, p.9-23, In Spanish with English summary. 19 refs.

DLC G845.S93

During the austral summer of 1988-89 the RV *Professor Siedlecki* made an oceanographic cruise along the ice edge between Elephant I. and the South Orkneys. The intention was to test the hypothesis of various authors that the melting of the pack-ice is responsible for primary productivity in antarctic waters. The results obtained during this cruise show that, in the region studied, it is the convergence of Scotia Sea and Weddell Sea waters which is responsible for the necessary stability in the photic zone. The stability is generated by a series of surface meanders of the Antarctic Circumpolar Current, which allow phytoplankton biomass to accumulate in the contact zone with Weddell Sea water. It is concluded that this situation has a typical frontal structure, with phytoplankton patches in the convergence between two water masses. In these circumstances, the contribution of ice melting, if any, remains unclear. (Auth. mod.)

DLC G845.S93

During the Polish-Spanish Antarctic Expedition on board the *Professor Siedlecki*, Dec. 26-27, 1988, sea water samples were taken in Admiralty Bay and analyzed for salinity, temperature, oxygen, pH, nitrate, silicate, organic carbon and chlorophyll. Results show that the surface water down to 20 m is poorer in nutrient salts than the sea water. The highest values of chlorophyll concentrations were found at 30 m depth. Below 75 m, a high concentration of organic carbon, low concentration of oxygen and increased silicate and nitrate concentrations suggest an area of remineralization.

Titus, J.G., Narayanan, V.K., **Probability of sea level rise,** Washington, D.C., U.S. Environmental Protection Agency, 1995, 186p., Numerous end-of-chapter refs.

DLC GC89.T57 1995

This report develops probability-based projections that can be added to local tide-gauge trends to estimate future sea level at particular locations. The key coefficients in these models are based on subjective probability distributions supplied by a cross-section of climatologists, oceanographers, and glaciologists. This report estimates that global temperatures are most likely to rise 1°C by the year 2050 and 2°C by the year 2100; that there is a 10% chance that temperatures will rise more than 4°C in the next century, and a 90% chance that they will rise by at least the 0.6°C warming of the last century. By contrast, IPCC (1992) estimated that a warming of 2.8°C was most likely. The temperature estimates are lower because (a) lower concentrations of carbon dioxide are assumed; (b) the cooling effects of sulfates and stratospheric ozone depletion are included; and (c) the panel of experts included a scientist who doubts that greenhouse gases will substantially increase global temperatures. Data from Greenland and antarctic ice sheets are included. (Auth. mod.)

Siple, P.A., **Antarctic geography,** Antarctica in the International Geophysical Year. Geophysical monograph no. 1, Washington, D.C., [American Geophysical Union], 1956, p.13-17, 1 ref.

Although currently two-fifths of this five million square-mile continent is yet to be seen for the first time, there is every likelihood that before the IGY draws to a close most of the major geographic discoveries will have been made. Concepts of the Antarctic Continent have gradually improved. The Continent appears to be a 'siamese-like' juncture of two large land masses. The portion lying mostly in the western hemisphere, conveniently designated West Antarctica, is only about half as large as East Antarctica. The latter is believed to be a massive Precambrian shield superimposed by a great dome of snow and ice, and toward its center reaching in excess of 13,000 feet elevation. The smaller West Antarctica is more folded in character and the ice dome near its center is probably less than 10,000 feet high. Where these land masses come in close contact, a high-faulted mountain forms a backbone to the whole continental mass. Between the continental glacial domes and these high mountains, natural troughs tend to channel katabatic surface winds off the Continent. During the forthcoming IGY, glacial and seismic programs will add greatly to the knowledge concerning the thickness of the ice cap and the surface beneath. (Auth. mod.)

Steineck, P.L., Thomas, E., **Latest Paleocene crisis in the deep sea: ostracode succession at Maud Rise, southern ocean,** *Geology,* July 1996, 24(7), p.583-586, 31 refs.

During the late Paleocene thermal maximum (ca. 55-50 Ma) mid-bathyal ostracodes at Maud Rise in the southern ocean (Ocean Drilling Program Site 689) underwent a sudden, dramatic turnover synchronous with a global extinction in deep-sea benthic foraminifers and with large-scale, short-lived negative excursions in the stable isotope record of foraminiferal calcite. A previously stable and long-lived ostracode assemblage was replaced within ≈10 k.y. by a taxonomically novel association of small, thin-walled opportunistic and generalist forms that persisted for ≈25-40 k.y. Thereafter, ostracode faunas recovered and common bathyal forms returned, although species were smaller and/or less-heavily calcified than before the turnover. Ostracode data are in agreement with the hypothesis that the latest Paleocene extinctions in the deep sea were caused by a change in the dominant source area of intermediate water mass from high altitudes to the subtropics. These data also suggest that warm saline waters persisted at Maud Rise for the next 100 k.y. (Auth. mod.)

Tseĭtlin, V.B., **Estimating the mean annual primary production and outflow of organic carbon in Antarctica** [Otsenka srednegodovykh velichin pervichnoĭ produktsii i eksportnogo potoka organicheskogo ugleroda v Antarktike], *Rossiĭskaia akademiia nauk. Doklady,* Nov. 1995, 345(3), p.401-403, In Russian. 13 refs.

The aim of this work was to estimate the mean annual values of primary productivity and, related to it, the outflow of organic carbon from the upper 100-m zone in the southern ocean. Data on seasonal variations in the biomass of antarctic zooplankton were used in the calculations. Assuming a section of the antarctic zone of the southern ocean equal to $38 \cdot 10^6$ km^2, its annual primary productivity is approximately $1.7 \cdot 10^9$ tC, while the organic flow is $0.29 \cdot 10^9$ tC. Rakusa-Suszczewski, S., **Hydrography of Admiralty Bay and its inlets, coves and lagoons (King George Island, Antarctica),** *Polish polar research,* 1995, 16(1-2), p.61-70, With Polish summary. Refs. p.68-70.

The environments of inlets, coves and lagoons vary widely. Climate warming has lead to retreat of glaciers directly entering the sea. In lagoons this is accompanied by exposure of an uncolonized substratum. Colonization processes in these lagoons appear to describe processes which have previously occurred in bays and fjords of glacial origin in the South Shetlands. A hydrographic map of Admiralty Bay and surrounding areas is included. (Auth.)

Lynch-Stieglitz, J., Van Geen, A., Fairbanks, R.G., **Interocean exchange of Glacial North Atlantic Intermediate Water: evidence from Subantarctic Cd/Ca and carbon isotope measurements,** *Paleoceanography,* Apr. 1996, 11(2), p.191-201, Refs. p.200-201.

New measurements of Cd/Ca ratios for glacial benthic foraminifera from the continental shelf and slope off Tasmania and South Australia are presented. When combined with glacial carbon isotope measurements, these data from the glacial Subantarctic Zone suggest that a water mass with a high value of the conservative tracer $\delta^{13}C_{as}$ occupied not only the shallow (1-2 km) portions of the Atlantic and Pacific Oceans but was present in the glacial Subantarctic as well. The oceanic Cd concentrations (Cd_w) predicted for the glacial Subantarctic are intermediate between those from the glacial Atlantic and the glacial Pacific, supporting the idea that Glacial North Atlantic Intermediate Water may have reached the intermediate depth Pacific via the Antarctic Circumpolar Circulation. Mackensen, A., Hubberten, H.W., Scheele, N., Schlitzer, R., **Decoupling $\delta^{13}C\Sigma CO_2$ and phosphate in recent Weddell Sea deep and bottom water: implications for glacial southern ocean paleoceanography,** *Paleoceanography,* Apr. 1996, 11(2), p.203-215, Refs. p.214-215.

On a section between 72°S and 42°S and a transect between 60°E and 10°E through the Weddell Sea and the southernmost eastern Atlantic Ocean, the water column was sampled on 72 stations and the stable carbon isotopic composition of total dissolved inorganic carbon ($\delta^{13}C\Sigma CO_2$) as well as the stable oxygen isotopic composition of seawater ($\delta^{18}O$) was determined. These data were compared with potential temperature, salinity, dissolved oxygen and phosphate data from the same stations. The observed $\delta^{13}C\Sigma CO_2/PO_4^{3-}$ relationship in the deep Weddell Sea strongly differs from the global Redfield-driven deep water relationship. The authors attribute this to enhanced thermodynamic fractionation at sites of bottom water formation that decouples the nutrient signal from the $\delta^{13}C\Sigma CO_2$ signal not only in surface and intermediate water masses but also in deep and bottom water. A discussion of simple hypotheses of Weddell Sea deep and bottom water formation during glacial times reveals that regardless of what scenario is considered, the thermodynamic imprint on southern ocean deep water would increase. Macdonald, A.M., Wunsch, C., **Estimate of global ocean circulation and heat fluxes,** *Nature,* Aug. 1, 1996, 382(6590), p.436-439, 36 refs.

Although ocean circulation and the consequent exchange of heat and gases with the atmosphere exert a strong influence on climate, discussions of global circulation have previously been highly schematic, non-quantitative and/or based upon mutually inconsistent regional studies. Presented here is a dynamically and kinematically consistent estimate of the magnitude and structure of global ocean circulation and its associated heat fluxes, derived by integrating hydrographic velocity data over the rapid spatial variations that they show. No single overturning cell is found, but instead a complex and probably time-varying circulation pattern. The simplest interpretation suggests that there are two nearly independent cells: one connecting overturning in the Atlantic Ocean to other basins through the southern ocean, and the other connecting the Indian and Pacific basins through the Indonesian archipelago. (Auth.)

Danabasoglu, G., McWilliams, J.C., **Sensitivity of the global circulation to parameterizations of mesoscale tracer transports,** *Journal of climate,* Dec. 1995, 8(12), p.2967-2987, 51 refs.

The isopycnal transport parameterization of Gent and McWilliams has been implemented in the GFDL ocean general circulation model, replacing the physically unjustifiable horizontal mixing of tracers. The effects of this parameterization are investigated in a global domain. A comparison of its results with those of the conventional horizontal diffusion shows substantial and significant improvements in several climatically important aspects of the ocean circulation. These improvements include a sharper main thermocline cooler abyssal ocean, elimination of the Deacon cell as a tracer transport agent, zonally integrated meridional heat transport and surface heat fluxes in better agreement with observations, and better confinement of the locations where deep convection occurs. The sensitivity of the model to the magnitude of the horizontal and isopycnal diffusion coefficients is also studied, showing that the domain averages of potential temperature and salinity, the mass transport of the Antarctic Circumpolar Current, and the meridional mass transport in the Northern Hemisphere all increase with decreasing diffusivity. Gràcia, E., et al, **Morphostructure and evolution of the central and eastern Bransfield Basins (NW Antarctic Peninsula),** *Marine geophysical researches,* June 1996, 18(2/4), p.429-448, 35 refs.

The Bransfield Basin is a narrow and elongated active rift basin located between the Antarctic Peninsula and the South Shetland Is. Six large volcanic edifices aligned with the basin axis stick out of the sedimented seafloor of the Central Bransfield Basin. In contrast, the Eastern Bransfield Basin is characterized by four deep troughs displaying a rhombic shape and small, scattered volcanic cones located in the southwestern half basin. Seamount volcanism plays an important role in the formation of new crust in the Bransfield Basin. Morphological analysis of the seamounts indicates a multi-staged volcano-tectonic construction. The distribution and shape of these edifices suggests that both volcanism and extension are concentrated at the same preferential areas through time. This might be related to the fracturation style of the continental crust. The Central and Eastern Bransfield Basins are very different in morphostructure, volcanism, and sedimentary cover. The Central Bransfield Basin shows evidence of NW-SE extensional faulting and focused active MORB-volcanism interpreted as result of incipient seafloor spreading. The Eastern Bransfield Basin is still in a rifting stage, mainly dominated by a NW-SE extension and some left-lateral strike-slip component probably related to the South Scotia Ridge. (Auth. mod.)

Rapier, C.B., Michael, K.J., **Calibration of a small, low-cost thermal infrared radiometer,** *Remote sensing of environment,* May 1996, 56(2), p.97-103, 11 refs.

Two Everest 4000A radiometers were used to measure sea surface temperatures in the southern ocean from the RSV *Aurora Australis* during the periods Aug. 7-Oct. 9, 1993 and Jan. 1-Mar. 1, 1994. On four separate occasions, the radiometers were calibrated under controlled laboratory conditions using a Thermos 60-L cooler, a cool room and a Contherm unit. The calibration results were best when the radiometers and calibration target were allowed to come to equilibrium at a set temperature, yielding r.m.s. differences of 0.1°C between the measured and actual target temperatures. When the radiometers were operated under conditions of rapid temperature change, the r.m.s. differences were found to be as large as 0.6°C. The bias error of the radiometers was found to have changed subsequent to each of their deployments in the southern ocean, which underlines the importance of monitoring changes in the offset of the radiometers in the field. Hughes, C.W., **Antarctic Circumpolar Current as a waveguide for Rossby waves,** *Journal of physical oceanography,* July 1996, 26(7), p.1375-1387, 30 refs.

Results from the Fine Resolution Antarctic Model suggest that much of the eddy activity in the southern ocean takes the form of eastward propagating wavelike structures, and there is evidence from altimetry that this may be true of the real southern ocean. In the model, eastward propagating waves in the core of the Antarctic Circumpolar Current (ACC) are separated by a sharp boundary from westward propagating waves to the north. The theory of Rossby wave interactions with a zonal barotropic current predicts complicated behavior involving the formation of strongly nonlinear critical layers associated with Reynolds stress divergences. The ACC is neither truly zonal nor barotropic, but diagnostic quantities suggested by the idealized models show similar dynamics occurring in this more complicated situation. This interaction between mean flow and Rossby waves may be crucial to understanding how the ACC interacts with bottom topography. (Auth.)

De Souza, R.B., **Study of the surface circulation to the north of Bransfield Strait, Antarctica** [Estudo da circulação superficial ao norte do Estreito de Bransfield, Antártica], São José dos Campos, Instituto Nacional de Pesquisas Espaciais, Nov. 1992, 161p., INPE-5742-TDI/503, Master's thesis. In Spanish with English summary. Refs. p.149-161.

A study of the mesoscale circulation to the north of Bransfield Strait using the displacement trajectory of a Brazilian drifting buoy, tracked by NOAA 10 and 11 satellites in 1989, is presented. Buoy positional data, together with *in situ* oceanographic and meteorological data, were used to obtain a detailed description of the surface current. With a mean velocity of 7.5 cm/s and a highly zonal direction, the current derived from the buoy trajectory was in great part forced by winds, in agreement with the Ekman model. The ARGOS-compatible Brazilian drifting buoy is shown to be an efficient tool in mesoscale studies, offering the possibility of delineating oceanic fronts, fluxes of water masses with known characteristics, and atmospheric and tidal influences on the surface currents. Results of such studies can be used as support to more complex studies in the areas of air-sea interaction, climatology, and distribution of planktonic organisms of economic interest. (Auth. mod.)

Mel'nikov, I.A., **Weddell-1 ice drift station in Antarctica,** *Oceanology,* Mar.-Apr. 1995, 35(2), p.286-288, Translated from Okeanologiia.

The Russian-U.S. Weddell-1 Expedition carried out investigations in the western Weddell Sea from Feb. through June 1992. The main goal of the expedition was to investigate the physical-oceanographic, meteorological and biological processes and the interactions in the water-ice-atmosphere system in this poorly studied region of Antarctica. The expedition was organized jointly by several U.S. universities supported by the National Science Foundation and by the former USSR State Committee on Hydrometeorology and the USSR Academy of Sciences, financially supported by the USSR State Committee on Science and Technology. A distinctive feature of the expedition was that it conducted its investigations on the sea ice rather than on board a research vessel. This drifting research station was the first in the history of studying Antarctica. (Auth. mod.)

Yang, T.Z., Zhao, J.S., Xu, J.P., **Water masses and circulation**

around the South Shetland Islands in summer, Zhongguo diyijie Nandayang kaocha xueshu taolunhui lunwen zhuanji (China Symposium on Southern Ocean Expedition, 1st, Hangzhou, May, 1988. Proceedings), Shanghai, Kexue jishu chubanshe (Shanghai Science and Technology Publisher), 1989, p.1-13, In Chinese with English summary. 13 refs.

DLC G845.5.C45 1989 Orien China

The hydrographic data presented were obtained during the First Chinese Southern Ocean Expedition in summer 1984-85; the water masses and circulation of waters adjacent to the South Shetland Is. are described. Results show that the waters in the Bellingshausen Sea consist of Antarctic Summer Surface Water, Antarctic Winter Water, Antarctic Circumpolar Deep Water and Antarctic Bottom Water. In the Bransfield Strait, the horizontal distribution of water masses can be roughly divided into the northern Bransfield Strait waters (Brs), the southern Bransfield Strait waters (Brw) and the Bransfield Strait central waters (Brc). Brs originates mainly from the surface water of the Bellingshausen Sea, whereas Brw is dominated by Weddell Sea water. Brc, which is a cold water mass with high salinity, is found mainly in the deep and bottom layers of the Strait. (Auth. mod.)

DLC G845.5.C45 1989 Orien China

Based on data obtained in waters around the South Shetland Is. from Dec. 26, 1984 to Feb. 12, 1985, an analysis was made of the relationship between krill abundance and the distribution of water temperature and salinity. Results show that in the Bellingshausen Sea, the water masses consist of 3 layers: the Antarctic Surface Water (0-50m), with high temperature and low salinity; the Subsurface Cold Water (50-200m), with lower temperature and higher salinity; and the Antarctic Circumpolar Water (200m to the maximum surveyed depth), with high temperature and high salinity. In the Bransfield Strait, features of mixed water were observed due to the influence of the Bellingshausen and Weddell seas. Krill was found to adapt to higher temperatures and lower salinity of the surface water; the subadult krill could survive in surface water with low temperature and high salinity; and krill larvae were observed in the subsurface and deep waters, below the water bodies with high temperature and low salinity.

Proceedings), Shanghai, Kexue jishu chubanshe (Shanghai Science and Technology Publisher), 1989, p.26-35, In Chinese with English summary. 6 refs.

DLC G845.5.C45 1989 Orien China

Oceanographic observations carried out in waters off Wilkes Land in the summer of 1985 revealed a deep-water area, a sharp continental slope, and a shallow continental-shelf area. All surface temperatures were found to be lowest in the southern portion of the surveyed area; surface salinity was low due to melted ice; and the oxygen content was high in the upper layer. The vertical structure of temperature and salinity is divided into 5 types: the upper homogenous layer, with high temperature and low salinity; seasonal thermohaline; winter residual water layer, with the lowest temperature readings; transient water layer, in which salinity and temperature increase with depth; and the bottom layer, with variable temperature and salinity values. Two current systems were observed: the Antarctic Circumpolar Current in the northern sector and a westward current in the southern portion of the surveyed area.

Proceedings), Shanghai, Kexue jishu chubanshe (Shanghai Science and Technology Publisher), 1989, p.36-41, In Chinese with English summary. 8 refs.

DLC G845.5.C45 1989 Orien China

Analysis of data collected during the First Chinese Southern Ocean Expedition shows small variability in water temperature, salinity and density in the surveyed area. Various types of fine structures caused by different processes, such as melting of surface ice, increase in temperature, wind occurrence, entrainment, bidiffusion or sinking due to mixing, all of them irreversible, were observed. The spectrum of vertical wave number for the temperature gradient shows, at all depths, a reversible fine structure caused by internal waves. (Auth. mod.)

Su, Y.F., **Relation between distribution of phytoplankton and sea water stability,** Zhongguo diyijie Nandayang kaocha xueshu taolunhui lunwen zhuanji (China Symposium on Southern Ocean Expedition, 1st, Hangzhou, May, 1988. Proceedings), Shanghai, Kexue jishu chubanshe (Shanghai Science and Technology Publisher), 1989, p.42-48, In Chinese with English summary. 2 refs.

DLC G845.5.C45 1989 Orien China

The water stability in the southern ocean, showing a stratification phenomenon in the structure of the water masses, is discussed. Understanding the distribution of the layer with maximal stability associated with the water masses, which represents a barrier restricting eddy diffusion and homogenization of hydrographic properties, was found helpful in the study of phytoplankton distribution. This is considered to be an important factor in the exploitation of marine biological resources.

DLC G845.5.C45 1989 Orien China

Analysis of data collected in the Bransfield Strait during the first Chinese antarctic expedition shows that the nutrient values are higher along the coast and decrease gradually seaward. The vertical distribution of nutrients reflects obvious spring layers. The regeneration of nutrients begins within these layers and extends to the bottom, at the continental shelf, and down to 500 m offshore. The maximum content of phosphate occurs at 300 m depth. The cycle of nutrients is completed through the convection of sea water during winter and by upwelling. These areas, rich in nutrients, show very high phytoplankton content. (Auth. mod.)

Proceedings), Shanghai, Kexue jishu chubanshe (Shanghai Science and Technology Publisher), 1989, p.119-125, In Chinese with English summary. 12 refs.

DLC G845.5.C45 1989 Orien China

Studies on concentrations of total mercury and inorganic mercury in waters to the northwest of the Antarctic Peninsula are presented. The changes of mercury in horizontal and vertical directions and the relations between concentration of mercury and nutrients are discussed. Mercury and phosphate are linearly related by the expression: total mercury (ng/L)=2.98 PO_4 -P(μg/L)-1.29 (r=0.89); organic mercury (ng/L)=3.37 PO_4 -Pu(μg/L)-3.95 (r=0.75); and inorganic mercury (ng/L)=1.47 PO_4 (μg/L)-0.79 (r=0.70). The effect of high concentrations of atmospheric mercury over the water is described. (Auth. mod.)

Espino, M., García, M., Puigdefábregas, J., Figa, J., Arcilla, A.S., **Numerical analysis of the wind-induced circulation in the Bransfield Strait (Antarctica) using ERS-1/WSC winds,** Workshop on ERS-1 Pilot Projects, 1st, Toledo, Spain, June 22-24, 1994. Proceedings, Paris, European Space Agency, Oct. 1994, p.37-40, ESA SP-365, 6 refs.

DLC QE33.2.A7W67 1994

One of the goals of the Pilot Project "Application of ERS-1 products to Geophysical Research in Antarctica" (PP2-E1) was to assess the characteristic wind-induced circulation patterns in the Bransfield Strait region during austral summer. From a data set corresponding to the period Dec. 1992 to Apr. 1993, 21 synoptic wind fields covering the study area were extracted. A simple method was established to interpolate the wind velocity and direction at error-flagged nodes and to reassess the wind direction where necessary. The directional distribution of the computed WSC (Weddell-Scotia Confluence) wind fields compares reasonably well with the few available local meteo statistics. On the other hand, the WSC winds exhibit a spatial variability which could not be resolved by local observations. Representative WSC wind fields have been selected and used to force a quasi-3D primitive equation finite element circulation model developed at LIM/UPC. (Auth. mod.)

Holby, O., Anderson, L.G., **Geochemistry in an area recently uncovered from the Filchner Ice Shelf,** *Continental shelf research,* Sep. 1996, 16(11), p.1479-1488, 23 refs.

Sediments were studied in the southern Weddell Sea that had been both covered by the ice shelf prior to 1986 (ICS) and outside the ice shelf. The composition of particulate matter in these sediments shows that the sedimentation under the ice shelf is quantitatively similar to that outside the ice shelf, except that the former has a negligible content of easily degradable organic matter, indicating a very low biochemical activity. The ^{210}Pb profile from the ICS station gave a sedimentation rate of 0.02 cm/y. This accumulation rate, combined with a particulate carbon content of approximately 1%, yields an annual net accumulation of 1.7 g C/m^2. The profiles of nutrients in the interstitial water (under the ice shelf) indicate a very small flux to the overlaying water. Outside the ice shelf the flux is significantly higher, though still small. (Auth. mod.)

Klepikov, A., **Southern ocean oceanography and models,** Advanced Study Institute on the Physics of Ice Covered Seas, Savonlinna, Finland, June 6-17, 1994. Selected papers, Savonlinna, 1994, var. p., 31 refs.

Recent analysis of data obtained in Jan.-Feb. 1988 in the eastern part of the Weddell Gyre by the mesoscale survey of three USSR research vessels showed a complicated hydrographic structure that results from the intensive interaction between the waters of the Weddell Gyre and Antarctic Circumpolar Current (ACC). Three types of mesocale features were found: warm-core eddies of circumpolar origin; warm-core eddies formed at the Weddell Front; and cold-core features from the Cold Regime of the Weddell Gyre. The inflow of the CDW into the gyre is facilitated by the sharp southward excursion of the ACC core at about 26°E due to the topographical constraint of the mid-ocean ridge. Intense warm-core eddies forming at the Antarctic Polar Front (APF) and drifting southward are visible in GEOSAT altimeter data as relatively high sea-level variability. This investigation was followed by using GEOSAT altimetry data and historical hydrographic data to estimate some characteristics of warm ACC rings in the sector 20-40°E. (Auth. mod.)

He, J.F., Chen, B., Huang, F.P., **Seasonal changes of chlorophyll *a* and oceanographic conditions under fast ice off Zhongshan Station, East Antarctica in 1992,** *Antarctic research (Chinese edition),* June 1996, 8(2), p.23-34, In Chinese with English summary. Refs. p.33-34.

Chlorophyll *a* concentrations under sea ice near Zhongshan Station, monitored from Apr. 12 to Dec. 30, 1992, were lower than 0.5 mg/m^3 during wintertime, and lowest (0.1 mg/m^3) from July to Sep. The concentrations began to rise during spring, and reached the maximum value of 21.40 mg/m^3 in mid-Dec. in surface water following the ice algal bloom, and then decreased quickly again. The ratios of nanoplankton (<20 µm) biomass to the total phytoplankton biomass were commonly higher than 50% in winter, but decreased following the increasing biomass in spring; the ratio in surface water was only 3.2% during the phytoplankton bloom. The nutrients were sufficient to support the growth of phytoplankton, but the concentrations decreased during spring. Comparison of phytoplankton of biomass in the water column and sea ice shows it to be less significant under the ice. Because the primary production is mostly distributed at the bottom of the ice and in the surface water, the role of ice-water interface in the ecosystem is considered to be very important. (Auth. mod.)

Kampel, M., De Costa, M.P., Hungria, C.S., Setzer, A.W., **Evaluation of image receptor APT/AVHRR for oceanographic studies in Antarctica** [Avaliação preliminar da utilização de um receptor de imagenes orbitais AVHRR/NOAA para estudos oceanográficos na Antártica], *Academia Brasileira de Ciencias. Anais,* 1993, Vol.3, Brazilian Remote Sensing Symposium, 7th, Curitiba, Brazil, May 10-14, 1993, p.56-59, In Portuguese with English summary. 9 refs.

DLC G70.5.B6S56 1993

A preliminary evaluation of image receptor APT of the AVHRR sensor was carried out during the 11th Brazilian antarctic expedition in order to estimate water surface temperature. Temperature data (bucket temperature and XBT) were collected and used to calibrate orbital data and monitor the ocean vertical structure. The image receptor showed a satisfactory operational performance. The use of temperature surface data obtained by satellite was limited by the presence of cloud cover. (Auth.)

Desideri, P.G., Lepri, L., Checchini, L., Santianni, D., Masi, F., Bao, M., **Organic compounds in antarctic sea-water and pack-ice,** *International journal of environmental analytical chemistry,* 1995, Vol.61, p.319-330, 17 refs.

Pack-ice and sea-water samples collected at different depths from Terra Nova Bay and Ross Sea during the 1990-91 Italian Antarctic Expedition were analyzed using HRGC and GC-MS. Several classes of biogenic and anthropogenic organic compounds were identified and measured in both matrices. The results showed the changes in the organic composition at varying depths of pack-ice and sea-water and the enrichment of organic compounds in the pack. (Auth.)

Pakulski, J.D., et al, **Iron stimulation of antarctic bacteria,** *Nature,* Sep. 12, 1996, 383(6596), p.133-134, 12 refs.

The experiment reported here entails the addition of $FeSO_4$ to the waters of Gerlache Strait during Oct. 1995. The iron enriched samples showed an approximately twofold increase in bacterial cell densities and a fourfold increase in specific growth at three different temperatures. Because the experiments were conducted in the dark and in the absence of bacterial grazers, the data suggest that the stimulatory effect resulted from the Fe enrichment. A caveat, however, is that the results and conclusion may be relevant only to the locale and season in which the experiments were carried on. Still, colleagues are urged to consider these results in future Fe experimentations.

Cai, W.J., Baines, P.G., **Interactions between thermohaline- and wind-driven circulations and their relevance to the dynamics of the Antarctic Circumpolar Current, in a coarse-resolution global ocean general circulation model,** *Journal of geophysical research,* June 15, 1996, 101(6C), p.14,073-14,093, 46 refs.

A series of experiments is described in which the ocean flow is driven by wind forcing only, thermohaline forcing only, or both. In a global ocean with topography, the circulation driven by wind alone is strongly influenced by contours of constant potential vorticity, which limit the barotropic transport to relatively small values. With the same geometry the flow driven by relaxing to observed surface temperature and salinity fields alone contains deep overturning circulation, producing NADW and AABW, and a large barotropic Antarctic Circumpolar Current (ACC) generated by bottom form stress. The ACC is dependent on the overturning circulation, the deep density field and the bottom form stress and increases with A_{TV}, the vertical mixing coefficient. If wind is added to this flow, the additional circulation is also dependent on the baroclinic structure but decreases with increasing A_{TV}. This applies especially to the ACC, where wind-induced additions are much larger than when the wind acts alone in a homogeneous ocean. An analysis of the dynamic balance of the ACC in the model shows that it is governed by lateral friction, bottom form stress, and wind. The mechanism for driving the ACC by deep convection and bottom topography is revealed in special experiments with simplified topography. (Auth. mod.)

McPhee, M.G., Ackley, S.F., **Antarctic Zone Flux Experiment,** *American Meteorological Society. Bulletin,* June 1996, 77(6), p.1221-1232, 39 refs.

Understanding what environmental conditions could again trigger widespread oceanic overturn may be an important key in determining the role of high latitudes in deep-ocean ventilation and global atmospheric warming. During the Antarctic Zone Flux Experiment in July and Aug. 1994, response of the Weddell Sea upper ocean and its ice cover to a series of storms was measured at two drifting stations supported by the National Science Foundation research icebreaker *Nathaniel B. Palmer.* This article describes the experiment, in which fluxes of heat, mass and momentum were measured in the upper ocean, sea ice and lower-atmospheric boundary layer. Initial results illustrate the importance of oceanic heat flux at the ice undersurface for determining the character of the sea ice cover. They also show how the heat flux depends both on high levels of turbulent mixing during intermittent storm events and on large variability in the stratified upper ocean below the mixed layer. DLC G70.5.B6S56 1993

A drifting buoy developed at INPE was launched north of the Bransfield Strait during the 7th Brazilian Antarctic Expedition. The buoy, tracked by NOAA satellites via the ARGOS System, remained at sea from Jan. 26 to Feb. 21, 1989. Using hydrographic data collected *in situ* by the Brazilian oceanographic support ship *Barão de Teffé,* the horizontal distributions of sea water temperature (T), salinity (S) and density were determined. By comparing the buoy's trajectory with the T, S and density distributions, it was noted that variations in the flow patterns measured by the buoy were caused by the presence of two oceanic fronts in the study area. From the results of this experiment, it is shown that the Brazilian drifting buoys tracked by the ARGOS System are suitable tools to detect and describe oceanic fronts on a synoptic basis. DLC G70.39.S55 1990

During the mid-1980s, INPE, through Project MEDICA (Medição da Corrente Antártica) developed and produced its first prototype drifting buoy, positioned by satellites in polar orbit via Service ARGOS in Brazil. The starting point of this new phase of national oceanographic instrumentation was directly connected to the development by INPE of a DCP (Data Collection Platform) and its subsequent certification by Service ARGOS. This work describes the evolution of this type of technology in Brazil during the past 6 years, as well as its performance in collecting oceanographic and meteorologic data, in both local and antarctic waters, in quasi real-time. The quality of data obtained from this Lagrangian system provided a strong background for the significant future participation of Brazilian oceanographers in international programs, such as TOGA and WOCE. These programs focus on studies of the climatological variability on a global scale, in which use will be made of numerical models of the weather, calibrated from data collected by movable platforms placed in remote regions of the ocean. Anais,* 1990, Vol.3, Brazilian Remote Sensing Symposium, 6th, Manaus, Brazil, June 24-29, 1990, p.561-569, With Portuguese summary. 11 refs.

DLC G70.39.S55 1990

Satellite-tracked drifting buoys offer the marine scientist a powerful tool for the direct measurement of surface currents, through the progressive displacement of these drifters with time. This study compares estimates of the surface current obtained from two Brazilian buoys with the indirect geostrophic circulation in the Bellingshausen Sea. Mean currents for the nearshore and offshore buoys were 13 cm/s toward 201° and 2 cm/s toward 101°, respectively, estimated from linear regression of the trajectories. Two maps of geostrophic circulation, one from the start of the experiment, the other from the end of it, were compared with the trajectories. Inspection of the buoy trajectories showed the presence of one or more eddies in the flow field, the largest one having a period of about 17 days. Eddy-like motion for the offshore trajectory contributed 33-38% to the overall trajectory, compared to 3-4% for the nearshore trajectory. Estimates of the energy due to eddy motion showed the offshore trajectory to contain 6-18 times more eddy motion than for the nearshore trajectory. (Auth.)

Sadarangani, S.H., Krishnamoorthy, T.M., Gopinath, D.V., **Tritium concentrations in surface waters of Indian Ocean and in lakes around Indian station Maitree in Antarctica,** *Indian journal of marine sciences,* Dec. 1995, 24(4), p.192-195, 18 refs.

DLC GC721.I48

Spatial distribution pattern of tritium in the surface waters of the Indian Ocean reveals a minima at the equator, a primary peak of about 15 TU between 30°S and 40°S and secondary peaks of about 10 TU between 50°S to 67°S latitudes. The asymetric nature of the tritium distribution pattern is discussed in relation to hydrographic characteristics of the region. Tritium concentrations in some fresh water samples collected near around Indian station Maitri are also presented. (Auth.)

Fieg, K., **Ocean as a part of the coupled climate system: an attempt to reconstruct the glacial circulation with different models of the atmosphere** [Der Ozean als Teil des gekoppelten Klimasystems: Versuch der Rekonstruktion der glazialen Zirkulation mit verschieden komplexen Atmosphärenkomponenten], *Berichte zur Polarforschung,* 1996, No.206, 128p., In German with English summary. 103 refs.

The goal of this thesis is to investigate the sensitivity of the Atlantic circulation to the surface forcing fields, e.g., wind stress, sea surface salinity (SSS) and sea surface temperatures (SST). Both the recent and the glacial Atlantic circulation are simulated and compared with ideas developed from drilling cores (glacial) and observations (modern). A model was developed for these elements and combined with models of other parameters. A set of experiments was devised to account for energy balance, sea ice distribution and drift, and varying degrees of sea surface salinity in antarctic waters. As various components of the models were shifted about through the experiments, in which some were omitted and others added, it became clear that a given set of paramaters could be successful for recent or glacial data, but not for both. (Auth. mod.)

Krupitsky, A., Kamenkovich, V.M., Naik, N., Cane, M.A., **Linear equivalent barotropic model of the Antarctic Circumpolar Current with realistic coastlines and bottom topography,** *Journal of physical oceanography,* Sep. 1996, 26(9), p.1803-1824, 45 refs.

A linear equivalent barotropic (EB) model is applied to study the effects of the bottom topography H and baroclinicity on the total transport and the position of the Antarctic Circumpolar Current (ACC). It is shown that the asymptotic behavior of the solution of the barotropic model (a particular case of the EB model) in the limit of very small bottom friction depends on subtle details of topography and basin geometry. The authors conclude that the barotropic model is not robust with respect to possible variations of model topography. The authors found that the EB model reproduces the position and the transport of the ACC reasonably well. The solution is robust with respect to uncertainties in H. The EB model is much improved by a parameterization of the bottom friction via near-bottom velocity, which tends to shut off the flow in the shallow regions. (Auth. mod.)

Hughes, C.W., Smithson, M.J., **Bottom pressure correlations in the south Atlantic,** *Geophysical research letters,* Aug. 15, 1996, 23(17), p.2243-2246, 14 refs.

Bottom pressure in the Fine Resolution Antarctic Model (FRAM) shows regions of the South Atlantic Ocean where fluctuations are dominated by small-scale internal variability of the currents, and are not directly related to the wind. There are often very sharp boundaries between these regions and regions of large scale coherence. Bearing this in mind, the measured coherence of bottom pressure recorder (BPR) measurements near Tristan da Cunha island in the South Atlantic is taken as evidence that mesoscale variability associated with the Antarctic Circumpolar Current reaches further north in the model than in reality. There are many possible reasons for this, but the significant result is that the BPR measurements can provide useful information about the dynamical regime of the deep ocean, which can not be discovered by surface measurements. (Auth. mod.)

Meredith, M.P., Van Scoy, K.A., Watson, A.J., Locarnini, R.A., **On the use of carbon tetrachloride as a transient tracer of Weddell Sea deep and bottom waters,** *Geophysical research letters,* Oct. 15, 1996, 23(21), p.2943-2946, 22 refs.

Antarctic bottom waters have long been known to be a mixture of Circumpolar Deep Water and Shelf Water. Recent observations show that in the antarctic bottom waters of the Scotia Sea and northern Weddell Sea, the ratios of carbon tetrachloride (CCl_4) to chlorofluorocarbons (CFC-11, 12) are inconsistent with the ratios observed in the surface layer of the Weddell Sea. This is the result of a deficit of CCl_4 in the bottom waters, and renders the compound unsuitable for use as a transient tracer from which apparent ages can be derived directly. The summer near-surface temperature minimum of Antarctic Surface Water exhibits a similar inconsistency, demonstrating that CCl_4 can be removed from cold waters with high oxygen levels, probably through a biological process. It is inferred that Shelf Water features a similar CCl_4 deficit which is transferred to the new antarctic bottom waters upon formation, accounting for the observed deep CCl_4 deficit. (Auth. mod.)

Jacobs, G.A., Mitchell, J.L., **Ocean circulation variations associated with the Antarctic Circumpolar Wave,** *Geophysical research letters,* Oct. 15, 1996, 23(21), p.2947-2950, 12 refs.

Altimeter data analysis indicates persistent sea surface height (SSH) anomalies propagating eastward about the antarctic continent. The spatial and temporal characteristics match variations in the atmosphere and sea surface temperature (SST) that are associated with the Antarctic Circumpolar Wave (ACW). During the observation time period, the SSH appears quasiperiodic with a dominant 4 year period and 180° longitude wavelength. Thus, the SSH signature of the ACW appears as two anomalies on opposite sides of the antarctic continent propagating eastward at 10 cm/s. The SSH response to observed wind forcing agrees in terms of amplitude and phase with simple quasigeostrophic dynamics. (Auth. mod.)

Koshliakov, M.N., Sazhina, T.G., **Meridional volume and heat transport by large-scale geostrophic currents in the Pacific sector of the Antarctic,** *Oceanology,* June 1996, 35(6), p.767-777, Translated from Okeanologiia. 12 refs.

Hydrophysical and current data measurements by an acoustic doppler current meter were obtained in 1992, along 67°S in the Pacific Sector of the Antarctic, and were analyzed for the purpose of estimating the meridional volume and heat transports connected with large-scale geostrophic currents. Large-scale components of all initial hydrophysical fields were obtained by optimal smoothing of these fields along the section. The obtained pattern of geostrophic currents, involves boundary currents at the antarctic continental slope, the volume transports of which were also estimated. The heat transport connected with the barotropic component of this pattern is not representative climatically, because of the instability of this component. The baroclinic mode of the distribution of geostrophic currents includes a vertical component of water circulation, averaged over the section, with currents toward the antarctic continent in the upper part of the ocean and in the opposite direction in the lower part. This mode of currents provides integral heat transport toward the antarctic continent that can be treated as a possible mechanism for the compensation of the annual heat flux from the ocean to the atmosphere in this region. Ohshima, K.I., Takizawa, T., Ushio, S., Kawamura, T., **Seasonal variations of the antarctic coastal ocean in the vicinity of Lützow-Holm Bay,** *Journal of geophysical research,* Sep. 15, 1996, 101(C9), p.20,617-20,628, 23 refs.

During the period of 1990-1992, year-round oceanographic observations were conducted in the vicinity of Lützow-Holm Bay, East Antarctica. It was found that the thickness of the Winter Water (WW) layer, characterized by a cold fresh oxygen-rich water, exhibits its maximum in the austral fall (typically 500 m) and its minimum in the austral summer (typically 350-400 m). The associated density variation of the water column explains only about one third of the seasonal variations in sea level at the coast, which suggests a large seasonal variation in barotropic coastal flow. Prominent freshening occurs in the WW layer during fall. This appears to be caused by the accumulation of WW, whose upper portion is freshened in the preceding summer. These seasonal variations appear to occur every year. The authors propose that the seasonal variation in the WW layer is caused by the seasonal variation in the wind over the coastal ocean. (Auth. mod.)

Meredith, M.P., Vassie, J.M., Heywood, K.J., Spencer, R., **On the temporal variability of the transport through Drake Passage,** *Journal of geophysical research,* Oct. 15, 1996, 101(C10), p.22,485-22,494, 22 refs.

A recently obtained series of bottom pressure measurements from various positions in the Drake Passage (DP) has been used to estimate the transport variability of the Antarctic Circumpolar Current (ACC). The standard deviations in derived transport range from 5.3 Sv in 1993 to 8.9 Sv in 1990. These data suggest that the ACC transport can be persistently less variable over several years than was previously thought. In particular, the International Southern Ocean Studies (ISOS) data set contains two large-amplitude changes in pressure difference over timescales less than 2 weeks, while no similar events were observed in the more recent data. Although the more recent pressure gauges were deployed at different positions to those used in ISOS, their reliability as indicators of ACC transport changes has been established by examination of simultaneous pressure measurements within DP. Sakai, K., Peltier, W.R., **Multibasin reduced model of the global thermohaline circulation: paleoceanographic analyses of the origins of ice-age climate variability,** *Journal of geophysical research,* Oct. 15, 1996, 101(C10), p.22,535-22,562, 44 refs.

A new, multibasin reduced model of the global thermohaline circulation has been developed that builds upon the single-basin Atlantic model recently described in Sakai and Peltier [1995]. The model comprises individual, two-dimensional, Atlantic, Indian, and Pacific components which are linked via a circumpolar basin representative of the southern ocean. It also includes a complete seasonal cycle for sea surface temperature, a sea ice component, and an acceptably accurate representation of the influence of both wind stress and bottom topography. The circulation in the individual basins is described using a stretched coordinate system in order to allow the use of reduced vertical resolution where high resolution is unnecessary. The authors also describe a sequence of paleoceanographic experiments that have been designed to explore the sensitivity of the deep circulation to the impact of the specific surface freshwater anomalies that are known to have developed during the last deglaciation event of the current ice age. The simulation of the response of the thermohaline circulation to such anomalies provides strong additional support for the notion that modulation of the strength of the overturning flow in the Atlantic basin played a very important role in the Younger-Dryas climate reversal. (Auth. mod.)

Nicholls, K.W., **Analysis of a 22-month thermistor cable record from the ocean beneath Site 2, Ronne Ice Shelf,** Filchner-Ronne Ice Shelf Programme (FRISP), Report No.9 (1995), compiled by H. Oerter, Bremerhaven, Alfred-Wegener-Institute for Polar and Marine Research, 1995, p.80-86, 3 refs.

DLC G890.F55.R47

During the austral summer of 1991-92 a hot-water drill was used to create an access hole at Site 2, Ronne Ice Shelf. The ice was found to be 541 m thick, overlying a water column about 380 m deep. Using oceanographic probes lowered into the water via the access hole a sequence of CTD profiles were made, and several water samples were retrieved. At the end of the measurement period thermistor cables were lowered into the borehole and allowed to freeze in place. One of the cables extended to within 40 m of the sea floor, with thermistors spaced at approximately 35 m intervals through the water column. It is the analysis of a 22-month record from this cable that is the subject of this report. By comparing the thermistor cable results with the temperature profiles from the CTD measurements it seems that the worst affected thermistor was the deepest, suffering a shift equivalent to 0.10°C. In this report the authors are concerned more with the temperature variability than the absolute values.

Ichii, T., Naganobu, M., **Surface water circulation in krill fishing areas near the South Shetland Islands,** *CCAMLR Science,* 1996, Vol.3, Scientific Committee and the Commission for the Conservation of Antarctic Marine Living Resources. Journal. Edited by E. Sabourenkov, p.125-136, With French, Russian and Spanish summaries. Refs. p.129-130.

This paper describes tracks followed by 6 surface drifting buoys that were deployed in shelf and oceanic waters to the north of the South Shetland Is. Based on buoy tracks, the surface circulation to the north of the South Shetlands shelf was described as a slow sluggish southwest current with a series of small-scale circular and semi-circular flows in the shelf region, whereas the circulation in the oceanic region was described as the strong northeast current. The picture obtained of the surface circulation was considered in conjunction with the distribution of krill catches taken in the area by Japanese vessels during the period from 1981 to 1994. It is suggested that the sluggish and shear currents observed to the north of the islands may have properties which contribute to the formation of stable krill concentrations in the area. The observed long-distance movements of three buoys also suggested that oceanic currents may transport krill from the South Shetland Is. to South Georgia and the South Orkney Is. on a time scale of 110 to 120 and 85 days respectively. Alverson, K., Owens, W.B., **Topographic preconditions of**

open-ocean deep convection, *Journal of physical oceanography,* Oct. 1996, 26(10), p.2196-2213, 25 refs.

Evidence for oceanic convection over Maud Rise in the Weddell Sea suggests that bottom topography may select the location and scale of deep convecting oceanic chimneys forced by seasonal large-scale atmospheric cooling. In this paper, the role of bottom topography in open-ocean deep convection is studied using an idealized three-dimensional primitive equation model. A barotropic mean flow impinges on a Gaussian-shaped seamount in a stratified domain generating a Taylor cap (a region of topographically trapped fluid). Convection within this region is significantly enhanced relative to ambient levels away from the seamount and to similar numerical simulations performed without bottom topography. An analytic formula for one-dimensional nonpenetrative convection into an exponential stratification profile is derived and compares well with results from the numerical model. Parameter dependencies for these topographic preconditioning mechanisms are discussed. These numerical results suggest that bottom topography can play an important role in selecting the location and horizontal scale of deep convection in the ocean. (Auth. mod.)

Warren, B.A., LaCasce, J.H., Robbins, P.E., **On the obscurantist physics of "form drag" in theorizing about the Circumpolar Current,** *Journal of physical oceanography,* Oct. 1996, 26(10), p.2297-2301, 30 refs.

The authors point out that, since the "form-drag" force balance commonly advanced for the Antarctic Circumpolar Current is really just a statement that northward Ekman transport in the circumpolar Drake Passage zone is compensated by deep southward geostrophic flow, the balance is actually irrelevant to the magnitude of the current itself. It is thus misleading to ascribe a role to form drag in its physics. Sverdrup dynamics seems to offer a more promising analysis of the real Circumpolar Current—as proposed long ago. (Auth.)

Jaeger, J.M., Nittrouer, C.A., DeMaster, D.J., Kelchner, C., Dunbar, R.B., **Lateral transport of settling particles in the Ross Sea and implications for the fate of biogenic material,** *Journal of geophysical research,* Aug. 15, 1996, 101(C8), p.18,479-18,488, 24 refs.

The Ross Sea with its high rates of primary productivity and biogenic accumulation, provides an important location to test the validity of a one-dimensional particle-settling model. As part of an interdisciplinary field project performed from 1990 to 1992 to examine cycling and accumulation of biogenic matter in the Ross Sea, water-column particulate and current data were collected at three sites. At each site, a current meter and sediment trap were placed 240 m below the water surface, and at 40 m above the seabed. The moorings were deployed for 1- to 2-years duration. The current-meter records showed that the speed of flow in the southwestern Ross Sea is relatively slow and current direction is highly variable. Currents in the south-central Ross Sea have moderate speeds and less directional variability. The northwestern Ross Sea has the strongest flows and least variability in direction. Two models were developed to determine the net displacement of particles settling through the water column. One model evaluated vertical particle advection and the second estimated lateral particle advection. The pattern in displacement trends correlates well with observed sediment types and accumulation rates at each site. A one-dimensional model for the settling of biogenic material is most applicable at the southwestern site and least applicable at the northwestern site. (Auth. mod.)

DeMaster, D.J., Ragueneau, O., Nittrouer, C.A., **Preservation efficiencies and accumulation rates for biogenic silica and organic C, N, and P in high-latitude sediments: the Ross Sea,** *Journal of geophysical research,* Aug. 15, 1996, 101(C8), p.18,501-18,518, Refs. p.18,516-18,518.

Rates of biogenic sediment accumulation (biogenic silica and organic C, N, and P) and pore water flux have been established for a variety of depositional environments in the Ross Sea. On the basis of ^{14}C measurements in kasten cores, sediment accumulation rates ranged from 250 cm/kyr in the coastal basin of Granite Harbor to 1-2 cm/kyr in the shelf and slope environments of the northern and eastern Ross Sea. The preferential preservation of biogenic silica relative to organic carbon was apparent in Ross Sea sediments because the biogenic silica/organic carbon ratio in the material buried in the seabed generally was 2 times greater than the ratio in sediment particles arriving at the sediment-water interface. The total amount of biogenic silica accumulating on the Ross Sea shelf is approximately an order of magnitude less than the Ledford- Hoffman et al. [1986] estimate that was based on ^{210}Pb chronologies. Biogenic silica accumulation rates in the southern, central, and western Ross Sea increased during the mid and late Holocene, reaching their maximum values during the past 500 to 1000 years. (Auth. mod.)

Nelson, D.M., DeMaster, D.J., Dunbar, R.B., Smith, W.O., Jr., **Cycling of organic carbon and biogenic silica in the southern ocean: estimates of water column and sedimentary fluxes on the Ross Sea continental shelf,** *Journal of geophysical research,* Aug. 15, 1996, 101(C8), p.18,519-18,532, Refs. p.18,530-18,532.

The authors examined the cycling of organic carbon and biogenic silica in the water column and upper sediments of the Ross Sea, seeking to understand the processes leading to the formation of opal-rich, organic-poor sediments over much of the southern ocean. Between Jan., 1990 and Dec., 1994 three cruises were conducted to measure rates of primary production, nitrate-based "new" production, biogenic silica production and biogenic silica dissolution in the upper 50 m over most of the Ross Sea shelf in spring, mid summer and late summer. They deployed sediment traps from Jan., 1990 to early Mar., 1992 to measure the mid-water (250 m) and near-bottom gravitational fluxes of particulate organic carbon, nitrogen and biogenic silica year-round at three sites, and obtained sediment cores at 15 sites to assess the accumulation rates of organic carbon and biogenic silica in all known sediment regimes on the shelf. These data permit estimates of the annual production, near-surface recycling, vertical sinking flux, delivery to the seabed, benthic regeneration and long-term burial of both organic and siliceous material integrated over 75-80% of the Ross Sea shelf. The resulting annual budgets for carbon and silica indicate highly selective preservation of biogenic silica over organic carbon between 50 and 250 m in the water column, as well as in the upper seabed. Both silica preservation and the decoupling between the cycles of silica and carbon must be even more effective in the waters overlying abyssal southern ocean sediments than they are over the Ross Sea shelf. (Auth. mod.)

J-56189

Whitehouse, M.J., Priddle, J., Trathan, P.N., Brandon, M.A., **Substantial open-ocean phytoplankton blooms to the north of South Georgia, South Atlantic, during summer 1994,** *Marine ecology progress series,* Sep. 12, 1996, 140(1-3), p.187-197, Refs. p.196-197.

Substantial open-ocean phytoplankton blooms in the Antarctic Zone to the northwest of South Georgia, South Atlantic are described. Chlorophyll *a*, nutrient and physical oceanography data, collected Jan. 2-5 and Feb. 2-4, 1994 along a 450 km transect comprising 14 stations, are presented. The transect crossed the Subantarctic and the Polar Front (PF). During the Jan. transect survey, in 2 locations to the south of the PF, average surface mixed-layer chlorophyll *a* concentrations were >8 and >13 mg/m^3, and were associated with silicate, nitrate and phosphate depletions (<2.0, <11.0 and 1.0 mmol/m^3 respectively), and nitrite and ammonium enhancement (>0.3 and >1.4 mmol/m^3 respectively). One of the phytoplankton blooms was associated with the nearby PF, but the origin of a bloom further south, well within the Antarctic Zone, was not clear. Phytoplankton production predicted by nutrient drawndown was far greater than the observed biomass on both surveys. (Auth. mod.)

McPhee, M.G., **Turbulent oceanic heat flux during winter in the central Weddell Sea,** Conference on Polar Meteorology and Oceanography, 4th, Dallas, TX, Jan. 15-20, 1995. Preprints, Boston, American Meteorological Society, 1995, p.214-217, 7 refs.

During July and Aug. of 1994, the Antarctic Zone Flux Experiment (ANZFLUX) was executed from the National Science Foundation research icebreaker *Nathaniel B. Palmer,* in the Weddell Sea. The main thrust of the experiment was measuring fluxes of momentum, heat, salt and other properties in the upper ocean in at least two locations in the cyclonic gyre that dominates the circulation of the central Weddell. Understanding what maintains the present wintertime flux regime in the Weddell may be an important link in tracing how the abyssal ocean interacts with the rest of the climate system.

Alvarez de Meneses, A., Escanez, J.E., **Study of some oceanographic parameters from the "Antártida 8611" expedition** [Estudio de algunos parámetros oceanográficos de la campaña Antártida 8611], IV Seminario de Química Marina. Cádiz, Jan. 28-29, 1988. Edited by A. Gómez Parra and J. López Ruiz, Cádiz, Universidad de Cádiz, 1988, p.159-168, In Spanish with English summary. 10 refs.

DLC GC10.S46a.4 1988

During the austral summer (Nov. 1986-Feb. 1987), the cruise "Antártida 8611" was carried out in the Scotia Sea and Brandfield Strait. Fifty deep-sampling hydrographic stations were studied for different physico-chemical parameters and dissolved micronutrients down to 500 m depth. Some additional hydrographic data from areas such as Shag Rocks, South Georgia, South Sandwich Is., South Orkneys Is. and Deception I. are given. (Auth. mod.)

Savidge, G., et al, **Assessment of the role of the marginal ice zone in the carbon cycle of the Southern Ocean,** *Antarctic science,* Dec. 1996, 8(4), p.349-358, Refs. p.357-358.

The dense phytoplankton blooms observed in earlier studies in the southern ocean Marginal Ice Zone (MIZ) may not be representative of all regions, so that some previous assessments of the overall importance of this system in total primary production may have been overestimated. Recent observations have shown that increased phytoplankton production may not always be associated with the retreating ice-edge, due to the unpredictability of meltwater-induced stability. Complex interactions between the MIZ and hydrographic fronts have also been indicated. A range of simple simulations, based on biomass inventories for the major biogeochemical systems in the southern ocean, show that the greater part of chlorophyll biomass is located in the extensive regions between the major fronts. Consideration of the fronts and the MIZ only, which the authors surmize may be the principal sites of export production, indicates that the MIZ is clearly the most important single feature. Even if the occurrence of MIZ blooms in the simulations is reduced dramatically, such blooms still appear to make a substantial contribution to production and, by implication, carbon export. (Auth.)

Piola, A.R., Grasselli, M.B., **Medium-scale heat fluxes across the Antarctic Circumpolar Current in the Drake Passage and western Scotia Sea,** *Antarctic science,* Dec. 1996, 8(4), p.369-378, Refs. p.377-378.

Closely spaced continuous temperature profiles from expendable bathythermographs launched along two sections across the Drake Passage and western Scotia Sea in the summer 1981-82 are used to examine the vertical medium-scale (ca. 10-100 m) temperature fine structure. The large-scale temperature structure across the frontal regimes characteristic of the Antarctic Circumpolar Current and the cross-frontal structure of the upper ocean are discussed. In the Drake Passage the heat content drops about 0.5×10^2 Kcal/cm^2 across the Subantarctic Zone and 0.9×10^2 Kcal/cm^2 across the Polar Front. In the Scotia Sea the heat content changes across the front are not as prominent. The statistical model of Joyce (1977) is used to quantify the heat fluxes across the fronts produced by the medium-scale temperature interleaving. The medium-scale fine structure heat fluxes are about 10% of the existing estimates of the mesoscale eddy heat fluxes and comparable to heat fluxes associated with the meridional flow of deep and bottom waters across the Antarctic Circumpolar Current. (Auth. mod.)

Hay, W.W., **Tectonics and climate,** *Geologische Rundschau,* Sep. 1996, 85(3), p.409-437, Refs. p.433-437.

Global tectonics and climate are both directly and indirectly related. The direct connection is between uplift, atmospheric circulation, and the hydrologic cycle. The indirect links are via subduction, volcanism, the introduction of gasses into the atmosphere, and through erosion and consumption of atmospheric gases by chemical weathering. An example of the tectonic influences on ocean circulation is given by reference to subantarctic Drake Passage. (Auth. mod.)

Fedulov, P.P., IAkovlev, V.N., **Anomalies of hydrometeorological conditions in the South Atlantic Ocean** [Anomalii gidrometeorologicheskikh usloviĭ v atlanticheskom sektore IUzhnogo okeana], *Rybnoe khoziaĭstvo,* Feb. 1986, No.2, p.19-21, In Russian.

DLC SH1.R8 1986

Investigations carried out during the summer of 1983-1984, confirmed that hydrometeorological anomalies influence seasonal processes of pelagic biocenoses. In contrast to excessively cold conditions prevailing during the previous 30 years, the occurrence of higher water temperatures was recorded around South Georgia and the South Sandwich Is. during the study period. Concurrently, an increase in the duration of phytoplankton autumn maximum development was observed.

Pallam Raju, D., Sridharan, R., Narayanan, R., Modi, N.K., Raghavarao, R., Subbaraya, B.H., **Ground-based optical observations of daytime auroral emissions from Antarctica,** *Journal of atmospheric and terrestrial physics,* Nov. 1995, 57(13), p.1591-1597, 14 refs.

First results obtained from ground-based observations on daytime auroral emission intensities from Maitri Station are presented and discussed. These results show striking increases in intensities in all the emissions (viz. low- and high-energy electron-induced and proton-induced emissions) during noon hours in a latitudinal region near the plasmapause and far from the conventional cusp zone. Wave-like disturbances are seen on moderately disturbed days in proton-induced emissions. Plausible causes for such enhancements and disturbances are discussed. (Auth.)

Jarvis, M.J., **First Dynasonde observations of F-region plasma flow at Halley, Antarctica,** *Journal of atmospheric and terrestrial physics,* Nov. 1995, 57(13), p.1611-1622, 28 refs.

Plasma flow vectors have been derived from data recorded by the Advanced Ionospheric Sounder (operating as a Dynasonde) at Halley Station. Single bulk flow vectors derived from the motion of echo reflection surfaces in the overhead F-region ionosphere are consistent both with plasma flow vectors poleward of Halley, observed simultaneously by the PACE HF radar and also for various levels of geomagnetic activity, with published mean plasma flow at the same invariant geomagnetic latitude. The results demonstrate application of the method and lend support to existing evidence that the velocity measured by this kind of technique, at least for moderate to active geomagnetic activity at high latitudes, represents ionospheric plasma flow. (Auth. mod.)

Burns, G.B., Hesse, M.H., Parcell, S.K., Malachowski, S., Cole, K.D., **Geoelectric field at Davis station, Antarctica,** *Journal of atmospheric and terrestrial physics,* Dec. 1995, 57(14), p.1783-1797, 6 refs.

An electric field mill is used to measure the vertical component of the geoelectric field at Davis Station. Local influences on the measurements are determined. Approximately a year of data is subjectively examined to determine periods when the fair-weather electric field is expected to be dominant. Using a cumulation of consecutive differences method, small intervals of data are combined to determine winter, spring and autumn diurnal fair-weather electric field curves. The seasonal-diurnal curves each show a peak between 19 UT and 22 UT that is similar in temporal location and relative magnitude to the global, fair-weather, seasonal diurnal curves. (Auth. mod.)

Nakagawa, M., et al, **Observation of cosmic rays and auroral X-rays in the Polar Patrol Balloon Experiment,** *Advances in space research,* May 1996, 17(9), COSPAR Panel on Technical Problems Related to Scientific Ballooning, Meeting, Hamburg, Germany, July, 1994. Proceedings, p.(9)111-(9)114, 5 refs.

The Polar Patrol Balloon, aimed at studying the elemental and isotopic composition of galactic cosmic rays, solar energetic particles, cosmic gamma ray bursts and auroral X-rays was launched from Showa Station by the 34th Japanese Antarctic Research Expedition on Jan. 5, 1993. The balloon moved westward by 1.5 circumpolar rounds over Antarctica covering 6-13 g/cm^2 atmospheric depth and 63°S-70°S geographic latitude. A total of 584 hours of observations was obtained. The balloon trajectory, the observing system and preliminary results of spectra and global distribution of cosmic radiation and auroral X-rays are described. (Auth. mod.)

The papers in this collection were presented at the Tenth National Congress of the Australian Institute of Physics held at Melbourne University, Victoria between Feb. 10 and 14, 1992. This anthology consists of papers the authors considered relevant to Australian antarctic research which were presented in sessions on Solar-Terrestrial and Space Physics. The majority of the papers are preliminary and are intended as an indication of some of the current directions of Australian upper atmospheric and space physics research in Antarctica. It is anticipated that final results will appear in appropriate journals.

DLC QC869.4.A6A95

The complete spectrum of ULF waves, from ion cyclotron waves (f=few Hz) down to hydromagnetic and other waves with periods of minutes, plays an important role in dissipating energy involved in the solar terrestrial interaction. These waves cause oscillations in the ionospheric current systems and ground-based magnetometers are sensitive to the magnetic field variations associated with these perturbations. The Space Plasma Waves Group at Newcastle University in conjunction with the Antarctic Division operates an antarctic network of induction magnetometers in order to study these processes. This review presents an overview of these activities. (Auth.)

Fraser, B.J., **U.S. National Science Foundation's Geospace Environmental Modelling (GEM) Program, 1990-1995,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.9-12, 7 refs.

DLC QC869.4.A6A95

The Geospace Environment Modelling Program (GEM) is an NSF initiative to produce a comprehensive model of the interactions of the solar wind with the earth's magnetosphere and ionosphere. The scientific goal of GEM is to understand the solar-terrestrial system well enough to be able to formulate a mathematical framework that can predict the deterministic properties of geospace ('weather in space') and the statistical characteristics of its stochastic properties ('climate in space'). The approach taken was to identify the problems requiring solution and place these in a framework that would be most likely to produce the global geospace circulation model. As a consequence the program consists of a series of overlapping and integrated efforts to address predetermined problems which are supported by a synchronized series of both theory and observational campaigns. Important input to the GEM program is provided by the Australian antarctic upper atmosphere research program. (Auth. mod.)

Morris, R.J., Cole, K.D., Troitskaia, V.A., Fraser, B.J., Hansen, H.J., Menk, F.W., **Multi-site high-latitude ULF magnetic pulsation studies,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.13-18, 15 refs.

DLC QC869.4.A6A95

A case study of Pc1-2 and Pc3 magnetic pulsation events, recorded on the Australian antarctic and subantarctic digital array of induction magnetometers, is presented. The database comprised three fortnightly digital campaigns conducted during the 1990 austral winter and the 1991 austral summer, respectively. The summer campaign was augmented by a traverse which supported the operation of a field induction magnetometer at Law Dome, some 130 km inland from Casey. The ULF waves presented appear to maximize in occurrence frequency and amplitude under the projection of the dayside polar cusp and polar cleft. The propagation characteristics of these emissions over the widely spaced array (Inv. 64-80.6°S) are reported. The study focuses on whether aspects of the reported high-latitude magnetic pulsation events and their reported propagation characteristics provide a ground diagnostic for estimating the location of the projection of the polar cusp and adjacent magnetospheric regions. (Auth.)

Dunlop, I.S., Menk, F.W., Hansen, H.J., Fraser, B.J., Morris, R.J., **Multistation study of long period geomagnetic pulsations in the polar cleft and cusp,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.29-41, 19 refs.

DLC QC869.4.A6A95

Long period ($1<f<15$ mHz) geomagnetic pulsations recorded at 4 Australian antarctic stations and the New Zealand station Scott Base have been examined in order to identify wave characteristics associated with different generation mechanisms and magnetospheric source regions. Three distinct wave types were found. First, sustained quasi-sinusoidal oscillations recorded for several hours around local noon at boundary layer latitudes are most likely explained by the excitation of field line resonances by the Kelvin-Helmholtz instability. Second, irregular pulsations (IPCL) are found near local noon at cusp latitudes, but are not necessarily a cusp indicator. Finally, short bursts from one to a few cycles duration are observed both poleward and equatorward of the cusp during local daytime. Where these emissions are observed at only one station they may be signatures of magnetospheric flux transfer events (FTE). Their occasional observation simultaneously at several stations is suggestive of global impulsive compressions of the geomagnetic cavity. (Auth.)

Hansen, H.J., Fraser, B.J., Menk, F.W., Newell, P.T., Meng, C.I., Morris, R.J., **Sources of solar wind associated Pc3-5 magnetic pulsations in the magnetosphere,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.42-48, 8 refs.

DLC QC869.4.A6A95

Dayside Pc3-5 (30-70 mHz) magnetic pulsations were recorded during a 14-day campaign in Apr. 1990 with a three station array of induction magnetometers in Antarctica spanning 70-80°S MLAT and almost five hours in local time. During two intervals when it was possible to associate these pulsation signals with the solar wind upstream of the bow shock, interstation cross-spectral and polarization analysis shows the waves enter via two regions simultaneously. One is situated in the pre-noon local time sector in the sun-earth reference frame where bow shock turbulence peaks near the nose of the magnetosphere. The other is most likely along the magnetospheric boundary plasmasheet region which maps down to the dayside auroral region. (Auth.)

Hansen, H.J., Fraser, B.J., Menk, F.W., Erlandson, R.E., **Ground-satellite observations of high latitude Pc1-2 pulsations,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.74-81, 18 refs.

DLC QC869.4.A6A95

During 1986 the Viking polar orbiting satellite identified 21 intervals of high latitude Pc1 (0.2-5 Hz) activity from 59-77° MLAT above the Northern Hemisphere. This paper presents an analysis of concurrent Pc1 activity recorded at Mawson Station where similar activity was found on 7 occasions when Viking was located essentially conjugate. As ion cyclotron waves are considered to be responsible for the Viking observations, the analysis of this associated Mawson activity contributes towards understanding how ion cyclotron wave energy is transmitted from the high latitude equatorial magnetosphere to the ground. Consequently, this study elucidates the relationship between the frequency changes of Pc1 waves observed at Mawson and the morphology and dynamics of magnetospheric ion cyclotron wave generation regions responsible for this activity. (Auth.)

Francke, M.H., Hansen, H.J., Menk, F.W., Fraser, B.J., Morris, R.J., **Propagation of Pc1 magnetic bursts across the polar cap region,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.82-88, 13 refs.

DLC QC869.4.A6A95

Pc1 (0.2-5 Hz) magnetic pulsations were recorded during a 14-day campaign in July 1990 using a ground array of induction magnetometers in the Australian Antarctic Territory. This paper is concerned with the analysis of the spatial characteristics of discrete Pc1 bursts or packets, often recorded in association with solitary magnetic impulses (period=1 to 10 min). Interstation cross-spectral analysis of these Pc1 events allows their phase velocities to be determined and their ionospheric attenuation to be studied. The ionospheric source of high latitude Pc1 signals has previously been interpreted in terms of the arrival at the ionosphere of magnetospheric ion cyclotron waves. These results thus relate to the dissipation and propagation of magnetospheric ion cyclotron wave energy in the ionosphere. (Auth.)

Li, Y., Webster, D.J., Menk, F.W., Fraser, B.J., **Generation and propagation mechanisms of Pi2 geomagnetic pulsations,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.89-98, 11 refs.

DLC QC869.4.A6A95

Impulsive transient geomagnetic pulsations in the 5-25 mHz range (Pi2) at auroral latitudes accompany the onset of geomagnetic substorms. They can also be recorded at low latitudes, although how the signals propagate to these regions is unknown. In this study Pi2 events recorded across an induction and fluxgate magnetometer array from L=5.3 (Macquarie I.) to L=1.44 (Gladstone, Qld), and Auckland, New Zealand, are examined. Wave spectra, latitudinal amplitude distribution, phase and polarization characteristics are obtained using pure state analysis techniques. These results imply that low-latitude Pi2 are associated with distinctly different generation and propagation mechanisms than those at high latitudes. (Auth.)

Greet, P.A., Jacka, F., **Analysis of high-resolution mesospheric sodium twilight spectral emission profiles,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.112-116, 2 refs.

DLC QC869.4.A6A95

High-resolution Fabry-Perot spectrometers have been used for observations of mesospheric sodium spectral emissions excited by resonant scattering of sunlight. These observations are used to estimate winds and temperatures in the emission region. To extract wind estimates from the Doppler shift of sky emissions, hollow-cathode tubes have been used to define the rest wavelength of the emission. Careful analysis of both tube and sky spectra show the presence of self-absorption. The nature of the absorption is different for tube and sky profiles; in the former case absorption occurs after emission, and in the latter absorption occurs in the incident radiation prior to emission. There is a further complication in the latter case, viz. the Doppler shift of the absorption is determined by the wind component in the direction of the sun while the Doppler shift of the emission is determined by the wind component in the direction of viewing. The effects of these absorption processes on wind and temperature estimates are discussed. (Auth.)

Klekociuk, A.R., Burns, G.B., **O(^{1}S) excitation and effective lifetimes,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.117-129, 13 refs.

DLC QC869.4.A6A95

Intensity time-series with a 0.05 s time resolution were obtained for the 428 nm N_2^+ (1NG) band and 558 nm O(^{1}S) line emissions during intervals of rapidly fluctuating auroral intensities at Macquarie I. during 1988. Similar measurements have been used by previous workers to infer the effective lifetimes of the O(^{1}S) state and the existence of, and percentage contribution from, an indirect excitation process. The method the authors introduce allows determination of an upper limit for the mis-interpretation as an indirect process of nonlinearities known to exist between the 428 nm N_2^+ (1NG) band and 558 nm O(^{1}S) line emissions. These nonlinearities have been ignored in previous investigations of O(^{1}S) excitation processes. (Auth. mod.)

Craven, M., Burns, G.B., Klekociuk, A.R., McEwen, D.J., **Inferring auroral energies,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.130-142, 14 refs.

DLC QC869.4.A6A95

A program was undertaken at Mawson Station during the 1991 austral winter to infer auroral electron energies from ground-based optical and cosmic noise absorption measurements. Energies inferred from these measurements will be compared with those recorded *in situ* by DMSP satellites crossing the observed region of interest. By comparing absorption levels with optical intensities it is hoped to extend to high energies the range for which this ground-based method can be used. By using the satellite particle data it is intended to establish some limits on the variability inherent in using instruments with wide fields-of-view for inferring auroral energies. (Auth. mod.)

Beggs, H.M., Essex, E.A., Rasch, D.J., **Antarctic polar cap total electron content observations using a differential phase technique at Casey Station,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.143-154, 16 refs.

DLC QC869.4.A6A95

In early 1990 a modified JMR-1 satellite receiver system was installed at Casey Station in order to monitor the differential phase between the 150 MHz and 400 MHz signals from polar orbiting NNSS satellites. Total electron content (TEC) was calculated using the differential phase and Casey ionosonde foF2 data, and is presented here for near sunspot maximum in Aug. 1990 and exactly one year later. The data are used to investigate long-lived ionization enhancements at invariant latitudes polewards of -80°Λ, and the 'polar hole', a region from -70° to -80°Λ on the nightside of the polar cap where reduced electron density exists because of the long transport time of plasma from the dayside across the polar cap. A comparison is made between the Casey TEC data and the Utah State University Time Dependent Ionospheric Model (TDIM) which uses as variables the solar index (F10.7), season (summer, winter or equinox), global magnetic index (Kp), IMF B_y direction, and universal time (UT). (Auth.)

Rasch, D.J., Essex, E.A., **Quasi periodic scintillation events at southern auroral latitudes,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.155-164, 27 refs.

DLC QC869.4.A6A95

Quasi-periodic (QP) radio scintillations were observed during 1987 in the southern auroral zone, on 244 MHz and 1.5 GHz geostationary satellite transmissions, from Davis Station. The substantial loss of signal associated with these events may be an important factor in determining the reliability of satellite links in auroral regions. Three distinct types of QP events were identified, two of which could be adequately described by existing models involving the passage across the raypath of a narrow, highly ionized or highly depleted column irregularity. A third type of event observed on 244 MHz could be modelled by the passage of an opaque column irregularity which also supported a reflected ray at grazing incidence. The dominant occurrence time for QP events on both frequencies was 18-00 hours MLT. At these times, the raypath may intersect the poleward edge of the trough where sporadic-E or low F-region tilted structures may be produced by the passage of medium-scale acoustic gravity waves. Hesse, M.H., Burns, G.B., Malachowski, S., **Ground based electric field measurements at Davis Station, Antarctica,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.165-179, 2 refs.

DLC QC869.4.A6A95

An electric field mill has been used to measure the vertical component of the earth's electric field at Davis Station since Mar. 1988. Comparisons of electric field values with a range of simultaneously recorded meteorological data are used to determine the magnitude and variability of local influences at the Davis site. Dependences on wind speed, wind direction and airborne snow are demonstrated. The relationship between the electric field values and the wind speed is shown to be loosely dependent on the level of the relative humidity. Approximately one year's data (July 8, 1989 to July 10, 1990) is subjectively examined to determine periods when the 'fair weather' electric field is expected to be dominant. From this 'fair weather' data set, diurnal electric field curves are obtained for the four seasons. The data set is also examined for evidence of further contamination from local sources. Von Biel, H.A., **Ionisation below 55 km in the antarctic mesosphere,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.180-190, 12 refs.

DLC QC869.4.A6A95

The characteristics of a thin layer of ionization, occasionally observable during the antarctic summer months at heights between 40 km and 55 km, are described. The results presented pertain to data collected over five consecutive years since 1987 from a 2.9 MHz partial reflection program operated at Scott Base. The maximum density of the layer is most frequently found to be in the vicinity of 600/cm^3, which is sufficiently low to rule out ionization by energetic protons, while photo-ionization would produce a layer of nearly twice the observed thickness of about 12 km. It is shown that ionization by relativistic electrons might well account for the production of this ionization. (Auth.)

DLC QC869.4.A6A95

A fast response riometer with a 5 MHz bandwidth and a resolution of 0.02 dB was used to measure cosmic noise absorption (CNA) pulsations during a pulsating aurora event at Macquarie I. Comparisons of the CNA pulsations with optical intensities of the N_2^+ 1NG (0, 1) band were used to infer 'ionospheric time constants' in the range 2-10 s. Using reasonable approximations to the altitude and width of the absorption layer, and some recently published measurements of the effective recombination rate and specific absorption (dB/km per electron density), an attempt was made to balance the measurements of total absorption and the inferred time constants. The varying results obtained are most likely related to variations in the average energy of the precipitating auroral electrons (and thus variations in the altitude of the absorption layer) during the event. By incorporating a means of estimating the average and total energy of the incident auroral particles, the method of analysis used here may provide a means to measure the height profile and seasonal variation of the D-region effective recombination coefficient. Baker, C.P., Humble, J.E., Duldig, M.L., **Heliospheric modulation models of high-energy cosmic rays: theory vs observation at 1 AU,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.244-263, Refs. p.260-262.

DLC QC869.4.A6A95

The intensity of galactic cosmic rays in the solar system can be determined theoretically by solving the standard cosmic ray transport equation. Numerical solutions are presented for cosmic rays in the energy range 10^9 to 10^{10} eV. Comparisons are made between the calculated radial gradient of cosmic rays at earth and that inferred by terrestrial based neutron monitors. This comparison shows a discrepancy between theory and observation by up to a factor of 5. The radial gradient is inferred from observations of the 'north/south anisotropy'. A method of observing this anisotropy at these and slightly higher energies, and inferring the radial gradient using the cosmic ray detectors at Mawson Station, is given. Possible inadequacies of the model are also discussed. (Auth.)

Gillingham, P.R., **Antarctic astronomy—introduction and summary of international developments affecting Australia,** *Australian National Antarctic Research Expeditions. ANARE* *research notes,* Nov. 1992, No.88, p.285-289, 5 refs.

DLC QC869.4.A6A95

The extremely dry and cold atmosphere above the highest part of the antarctic plateau presents opportunities for astronomical observations at infrared (IR) and mm wavelengths substantially better than from anywhere else on earth. Contrary to the popular concept of Antarctica, the climate high on the plateau features low wind speeds, mostly clear skies and relatively little snowfall. Many nations have already done astronomical work in Antarctica, some producing very good science, and in the last few years there has been a substantial quickening of interest. Several US institutions have collaborated to set up a Center for Astrophysical Research in Antarctica and this group has plans for greatly increasing the power of IR and mm instruments at South Pole. A new international observatory sited for optimum astronomical performance has also been proposed. Australian and French astronomers, meeting in 1991 to discuss future collaboration, placed developments in Antarctica as their highest priority and a follow-up meeting on this topic will be held in 1992. At its triennial General Assembly in 1991, the International Astronomical Union adopted a resolution urging the establishment of an international high altitude observatory in Antarctica and set up a Working Group to encourage this. Gillingham, P.R., **Super seeing from the Australian Antarctic Territory?,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.290-292, 4 refs.

DLC QC869.4.A6A95

In seeing, the degradation of resolution due to the earth's atmosphere is a crucial factor in determining the performance of ground-based telescopes. This degradation is predominantly the result of thermal inhomogeneity of the air, to which a substantial contribution arises from the diurnal cycle of solar heating. In most of Antarctica the diurnal variation in temperature is negligible throughout winter, so good seeing can be expected on this account. Above the highest point of the antarctic plateau the predominant air flow is a slow settling from the stratosphere which should promote extraordinarily uniform optical quality. Unfortunately, the lower boundary layer in which a strong inverse temperature gradient develops, especially in winter, is often likely to degrade what might otherwise be unprecedented seeing. Critical tests are needed to measure this degradation and determine whether it can be circumvented by mounting a telescope on a higher pier than usual. (Auth.)

Burton, M.G., Allen, D.A., McGregor, P.J., **Potential of near-infrared astronomy in Antarctica,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.293-300, 4 refs.

DLC QC869.4.A6A95

The highest part of the antarctic plateau (Dome A) holds the promise of providing a superlative site for near-infrared (IR) astronomy, and in particular for observations in the 2.27-2.45 micron waveband. This is a result of the intense cold, which reduces the thermal background by 6 magnitudes compared to a mid-latitude site; the absence of OH airglow emission between these wavelengths, and the minimum in the zodiacal emission which occurs in the near-IR. The prospects exist for the darkest site for astronomy at any wavelength, anywhere in the inner solar system. Some possible scientific projects to exploit this potential, particularly deep cosmological surveys, are outlined. (Auth.)

K-54228

Smith, C.H., **Potential for mid-infrared astronomy from Antarctica,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.301-308.

DLC QC869.4.A6A95

The antarctic plateau, with its very dry and cold atmosphere, presents a number of advantages for astronomy in the thermal infrared region. With atmospheric temperatures 60-80° below zero, the thermal background drops by a factor of 5, compared with the best currently available observatory sites (e.g. Mauna Kea). More importantly, however, the extremely low precipitable water vapor content in the antarctic atmosphere (200-600 microns) means that the accessible region of the spectrum extends virtually all the way to 60 microns, compared with the almost complete cutoff at 22 microns for currently available observing sites. While the potential gains are significant, there are also some potential drawbacks, such as ice 'haze'. It is essential that site testing begin as soon as possible to determine the reality of the benefits from siting a telescope in Antarctica. (Auth.)

Storey, J.W.V., Hyland, A.R., **Far-infrared and sub-millimeter astronomy in Antarctica,** *Australian National Antarctic Research Expeditions. ANARE research notes,* Nov. 1992, No.88, p.309-313, 4 refs.

DLC QC869.4.A6A95

The wavelength range from 5 to 500 microns is one of the most technologically difficult for astronomers. For this reason, and also because of poor atmospheric transmission, the region has until recently been underexploited relative to, say, the radio and optical regions. To avoid the poor transmission and high emissivity of the atmosphere, astronomers have frequently resorted to balloons, stratospheric aircraft or even satellites to carry out the observations. The high altitude, extremely low temperatures and low humidity of the antarctic plateau combine to make it potentially the best site on earth for far-infrared and sub-mm astronomy. Indeed, at some wavelengths, it is the only place on earth from which ground-based astronomy is possible. This research note reviews the current status of antarctic astronomy in the far-infrared and sub-mm, and suggests potential areas for Australian involvement. (Auth.)

Alford, J., Engebretson, M., Arnoldy, R., Inan, U., **Frequency variations of quasi-periodic ELF-VLF emissions: a possible new ground-based diagnostic of the outer high-latitude magnetosphere,** *Journal of geophysical research,* Jan. 1, 1996, 101(A1), p.83-97, 32 refs.

This paper examines data from South Pole Station (L ≈ 14) to determine the occurrence and characteristics of quasi-periodic (QP) emissions. On the basis of 14 months of data during 1987 and 1988 QP emissions typically appeared in both the 0.5-1 kHz and 1-2 kHz receiver channels at South Pole and occasionally in the 2-4 kHz channel. The QP emission frequency appeared to depend on solar wind parameters and interplanetay magnetic field (IMF) direction, and the months near fall equinox in both 1987 and 1988 showed a significant increase in the percentage of QP emissions only in the lowest-frequency channel. A model consistent with these variations in which high-latitude (nonequatorial) magnetic field minima near the magnetopause play a major role is presented. Because the field in these regions will be strongly influenced by solar wind and IMF parameters, variations in the frequency of such emissions may be useful in providing ground-based diagnostics of the outer high-latitude magnetosphere. (Auth. mod.)

Morrison, K., et al, **ULF modulation of ELF-VLF emissions close to the magnetospheric boundary,** Physical signatures of magnetospheric boundary layer processes, edited by J.A. Holtet and A. Egeland, Dordrecht, Kluwer Academic Publishers, 1994, p.375-381, Refs. p.380-381.

The spatial extent and temporal behavior of quasi-periodic (QP) intensity modulations of 0.5-2 kHz ELF-VLF emissions were investigated in a comparative study of data collected at three antarctic stations. Frequently, the waveforms of the ELF-VLF signals received at each site were identical. The emissions are identified with the periodic modulation of the electron pitch-angle distribution by the propagation of ULF compressional fast-mode waves through a region. In addition to generation close to the equatorial plane, the authors propose an additional high-latitude source of QP emissions. These emissions are associated with regions of minimum-*B* produced by the dayside compression of the magnetosphere close to the magnetopause. (Auth.)

Engebretson, M.J., et al, **Optical evidence that modulated electron precipitation near the magnetosphere boundary drives high latitude Pc3-4 magnetic pulsations,** Physical signatures of magnetospheric boundary layer processes, edited by J.A. Holtet and A. Egeland. NATO ASI Series, C: Mathematical and Physical Sciences, Vol.425, Dordrecht, The Netherlands, Kluwer Academic Publishers, 1994, p.361-373, 22 refs.

DLC QC809.M35P48 1994

South Pole Station is uniquely situated for studies of the high latitude winter ionosphere both because of the extended darkness its geographical location provides and because it is located near the nominal latitude of the foot of the dayside cusp/cleft region during periods of moderate geomagnetic activity. Simultaneous magnetic and optical signatures of Pc3-4 pulsations for 94 days during the 1990 austral winter were examined. The pulsation occurrences in both magnetic field and auroral light were closely linked, with narrowband optical pulsations occurring only when similarly narrowband Pc3-4 magnetic pulsations were also present. In addition, optical pulsations occurred only when the station was under the boundary layer or the outer magnetosphere. The data indicate that nearly all of the observed magnetic pulsations may be accompanied by modulated electron precipitation. The modulated electron flux inferred from the optical measurements was sufficient to produce the observed magnetic pulsations. (Auth.)

Nakajima, T., Kamiyama, T., Fujii, Y., Motoyama, H., Esumi, S., **Ice-based altitude distribution of natural radiation annual exposure rate in the Antarctica zone over the latitude range 69S-77S using a pair-filter thermoluminescence method,** *Applied radiation and isotopes,* Dec. 1995, 46(12), p.1363-1368, 9 refs.

Both ice-based altitude distributions of natural ionizing radiation exposure and the quasi-effective energy of natural radiation over Antarctica over the latitude range 69-77°S during approx. 500 days were measured using thermoluminescence dosimeters. The results show that dependence on altitude above sea level of the exposure rate increases by almost three-fold with each 2000 m increase in altitude, thus deviating from the general rule stating that the exposure rate should double with each 2000 m. Although the exposure rate shows a dependence on altitude, altitude dependence of the quasi-effective energy of natural radiation over Antarctica was not observed. It was observed that natural radiation occurring over the ice base of Antarctica consists mainly of cosmic rays. (Auth.)

Nunn, D., Smith, A.J., **Numerical simulation of whistler-triggered VLF emissions observed in Antarctica,** *Journal of geophysical research,* Mar. 1, 1996, 101(A3), p.5261-5277, 24 refs.

The British Antarctic Survey VLF database from Halley and Faraday stations has been searched for clear examples of whistler-triggered emissions (WTEs). Dominant events were the triggering of risers or quasi-constant frequency emissions from the upper arm of a whistler. A fairly frequent occurrence was the triggering of steep fallers from the whistler upper arm. At Faraday most WTE events were the triggering of long steep risers from the lower whistler arm. A VHS/VLF Vlasov hybrid simulation code was run and successfully simulated the main categories of WTE: risers and fallers off the upper arm and risers from the lower arm. Agreement with observations was generally good. The Vlasov code is highly efficient and well suited to this problem. (Auth. mod.)

Steig, E.J., Polissar, P.J., Stuiver, M., Grootes, P.M., Finkel, R.C., **Large amplitude solar modulation cycles of ^{10}Be in Antarctica: implications for atmospheric mixing processes and interpretation of the ice core record,** *Geophysical research letters,* Mar. 1, 1996, 23(5), p.523-526, 40 refs.

Beryllium isotope (^{10}Be) concentrations in an ice core at Taylor Dome show greater variation over the last 75 years than similar ^{10}Be time-series from Greenland. Like the Greenland records, the new antarctic data exhibit a strong periodicity which follows expected changes in the production rate of ^{10}Be over the 11-year solar cycle. Noting that the amplitude of production-rate variation is both latitude and altitude dependent, the authors estimate the relative contribution of ^{10}Be from different atmospheric reservoirs. The calculations yield a relatively small (<35%) contribution from the low-to-midlatitude stratosphere, suggesting a weak coupling between antarctic ^{10}Be and geomagnetic field intensity. (Auth. mod.)

Liu, C.F., Liu, C.J., Jiao, C.M., Wang, Y., **Quiet daily variations S_q of geomagnetic field at Zhongshan Station, Antarctica in 1991,** *Antarctic research (Chinese edition),* 1995, 7(3), p.81-88, In Chinese with English summary. 14 refs.

The geomagnetically quiet daily variations (S_q-field) are analyzed at Zhongshan Station during the period of maximum solar activity in 1991. The S_q-field consists of both the S_q^0-field and S_q^p-field. Amplitudes of variation are larger in summer than in winter. The S_q^0(H) variation appears in a twin-peak pattern in summer. S_q^0-field is mainly controlled by the higher latitudinal ionospheric S_q current system in the polar region. The morphology of S_q^p-field variability shows no difference between daytime and nighttime. The intensity of S_q^p-field variability is less in the winter than in the summer. The S_q^0(Z) variation is larger than the S_q^0(H) variation. In particular, the amplitude of S_q^0(Z) is twice as large as S_q^0(H) in winter. (Auth. mod.)

Frichter, G.M., Ralston, J.P., McKay, D.W., **On radio detection of ultrahigh energy neutrinos in antarctic ice,** *Physical review D,* Feb. 1, 1996, 53(3), p.1684-1698, 35 refs.

Antarctic ice meets the requirements for an efficient detection medium for a radio frequency neutrino telescope. This paper estimates the sensitivity of realistic antennas embedded deep in the ice to 100 MHz-1 GHz signals generated by predicted neutrino fluxes from active galactic nuclei. The conclusion is that a single radio receiver can probe an ≈ 1 km^3 volume for events with primary energy near 2 PeV and that the total number of events registered would be roughly 200 to 400/yr in the most conservative estimate. An array of such receivers would increase sensitivity dramatically. A radio neutrino telescope could directly observe and test our understanding of the most powerful particle accelerators in the universe, simultaneously testing the standard theory of particle physics at unprecedented energies. Viotti, R., **Antarctica as a center for astronomical observations** [L'Antartide come sede per osservazioni astronomiche], *Ambiente Antartide,* Dec. 1995, No.6, p.28-29, In Italian with English summary.

The point is made that sites such as Dome Charlie (3280 m), where environment conditions of extreme dryness, very low ambient temperatures, faint and laminar winds, low sky brightness, etc., are quite favorable for astronomic observations, key studies can be carried out which cannot be made elsewhere at ground level. Astronomy from the Antarctic Plateau might open new windows on the Universe in the mid- and far-infrared range which can now be observed only from high altitude air flights or satellites; it can carry out high quality observations at any wavelength range to highlight microphotometric phenomena related to stellar evolution, and it can allow systematic search of unpredictable phenomena in special fields, such as the rate of nova and supernova explosions in distant galaxies. (Auth. mod.)

Hereld, M., **SPIREX - Near infrared astronomy from the South Pole,** Infrared astronomy with arrays: the next generation, edited by I.S. McLean, Dordrecht, Kluwer Academic Publishers, 1994, p.248-252.

DLC QB470.A1I535

Over the next several years, a series of spectrometers, imagers, and telescopes will be deployed at the South Pole as part of a project named SPIREX (South Pole Infrared Explorer). The goal is to survey a substantial area of the sky to study the origins of galaxies and stars. From space, the zodiacal light is the limiting source of noise over a wide range of wavelengths. It has a minimum in the NIR: the reflected sunlight is diminishing with wavelength and reradiated thermal emission from the warm dust is on the rise. For this and other reasons, the NIR is potentially the best window in which to carry out deep surveys of galaxies. On the ground, the sensitivity of observations in the NIR is limited by the Poisson noise of the large background flux from the atmosphere and telescope. Within a restricted wavelength range, this background depends only on two parameters: their temperature and emissivity. By building very low emissivity telescopes and operating them in the bitter cold of the antarctic winter, it will be possible to make observations that will rival in sensitivity those attainable from cooled space-based telescopes. (Auth.)

Ikeda, M., Nagano, I., Shimbo, T., Carpenter, D.L., **Intensities and polarization rates of whistler mode VLF signals observed from a ground network near *L*=4,** *Journal of geophysical research,* Apr. 1, 1995, 100(A4), p.5691-5703, Refs. p.5702-5703.

VLF signals transmitted from Siple Station that propagated through the ionosphere and magnetosphere to the Northern Hemisphere and triggered emissions generated by the Siple signals in the magnetosphere are radiated from wave exit areas on the ionospheric lower boundary. The locations and extent of the wave exit areas are deduced from the wave intensity distributions measured on the ground. In this method the authors use measurements of wave magnetic intensity made simultaneously at six stations. As a result of analyzing a triggered emission in detail, the extent of the wave exit area of the downgoing triggered emission is estimated to be 25-50 km or so at an altitude of 80 km. It is believed that this value relates to the horizontal extent of the duct through which the triggered emission propagates in the magnetosphere and ionosphere and that essentially only direct waves transmitted from the wave source arrive within a range of 200 km from the wave intensity peak on the ground. Miller, T., AMANDA Collaboration, **Initial analysis of coincident events between the SPASE and AMANDA detectors,** *Nuclear physics B. Proceedings supplements,* June 1995, Vol.43, Trends in atmospheric physics. Proceedings of the workshop, p.245-248, 7 refs.

DLC QC770.N772

The present South Pole Air Shower Experiment (SPASE-1) and Antarctic Muon and Neutrino Detector Array (AMANDA) have been running in coincidence at the Amundsen-Scott Base since Feb., 1994. With both detectors runninng together, air shower size and direction can be measured by SPASE-1 and muon content measured by AMANDA. By studying events that trigger both detectors one can gain information about the primary cosmic ray composition in the region around the knee. The ability to find and analyze the coincident events has been demonstrated and the results as of Sep., 1994 are described. In addition, coincident operation of SPASE-1 and AMANDA is proving to be an extremely valuable diagnostic tool for AMANDA in studies of the ice clarity and performance of the array.

Klaĭn, B.I., Kurazhkovskaia, N.A., Dovbnia, B.V., **Relationship between the θ-aurora and ULF emissions at high latitudes** [Sviaz' θ-siianiĭ s nizkochastotnymi izlucheniiami v vysokikh shirotakh], *Antarktika,* 1993, No.32, p.5-10, In Russian with English summary. 12 refs.

Variations in the electromagnetic emission accompanying the appearance of θ-aurora in the magnetosphere over polar regions have been studied. The study is based on the data obtained by antarctic and arctic observatories. It has been shown that modulated LF emissions appear within the range of 1.01-1.5 Hz where the characteristic modulation period is equal to ~30 min. during the θ-aurora on the latitude of the dayside cusp. These emissions precede the development of the transpolar arc in the night area of the polar cap by 15-30 min. The revealed effect may be explained by the development of a reconnection process in the cusp region, when B_z>0, and the following reconfiguration of the magnetospheric tail. (Auth.)

Neudegg, D.A., et al, **Sources and velocities of Pcl-2 ULF waves at high latitudes,** *Geophysical research letters,* Nov. 1, 1995, 22(21), p.2965-2968, 16 refs.

The polar cusp and boundary layer are important in eoupling magnetospheric energy sources to the high latitude ionosphere. Ultra high frequency (ULF) waves are one of the processes by which this coupling is realized. To study the source regions and propagation characteristics of discrete Pc1-2 (0.1-2 Hz) ULF wave packets, particularly of unstructured emissions and Pc1 bursts at high latitudes, a triangular array of closely spaced induction magnetometers (ca 150 km) was deployed beneath the average cusp projection during the 1992 antarctic winter. Wave sources were poleward of the array at low geomagnetic activity and equatorward at high activity. These results are interpreted as indicative of the ionospheric signature of sources localized in the cusp, the low latitude boundary layer or the outer magnetosphere. Intercalibration of the results for typical events with extrapolations of radar observations and satellite particle signatures support sources within these regions. The results suggest a technique for monitoring the high latitude boundary regions and outer magnetosphere using local ULF wave measurements. (Auth. mod.)

Arriagada M., M.A., Foppiano B., A.J., **Maximum ionospheric electronic concentrations over King George I. and Concepción, Chile** [Altura del máximo de concentración electrónica en la ionosfera sobre isla Rey Jorge, Antártica, y Concepción, Chile continental], *Santiago de Chile. Instituto Antártico Chileno. Serie científica,* 1995, No.45, p.49-56, In Spanish with English summary. 10 refs.

Maximum ionospheric electronic concentration heights over Concepción, Chile and King George I. were determined for each hour of June, Sep. and Dec. of 1986 and 1989, years which could be considered representative of low and high solar activity level conditions. The determinations were made using a well-known empirical formula with hourly values of ionospheric characteristics foF2, M(3000) F2 and foE derived from corresponding ionograms for the indicated periods. Heights are found to increase from winter to summer during most hours, for both locations and at low and high solar activity levels. Heights increase when the solar activity level is higher. Time-of-day variations can be adequately modeled for most cases using only diurnal, semidiurnal and terdiurnal harmonic components. (Auth.)

Cordaro, E.G., Storini, M., **LARC/6-NM-64: atmospheric pressure effects,** *Santiago de Chile. Instituto Antártico Chileno. Serie científica,* 1995, No.45, p.57-66, With Spanish summary. Refs. p.64-66.

An antarctic laboratory for cosmic rays (LARC) has been operating on King George I. since Jan. 19, 1991. The cosmic ray detector is a standard 6-NM-64. Results based on the 1991-93 dataset are reported to facilitate the elimination of pressure-induced effects on the recorded cosmic-ray intensities. The authors found a barometric coefficient of about 0.74%/mb as the most appropriate value to be used. (Auth.)

Shea, M.A., Smart, D.F., Dreschhoff, G.A.M., Zeller, E.J., **Flux and fluence of major solar proton events and their record in antarctic snow,** *Phillips Lab/GPSG. Technical report,* Mar. 1994, PL-TR-94-2061, 5p., ADA-277 485, Reprint from 23rd International Cosmic Ray Conference, Conference Papers, 3, 846-849, 1993.

A study of the major solar proton events since 1955 has shown that the large fluence events are likely to be associated with a solar flare source near the central meridian of the sun, while events with large peak proton-flux are likely to be associated with solar flares near the west limb of the sun. The authors compare the solar proton events to the measurements of nitrate concentrations in the antarctic ice and find that the largest concentrations are associated with the major fluence events. From these results, they are able to assign a probable solar proton event source to three of the major peaks in the nitrate record prior to 1955. (Auth.)

DLC QB470.A1A37

The Antarctic Plateau provides the pre-eminent sites on the surface of the Earth for many types of astronomical observation. Australia has embarked on a site testing program to quantify the ultimate sensitivity levels achievable. The program is now in operation at the South Pole, where an infrared sky brightness monitor and micro-thermal temperature sensors have been deployed. The plan is to extend these measurements, first at the Pole, and then to the highest parts of the Plateau, Domes Argus and Circe. The latter will involve adapting an Automated Geophysical Observatory, a mobile laboratory designed for autonomous operation on the Plateau, for astrophysical purposes. (Auth.)

DLC QB470.A1A37

The National Science Foundation Center for Astrophysical Research in Antarctica (CARA) is described. At its inception, the Center organized its research into four projects. Three—AST/RO, COBRA, and SPIREX—address key problems in star formation, evolution of galaxies, and the distribution of matter in the early universe. They feature surveys which can be conducted effectively with moderate-size telescopes operated in a highly automated mode. They also explore the potential of the Antarctic Plateau for a broad range of astrophysical research over a spectral range extending from the near-infrared to millimeter wavelengths. A fourth ATP was created to obtain quantitative data on the qualities of the South Pole site and to plan for future scientific projects. During the next five years, AST/RO, COBRA, and SPIREX will become operational, and the Center will begin to build a second generation of telescopes which can address a broader range of problems and accommodate a larger community of users.

Barwick, S.W., et al, **AMANDA: Antarctic Muon And Neutrino Detector Array,** Trends in astroparticle-physics, edited by P.C. Bosetti. Proceedings of the 2nd International Conference on Trends in Astroparticle-Physics, Aachen, Germany, Oct. 10-12, 1991, Stuttgart, B.G. Teubner Verlagsgesellschaft, 1994, p.211-216, 7 refs.

DLC QB463.T75 1994

Enormous detectors with unprecedented sensitivity will be required to search for astrophysical sources of neutrinos. If the transparency of deep polar ice is similar to that measured in the laboratory, then AMANDA (Antarctic Muon and Neutrino Detector Array) may be the most cost-effective way to reach the detector volumes required to search for astrophysical sources of high energy neutrinos or WIMP annihilation within the sun. The authors describe a series of tests to be conducted near Amundsen-Scott Station during the '91-'92 antarctic campaign. The primary goal of these tests is to extend the optical transparency measurements of polar ice to a depth of one km by measuring the rate of downward-moving muons with a prototype string of 4 optical modules. Additional objectives include the measurement of up/down discrimination, background light levels, and timing resolution. The design of the prototype string and its expected performance based on laboratory calibrations are discussed. (Auth.)

Stoker, P.H., **Riometer absorption events at SANAE, L=4.0,** *Astrophysics and space science,* Aug. 1995, 230(1-2), p.405-413, 17 refs.

The absorption of cosmic radio noise passing through the ionosphere may be described as a function of radio wave frequency $A(f_e) \alpha f_e^{-n}$, with $n \approx 2.0$ for spatially uniform precipitation of electrons and $n<2.0$ for spatially nonuniform precipitation. Using multifrequency riometer recordings at SANAE, the following observations are reviewed: the frequency distribution of the power index, n, obtained from 4 min averaged absorptions during 1983, shows a most probable value around $n \approx 1.5$, indicating that mostly energetic electrons are precipitated spatially structured onto the upper atmosphere, as in an optical aurora. Multifrequency riometer recordings suggest that field-aligned ionospheric irregularities have scattered additional cosmic radio waves from the central region of the Galaxy into the fields of view of the riometer antennae during an auroral absorption event in the early morning hours of July 27, 1982. Gradual increases in absorptions observed at all three riometer frequencies from onset at 11:50 UT of the largest solar proton ground level enhancement on Sep. 29, 1989, until 18:00 UT, suggest diffusion of the much more intense low energy protons from the polar cap to the L=4.0 geomagnetic field shell and subsequent precipitation at SANAE due to the South Atlantic Geomagnetic Anomaly. The flux of electron energy deposited per second at SANAE is closely related to geomagnetic activity. (Auth. mod.)

Walker, A.D.M., **Radar studies of magnetosphere dynamics,** *Astrophysics and space science,* Aug. 1995, 230(1-2), p.415-430, Refs. p.429-430.

Ionospheric radars are an important tool for studying magnetospheric dynamics. The nature of such instruments is described and their application to a number of important problems is discussed, emphasizing South African work. A study of the theory of reflection from irregularities is discussed. The nature of ULF pulsations of more than one type has been elucidated by radar studies. An improvement of the understanding of magnetospheric convection has been achieved. A new HF radar experiment being developed for operation at SANAE Station is described. An HF radar will be operated at SANAE in conjunction with the British radar at Halley to provide vector information about magnetospheric convection within that part of the magnetosphere which maps to a large portion of the antarctic continent. The radar will be part of the SuperDARN international network of radars. (Auth.)

Hughes, A.R.W., **VLF waves in the magnetosphere,** *Astrophysics and space science,* Aug. 1995, 230(1-2), p.431-438, 14 refs.

The study of VLF waves at ground-based stations is an important source of information on particles trapped in the magnetosphere. By various techniques it is also possible to measure plasma densities, electric fields and monitor energetic particle injection. By observing the propagation of waves beneath the ionosphere it is possible to study particle precipitation from the magnetosphere. In this paper the author summarizes some of the techniques and results obtained from the study of VLF waves at SANAE Station. (Auth.)

Scourfield, M.W.J., **Auroral research,** *Astrophysics and space science,* Aug. 1995, 230(1-2), p.457-469, 11 refs.

An auroral substorm, unique in that it occurred at the relatively low latitude of SANAE, is described based on the full range of observational techniques at SANAE together with satellite data. Some features fit the generally accepted picture of substorms, others do not. From ground-based television imagery of Giant Undulations the temporal evolution of their dynamics is obtained and possible theories for their existence examined. Super fast auroral waves, with speeds of up to 1200 km/s, have been observed for the first time. Their characteristics cannot as yet be accounted for by a single generation mechanism. The potential value of simultaneous recordings of aurorae by television and riometer is discussed. (Auth.)

Arnoldy, R.L., Engebretson, M.J., **Magnetic impulse events measured at Pc 1 frequencies and at multiple sites,** *Antarctic journal of the United States,* 1994, 29(5), p.317-318, 2 refs.

Magnetic impulse events (MIEs) are impulsive fluctuations in the Earth's ambient magnetic field. These fluctuations have periods that range from a few seconds to several hundred seconds and durations that are on the order of the period. A figure gives an example of an MIE seen at Sondre Stromfjord, Greenland, which is a high-latitude site at the same geomagnetic latitude as South Pole but 2 hours ahead of South Pole in local time. The high frequency (about 0.5 Hz) Pc 1 waves associated with the MIE are evident. In an analysis of several hundred MIE, these Pc 1 waves are present about 70% of the time. The authors have identified and analyzed some 300 Sondre Stromfjord and South Pole MIE events.

Inan, U.S., Reising, S.C., **Global thunderstorm tracking via measurements of radio atmospherics at Palmer Station,** *Antarctic journal of the United States,* 1994, 29(5), p.319-320, 8 refs.

The VLF measurements at Palmer Station are conducted using highly sensitive VLF antennas and receivers. The relatively quiet (electromagnetically speaking) nature of the site, its geomagnetic conjugacy to major thunderstorm centers in the east coast of the United States, and its proximity to the South Atlantic magnetic anomaly make Palmer Station a unique site for these studies. During the past 2 years, an additional potential use of the Palmer VLF data has emerged. It now appears that thunderstorm activity on a global scale can be tracked with the help of VLF measurements at Palmer Station. In this article, the authors illustrate two examples of the use of the VLF Fourier goniometry technique with Palmer data.

Engebretson, M.J., Alford, J.L., Goerke, R.T., **Study of seasonal variations in the occurrence and characteristics of quasiperiodic very-low-frequency emissions,** *Antarctic journal of the United States,* 1994, 29(5), p.321-322, 4 refs.

At high latitudes, radio emissions with frequencies ranging from approximately 500 to 2,000 Hz are often found to be modulated quasiperidically at much lower frequencies near 0.03 Hz in the ultra-low-frequency (ULF) range. Using 1988 data from Amundsen-Scott Station, the authors have found seasonal variations in the radio frequency of these "quasiperiodic" or QP emissions that provide information about processes in a high-latitude region of the Earth's outer magnetosphere that has seldom been explored by spacecraft. Although most magnetospheric wave-generation processes had been assumed to take place at the equator, this study indicates the importance of off-equatorial wave sources in the outer dayside magnetosphere.

Clark, K.C., Hernandez, G., Smith, R.W., **Wide-aperture light source,** *Antarctic journal of the United States,* 1994, 29(5), p.327-329, 2 refs.

Quantitative investigations of emission line profiles by use of a Fabry-Perot spectrometer require periodic calibration of the optical finesse of the instrument. In a laboratory setting, this calibration procedure is relatively straightforward: it consists of measuring the reflection coefficients of the Fabry-Perot flats in a suitably equipped laboratory. To calibrate operating field instruments, however, such as the Fabry-Perot spectrometer running at Amundsen-Scott Station, specialized procedures must be employed to avoid disturbing the critical alignment of the spectrometer elements. The authors use the Giacomo method of measuring Fabry-Perot etalon reflection coefficients, coupled with single wavelength laser measurements, to determine the overall instrumental finesse. To conduct these etalon reflectivity measurements with no disturbance of alignment, they have developed a new thin, large-aperture, broadband continuum-light source.

Jefferies, S.M., Duvall, T.L., Jr., Harvey, J.W., **Helioseismology from South Pole: a clear view of the Sun,** *Antarctic journal of the United States,* 1994, 29(5), p.331-332, 3 refs.

Helioseismology is the study of the composition and physics of the Sun's interior and atmosphere via observations of its acoustic oscillations. These oscillations are manifest as intensity and velocity perturbations of the solar surface. One way to observe them, therefore, is to record the temporal and spatial variations of the solar intensity distribution. This can be done by imaging the full solar disk onto a two-dimensional detector such as a charge-coupled device. Unfortunately, any recorded image is inevitably a blurred measure of the intensity distribution that one is trying to measure. The authors have developed a technique for measuring the blurring function directly from each recorded image together with a deconvolution procedure to use this information to restore the image photometrically. The improvement in image quality produced by the restoration is dramatic and is demonstrated in solar disc images taken at South Pole.

AMANDA Collaboration, **First data and future prospects for AMANDA, the antarctic muon and neutrino detector,** *Antarctic journal of the United States,* 1994, 29(5), p.337-339, 3 refs.

The AMANDA high-energy neutrino observatory will address fundamental questions in astronomy and particle physics. AMANDA can search for the sources of the highest energy cosmic rays and for dark matter; it can address the question of whether neutrinos have mass; and it can look for entirely unanticipated phenomena. In contrast to high-energy photons, which are absorbed by matter, high-energy neutrinos can help scientists do a tomographic study of such objects as active galactic nuclei and even the Earth's core.

K-55134

Evenson, P., et al, **South Pole air shower experiment,** *Antarctic journal of the United States,* 1994, 29(5), p.339-341, 4 refs.

Since Feb. 1994 the South Pole air shower experiment (SPASE) has been running in coincidence with 4 strings of the antarctic muon and neutrino detector array (AMANDA) experiment that were deployed during the 1993-94 austral summer. The air shower array consists of 16 scintillatory detectors, each of 1 m^2 area, on a triangular grid with 30 m spacing. In addition, there are 8 guard ring detectors on an approximately 80 m radius, which are similar in size and construction, except that they lack the fast-timing capability of the central detectors. When the surface array is triggered by a cosmic-ray cascade in the atmosphere, a signal is transmitted in the AMANDA central station to read out its data.

Rosenberg, T.J., Doolittle, J.H., **Studying the polar ionosphere and magnetosphere with automatic geophysical observatories: the U.S. program in Antarctica,** *Antarctic journal of the United States,* 1994, 29(5), p.347-349, 10 refs.

This AGO science program is called the polar experiment network for geophysical upper-atmosphere investigations (PENGUIN) and is the product of a team of U.S. and Japanese investigators with long experience in successfully conducting ionospheric and magnetospheric research in Antarctica. The network, when completed, will consist of a suite of instruments (optical and radiowave auroral imagers, magnetometers, and narrow- and wide-band radio receivers) placed at six AGO locations on the polar plateau. The instruments, their designated AGO sites, the responsible principal investigators, and institutions are given in a table.

K-55138

Doolittle, J.H., Mende, S.B., **Coordinated auroral observations at South Pole Station and AGO-P2,** *Antarctic journal of the United States,* 1994, 29(5), p.349-352, 5 refs.

The Amundsen-Scott Station is located at a magnetic latitude of about 74.2°, which places it inside the polar cap during magnetic nighttime where field lines map to the magnetospheric tail. During magnetic midday, the Station is situated under the magnetospheric cusp where the field lines are believed to open to the interplanetary magnetic field. Since the austral winter of 1989, the authors have been using a novel dual-channel all-sky camera that permits simultaneous observations of both 630.0 nm O($^1D_2$) and 427.8 nm N_2^+ auroral emissions to separate the hard and soft precipitation. The system records the local space, time, and energy morphology of auroral precipitation. They have investigated the optical signature of impulsive magnetic events that were interpreted as the ground-based signature of "flux transfer events". These observations have shown that these impulsive events take place on the inner side of the polar cusp, and therefore, if they are to be interpreted as the flux transfer events, then they must be the signature of the initial phase of the event and not the convective phase as it had been interpreted earlier.

K-55139

Rosenberg, T.J., Detrick, D.L., **Coordinated auroral absorption observations at South Pole Station and AGO-P2,** *Antarctic journal of the United States,* 1994, 29(5), p.352-354, 8 refs.

The combination of automatic geophysical observatories (AGOs) and manned stations in Antarctica is intended to facilitate studies of the polar upper atmosphere. In particular, simultaneous observations with essentially similar instrumentation at all sites will enable the separation of spatial and temporal effects and will provide the means to follow the evolution, progression, and decay of geophysical phenomena over great distances. The first opportunity to carry out such investigations involves the use of data from AGO-P2 and Amundsen-Scott Station. The analysis presented here of a Sun-aligned arc observed at two locations using different imaging techniques offers a glimpse of how the data from multiple spaced instruments in the AGO/manned station framework will help to clarify the interpretation of polar upper atmosphere phenomena.

Detrick, D.L., Lutz, L.F., **16-beam phased-array radiowave imager for studies of cosmic noise absorption at U.S. AGO sites,** *Antarctic journal of the United States,* 1994, 29(5), p.354-356, 4 refs.

A significant improvement in the riometer technique for examining cosmic noise absorption was made with the installation of a 49-beam phased array riometer system at Amundsen-Scott Station in Jan. 1988. The use of antenna arrays producing multiple narrow beams is necessary to examine the spatial scale of regions of energetic electron precipitation that are coincident with cosmic radio noise absorption activity and to resolve time development from spatial motion. The power requirements for the antenna/phasing system are minimal. The designed total electrical power budget for the system is shown in a table. In operation, the system typically consumes about 4.8 watts, with occasional increases to 6.7 watts when the internal heaters activate to bring the interior temperature to the designed operating level of -10°C.

K-55141

Detrick, D.L., Rosenberg, T.J., **Initial results from the PENGUIN imaging riometer at AGO-P2,** *Antarctic journal of the United States,* 1994, 29(5), p.356-358, 5 refs.

PENGUIN (the polar experiment network for geophysical upper-atmosphere investigations) represents the science programs associated with the automatic geophysical observatories (AGOs) deployed on the antarctic plateau. The first AGO was installed in Dec. 1992. The site, which has been designed P2, was the first of six planned AGO installations to be deployed. The PENGUIN program studies the upper atmosphere using a variety of instruments that provide information for the analysis and interpretation of phenomena that affect the Earth's near-space environment.

K-55142

Inan, U.S., Brown, A.D., Yarbrough, J., **Initial results from the PENGUIN ELF/VLF receiver at AGO-P2,** *Antarctic journal of the United States,* 1994, 29(5), p.359-361, 5 refs.

The subject of electrodynamic coupling of upper atmospheric regions and quantitative understanding of the energy transport between the magnetosphere and the ionosphere constitute important objectives of the polar experiment network for geophysical upper-atmosphere investigations (PENGUIN) program. Measurements of ELF/VLF waves at multiple stations provide a powerful means of remotely sensing magnetospheric processes. The event that the authors illustrate in this article was recognized by viewing summary plots of narrowband ELF/VLF channels (also referred to as hiss filters) of data recorded at P2 for the 9-day period of May 23-31, 1993, for which AGO-P2 data were made available to the PENGUIN investigators. On May 25, 1993, very intense and relatively short duration wave activity was observed in all channels, during an otherwise extremely quiet period. Insight into the wave phenomena is provided in a figure, where synoptic wideband data recorded at South Pole is shown. Also shown for comparison are the 2-4 kHz channel outputs recorded at P2 and South Pole: one sees that the wave activity reaches its peak approximately 5 minutes later at South Pole than at P2 and that the absolute intensities of the waves are nearly twice as large at P2 as at South Pole.

Weatherwax, A.T., LaBelle, J., Trimpi, M.L., **Auroral radio emissions observed at AGO-P2,** *Antarctic journal of the United States,* 1994, 29(5), p.363-364, 3 refs.

The AGOs on the antarctic polar plateau provide an excellent platform from which to study high-latitude ionospheric processes. In particular, the AGOs provide an exceptionally quiet electromagnetic environment for the operation of radio receivers in the low-frequency/medium-frequency/high-frequency (LF/MF/HF) bands. During the 1992-93 austral summer, this type of radio receiver was incorporated into the first of six proposed AGOs (AGO-P2). A list of the experiments aboard AGO-P2 is given in a table. Preliminary data taken from only 1 week of operation at AGO-P2 are discussed.

Weatherwax, A.T., LaBelle, J., Trimpi, M.L., **Comparison of electromagnetic noise at ground-based radio observing sites,** *Antarctic journal of the United States,* 1994, 29(5), p.365-366, 3 refs.

Although sporadic reports of ground-based LF-HF radio emissions from aurora have appeared during the past 4 decades, only in the last few years has a concerted effort been made to monitor radio emissions systematically in the frequency range between 100 kHz and 5 MHz on the ground. Dartmouth College has operated six radio receiving systems in the high-latitude regions at specific locations, two sites in Alaska and four sites in Antarctica. Essentially identical instrumentation is employed at all six sites. A figure shows five spectra from each of the observing sites listed in the table. Overall, the three electromagnetically quietest sites are AGO-P1, -P2, and -P4; AGO-P1 is the noisiest of the three AGO sites. In contrast, the noisiest site overall is at Amundsen-Scott Station. South Pole data were obtained during the busy summer season, however, when electromagnetic interference would be at its highest. Nonetheless, it does represent the noisiest of the four antarctic locations studied during the 1993-94 austral summer.

Wolfe, A., Lanzerotti, L.J., Maclennan, C.G., Arnoldy, R.L., **Simultaneous enhancement of Pc1, Pc4, Pc5 hydromagnetic waves at AGO-P2, Antarctica,** *Antarctic journal of the United States,* 1994, 29(5), p.366-368, 12 refs.

Simultaneous observations of several narrow-band magnetic fluctuations in the hydromagnetic wave band are reported from the new AGO site P2 near the auroral zone in the Antarctic. These magnetic pulsations are found in the Pc1 (approximately 1 Hz), Pc4 (approximately 100-second period) and Pc5 (approximately 300-second period) bands. These observations, recorded on the ground during very quiet geomagnetic conditions, may be the first reported pulsations extending across a broad band of the Pc frequency regime.

Fukunishi, H., Taguchi, M., Lanzerotti, L.J., **Pc1-2 pulsations observed by a search-coil magnetometer at AGO-P2,** *Antarctic journal of the United States,* 1994, 29(5), p.369-371, 10 refs.

The first automatic geophysical observatory (AGO) for the polar experiment network for geophysical upper-atmosphere investigations (PENGUIN) was deployed at site P2 in Dec. 1992. The PENGUIN data at P2 were continuously recorded on an optical disk until the end of May 1993 when the data-acquisition system suffered a failure. The recorded data were recovered in Dec. 1993. The purpose of the AGO search-coil magnetometer experiment is to study the generation and propagation mechanisms of high-latitude magnetic variations in the frequency range of 0.001-1.0 Hz. This article presents a preliminary analysis of the search-coil data, focusing on the frequency range of 0.1-1.0 Hz.

Vovk, V.IA., **Reverse signal parameters from the data of oblique sounding in the Antarctic,** *Geomagnetism and aeronomy,* Feb. 1995, 34(4), p.553-555, Translated from Geomagnetizm i aeronomiia, July-Aug. 1994. 9 refs.

The highest observed frequencies (HOF) and lowest observed frequencies (LOF) as well as variations of amplitude and Doppler parameters of signals from oblique ionospheric sounding depend on the orientation of the radiocircuit relative to large-scale ionosphere structures. Changes in the LOF and Doppler spectra of reverse signals are due to the intersection of ionospheric radiocircuits with irregularities in the polar cap region. An excess of more than 100% in experimental values of the HOF for the reverse signals over the calculated values at 0600-1700 UT can be explained by ionospheric anomalies or by different propagation mechanisms, in particular by the deflection of the path from the great circle arc. (Auth.)

Burton, M.G., **Why Antarctica?,** *Astronomical Society of Australia. Publications,* Jan. 1996, 13(1), p.2-6, 15 refs.

The dry, cold, tenuous and stable air above the Antarctic Plateau provides superb conditions for the conduct of many classes of astronomical observations. The author reviews in particular the rationale for undertaking near-IR, mm and particle astronomy in Antarctica, disciplines in which telescopes are now operating at the U.S. Amundsen-Scott Station. (Auth.)

K-55173

Bailey, J., **Infrared surveys from Antarctica,** *Astronomical Society of Australia. Publications,* Jan. 1996, 13(1), p.7-9, 9 refs.

The very low background observed from Antarctica in a window from about 2.25 to 2.45 μm can be exploited as a way of making deep near-IR surveys over wide areas of sky. Imaging surveys using the entire window can cover large areas of sky to limits of around K=20, and can be used to study galaxy evolution and to search for high-redshift quasars, dust-obscured quasars and brown dwarfs. It is also possible to make spectroscopic surveys in this window. The window includes molecular hydrogen emission and CO absorption in galactic sources, and can also be used to search for emission lines such as Hα in high-redshift star-forming galaxies. (Auth.)

Viotti, R., Vignato, A., Nanni, D., Maceroni, C., Badiali, M., **Astrophysical value of continuous photometric monitoring from the Antarctic Plateau,** *Astronomical Society of Australia. Publications,* Jan. 1996, 13(1), p.10-13, 9 refs.

Among the astrophysical researches which will largely benefit from observation from the Antarctic Plateau, the authors consider those which require high-quality, continuous, daylight, uninterrupted observation in the optical-near-IR region. The systematic study of the stellar micro-oscillations and surface activity of individual objects, as well as of stellar associations extended for periods of weeks, will make a fundamental contribution to the knowledge of stellar structure and will ultimately provide the physical parameters of the stars. A similar consideration applies for the short-period (a few hours to a few days) binaries, which include the W UMa contact binaries. These objects are subject to continuously varying light curves associated with surface activity and secular effects, which cannot be adequately studied from the currently available ground telescopes. (Auth. mod.)

Balm, S.P., **Antarctic Submillimeter Telescope and Remote Observatory (AST/RO),** *Astronomical Society of Australia. Publications,* Jan. 1996, 13(1), p.14-16, 9 refs.

The Antarctic Submillimeter Telescope and Remote Observatory (AST/RO) is a highly automated 1.7 m diameter telescope aimed at exploiting the superb submillimeter skies of the Antarctic Plateau for astronomy and aeronomy studies. It was recently installed at the Amundsen-Scott Station during the 1994-95 austral season and is currently undergoing its first winter-over of operation. In this paper, the author briefly outlines the capabilities of the instrument and describes some recent achievements culminating in the telescope's first observations of the South Polar submillimeter sky. Bally, J., et al, **Hartmann Differential Image Motion Monitor (H-DIMM) for atmospheric turbulence characterisation,** *Astronomical Society of Australia. Publications,* Jan. 1996, 13(1), p.22-27, 7 refs.

The authors describe the use of a multi-aperture Hartmann mask coupled to a slightly out-of-focus focal plane array imager to monitor atmospheric turbulence ('seeing') produced by refractive index fluctuations. The H-DIMM method was first used at the South Pole in Jan. 1995, with a 6 in. *f*/10 refractor (the Volna telescope) using a three-aperture mask. During 1995, they are using an H-DIMM mounted on the SPIREX telescope that is now located on top of a tower next to the CARA building at the South Pole, well isolated from local heat sources. They will be obtaining H-DIMM measurements using a video camera with the 24 in. SPIREX telescope and through a Celestron 11 in. telescope that is mounted on the side with an ST-6 camera. (Auth. mod.)

Storey, J.W.V., Ashley, M.C.B., Burton, M.G., **Automated astrophysical observatory for Antarctica,** *Astronomical Society of Australia. Publications,* Jan. 1996, 13(1), p.35-38, 5 refs.

Conditions on the high Antarctic Plateau would appear to be extremely favorable for a wide range of astronomical research. Before a decision can be made on constructing an observatory, data are required on site conditions at the most promising locations. To enable these data to be collected, a Lockheed Automated Geophysical Observatory is being purchased. This facility will be fitted with a suite of astronomical site-testing instruments and deployed to several sites on the Antarctic Plateau. This program will allow a definitive assessment of the site conditions to be made by the end of this century. (Auth.)

Dopita, M.A., Ford, H.C., Bally, J., Bely, P., **POST: a polar stratospheric telescope for the Antarctic,** *Astronomical Society of Australia. Publications,* Jan. 1996, 13(1), p.48-59, 8 refs.

The tropopause, typically at 16 to 18 km altitude at the lower latitudes, dips down to only 8 km in the polar regions, allowing access to the cold, dry and nonturbulent lower stratosphere by tethered aerostats. These can float as high as 12 km, have long operating lifetimes, and are extremely reliable. In contrast to free-flying balloons, they can stay on station for weeks at a time, and payloads can be safely recovered for maintenance and adjustment and relaunched in a matter of hours. The authors propose to use such a platform, located in the Antarctic, to operate a new-technology 4 m telescope with diffraction-limited performance in the near infrared. Thanks to the low ambient temperature ($\approx$200 K), thermal emission from the optics is of the same order as that of the zodiacal light in the 2-3 µm band. (Auth. mod.)

Inan, U.S., Reising, S.C., Fishman, G.J., Horack, J.M., **On the association of terrestrial gamma-ray bursts with lightning and implications for sprites,** *Geophysical research letters,* May 1, 1996, 23(9), p.1017-1020, 18 refs.

Measurements of ELF/VLF radio atmospherics (sferics) at Palmer Station provide evidence of active thunderstorms near the inferred source regions of two different gamma-ray bursts of terrestrial origin [Fishman et al., 1994]. In one case, a relatively intense sferic occurring within ±1.5 ms of the time of the gamma-ray burst provides the first indication of a direct association of this burst with a lightning discharge. This sferic and many others launched by positive cloud-to-ground (CG) discharges and observed at Palmer during the periods studied exhibit 'slow tail' waveforms, indicative of continuing currents in the causative lightning discharges. The slow tails of these sferics are similar to those of sferics originating in positive CG discharges that are associated with sprites. (Auth.)

Yahnin, A.G., Sergeev, V.A., **Simultaneous satellite and ground-based observations of polar cap aurora,** *Advances in space research,* 1996, 18(8), p.(8)111-(8)114, 11 refs.

On Aug. 20, 1979 (15-17 UT) sun-aligned polar cap arcs were observed at Vostok Station. Simultaneously, NOAA polar spacecraft detected in the polar cap a several hundred km wide region of electron and proton precipitation over these arcs, and a similar precipitation structure was also observed in the northern polar cap. Within these auroral precipitation regions (interpreted as a signature of the T-aurora) some >30 keV proton precipitation has been also found with intensities comparable to those in the auroral zone. These observations suggest that the T-aurora precipitation has its origin on the closed field lines of the plasma sheet. (Auth.)

Liu, C.F., Liu, C.J., Yang, Y.H., Wang, Y., **Change characteristics of magnetic storm in antarctic Zhongshan Station and Beijing Ming Tombs Magnetic Observatory Center of China on March 24, 1991,** *Antarctic research (Chinese edition),* 1996, 8(1), p.53-58, In Chinese with English summary. 7 refs.

Change characteristics of the magnetic storm of Mar. 24, 1991 are analyzed showing different physical processes at middle-low latitudes and in the southern polar cusp region. The magnetic sudden commencements at Zhongshan Station is SC. The magnetic main phase is composed of a series of intense substorms. At Beijing Ming Tombs Magnetic Observatory Center, the magnetic sudden commencement is SC, the magnetic main phase duration is shorter and the change is greater. This event was caused by solar activities such as increases of the sunspot numbers, and the occurrence of a 3b optical flare on Mar. 22, 1991. (Auth.)

Ebihara, Y., et al, **Convection enhancement event observed with the Polar Patrol Balloon #4,** NIPR Symposium on Upper Atmosphere Physics, Proceedings. No.9, Tokyo, National Institute of Polar Research, Feb. 1996, p.12-24, 14 refs.

A convection enhancement event was observed by Polar Patrol Balloon #4 which was launched at Showa Station on Dec. 26, 1992. This event occurred during 1700-1900 UT on Dec. 28, when the balloon was located in the afternoon sector of the sub-auroral zone. During this period, the amplitude of the southward electric field (E_s) increased from about 20 mV/m to 50 mV/m, and then decreased to 20 mV/m again. The northward component of the magnetic field variation (B_H) also increased from 200 nT to 600 nT, and then decreased to about 100 nT. The maximum time of E_s lagged about 12 min after the B_H maximum time (t_{BMAX}). From the ground-based data in the Southern and Northern Hemisphere and also satellite IMF data, it was concluded that this event was not an isolated disturbance confined just to the balloon location, but was a global feature of the ionospheric convection variation corresponding to the IMF fluctuation. (Auth. mod.)

Makita, K., Ayukawa, M., **Polar cusp, plasma mantle particles and their relationships to polar rain,** NIPR Symposium on Upper Atmosphere Physics, Proceedings. No.9, Tokyo, National Institute of Polar Research, Feb. 1996, p.25-33, 22 refs.

On the basis of low altitude DMSP satellite particle data, characteristics of polar rain, cusp and plasma mantle are examined during an asymmetric polar rain enhancement period. Results obtained are summarized as follows: from the comparison between number flux of cusp and polar rain precipitations, the cusp flux does not increase correlatively with the increasing of polar rain flux. This result suggests that sources of precipitating particles are quite different from each other. Low energy pulsive electrons (plasma mantle) are occasionally observed in the polar rain region. These plasma mantle particles are observed in both hemispheres and the polar rain enhancement shows hemispheric asymmetry. The mixing of polar rain and plasma mantle perhaps occurred due to the movement of plasma mantle by electric field drift. (Auth.)

Watanabe, T., **Influences of solar-terrestrial events on atmospheric environment over Syowa Station, Antarctica: a preliminary analysis of radiosonde observations,** NIPR Symposium on Upper Atmosphere Physics, Proceedings. No.9, Tokyo, National Institute of Polar Research, Feb. 1996, p.42-55, 9 refs.

Radiosonde observations at Showa Station are analyzed to determine the stratospheric and tropospheric influence of solar-terrestrial phenomena in 1967-1993. Although the level of statistical significance is generally low, mean temperature changes of 1-2°C are seen after solar proton events; these include transient warming in the lower stratosphere and cooling in the troposphere. The most significant temperature changes appeared during the East phase of quasi-biennial oscillation (QBO<0). The presence of a weak correlation with the phase southern oscillation index (SOI) is also suggested. Only very low-level correlations are found for Forbush decreases of galactic cosmic rays and geomagnetic activities. (Auth.)

K-55375

Minatoya, H., Sato, N., Saemundsson, T., Yoshino, T., **Systematic analysis of auroral conjugacy: an application to periodic pulsating aurora (Extended abstract),** NIPR Symposium on Upper Atmosphere Physics, Proceedings. No.9, Tokyo, National Institute of Polar Research, Feb. 1996, p.63-66, 8 refs.

Previous studies have revealed that auroras near the conjugate regions in both hemispheres do not necessarily show conjugacy. These results were obtained mainly from qualitative analyses using simultaneous all-sky images observed in both hemispheres. However, this kind of qualitative analysis does not provide a quantitative measure of the degree of conjugacy. The authors have developed an analysis system which is useful for the quantitative study of auroral conjugacy. A figure shows the analysis procedure for the present auroral conjugate study using this system. This method was applied to periodic pulsating auroral events obtained by SIT-TV cameras at the nearly geomagnetic conjugate stations of Husafell in Iceland and Showa and Asuka stations in Antarctica, during the period from 2254 to 2256 UT on Sept. 9, 1991. The locations of the conjugate stations are listed in a table. (Auth. mod.)

K-55376

Sato, N., Nagaoka, T., Saemundsson, T., **Time lag of auroral breakup in conjugate hemispheres (Extended abstract),** NIPR Symposium on Upper Atmosphere Physics, Proceedings. No.9, Tokyo, National Institute of Polar Research, Feb. 1996, p.72-74, 2 refs.

The most useful method to examine how to connect the geomagnetic field lines, "mapping of geomagnetic field lines" between both hemispheres, is to use conjugate visible auroras. Using a limited data set of visible conjugate auroras, the authors found an excellent event observed by all-sky TV camera. The event occurred on Sep. 12-13, 1988 on a clear night with no moonlight interference at Showa Station and Husafell. This event is one of the best examples to examine conjugacy of small scale auroral arcs since 1984 when the Showa-Iceland conjugate campaign started. Isolated auroral arcs were observed over the zenith from the two stations. The spatial resolution of auroras hence is very high and it is easy to compare and identify one to one correspondence for the fine structure of conjugate auroras.

Watanabe, O., Saka, O., Baker, D.N., **Comparative study of auroral modulation and ground Pi2 oscillations (Extended abstract),** NIPR Symposium on Upper Atmosphere Physics, Proceedings. No.9, Tokyo, National Institute of Polar Research, Feb. 1996, p.79-82, 1 ref.

A comparative study was carried out to investigate the correlation between periodic drift of auroral patches and ground Pi2 oscillations during the substorm event that occurred at 2239 UT June 16, 1986. The substorm started with auroral break-up in the field-of-view of Showa Station in the pre-midnight sector in association with the ground Pi2 onset at Huancayo, Peru (1805 LT meridian). The authors found that magnetic oscillations of the ground Pi2 pulsations were correlated fairly well with a periodic westward drift of auroral patches that appeared during the diminishing phase of the Westward Traveling Surge.

Innis, J.L., Greet, P.A., Dyson, P.L., **Fabry-Perot spectrometer observations of the auroral oval/polar cap boundary above Mawson, Antarctica,** *Journal of atmospheric and terrestrial physics,* Dec. 1996, 58(16), p.1973-1988, 31 refs.

Zenith observations of the oxygen λ630 nm auroral/airglow emission (produced at an altitude of ca. 220 to ca. 250 km) were obtained at Mawson Station with a Fabry-Perot spectrometer during three 'zenith direction only' observing campaigns in 1993. The data show many instances of strong (50 to 100 m/s) upwellings in the vertical wind, when the auroral oval is located equatorward of the zenith. The data appear consistent with the existence of a region of upwelling up to 4° poleward of the poleward boundary of the visible auroral oval, rather than short duration, explosive heating events. The upwellings are probably the vertical component of wind shear produced by reversal of the zonal thermospheric winds, which occurs near the poleward boundary of the visible auroral oval. Zenith temperature was also seen to increase when the oval was equatorward of Mawson, showing rises of up to 300 K or more. However, this increase is at times unrelated to the upwellings, and seems to be caused by the expansion of the warm polar cap over the observing site. (Auth. mod.)

Rodger, A.S., Graham, A.C., **Diurnal and seasonal occurrence of polar patches,** *Annales geophysicae,* May 1996, 14(5), p.533-537, Refs. p.536-537.

Analysis of the diurnal and seasonal variation of polar patches, as identified in two years of HF-radar data from Halley Station during a period near sunspot maximum, shows that there is a broad maximum in occurrence centered about magnetic noon, not local noon. There are minima in occurrences near midsummer and midwinter, with maxima in occurrences between equinox and winter. In summer and winter the electron concentrations in the polar cap are high and low, respectively, but relatively unstructured. About equinox, a tongue of enhanced ionization is convected into the polar cap; this tongue is then structured by the effects of the interplanetary magnetic field, but these Halley data cannot be used to separate the various competing mechanisms for patch formation. The observed diurnal and seasonal variations in the occurrence of polar patches are largely consistent with predictions of Sojka et al. (1994) when their results are translated into the Southern Hemisphere. However, the ionospheric effects of flux transfer events are still considered essential in their formation, a feature not yet included in the Sojka model. (Auth. mod.)

Corcuff, Y., **Trimpi events and other amplitude perturbations observed during 1991 at Kerguelen (L=3.7) on the subionospheric North-west Cape (NWC) signal,** *Journal of atmospheric and terrestrial physics,* Aug. 1996, 58(12), p.1367-1390, 49 refs.

In the period Mar.-Nov. 1991, which was characterized by strong magnetic activity, two kinds of complementary VLF data were recorded at the Kerguelen Is.: (1) the amplitude of the subionospheric 22.3 kHz signal from the Northwest Cape (NWC) transmitter in Australia, and (2) the integrated intensity in various VLF bands and broadband waveforms (0.4-10 kHz). Comprehensive analysis of the data allowed one to identify and characterize four types of well-structured perturbations in the NWC signal amplitude, i.e.: classical Trimpi events associated with whistlers; hiss-induced electron precipitation events; inverted dome-shaped events identifiable with dome-shaped events recently observed at Durban by Friedel et al. (1993); and quasi-monochromatic oscillations with a period of ≈7-15 s observed when Kerguelen is poleward of the plasmapause projection in the pre-dawn sector, similar to the zigzag effect described by Carpentër et al. (1985a). The purpose of this paper is to report on the results of investigations devoted to these various types of event; each of them is illustrated by examples. (Auth. mod.)

Klekociuk, A.R., Burns, G.B., **Parameters of the O(^{1}S) excitation process deduced from photometer measurements of pulsating aurora,** *Journal of atmospheric and terrestrial physics,* Dec. 1995, 57(14), p.1799-1814, 23 refs.

Intensity time-series of the 427.8 nm N_2^+(1NG) (0,1) band and 557.7 nm O(^{1}S-^{1}D) line emissions were obtained at Macquarie I. with 0.05 s time resolution during intervals of pulsating aurora. Using an impulse response function analysis technique in conjunction with synthetic intensity time-series constructed using measured data, the authors estimate the influence of measurement noise and a non-linear component of the covariance between the 557.7 nm and 427.8 nm intensity time-series on the inferred parameters of an O(^{1}S) indirect excitation model. Non-linearities between the auroral emissions limit the determination of the O(^{1}S) effective lifetime by this technique. An O(^{1}S) effective lifetime distribution with a mean of 0.71 s and a sharp cut-off at the radiative lifetime of ≈0.80 s is obtained. (Auth. mod.)

Clilverd, M.A., Thomson, N.R., Smith, A.J., **Ducted whistler-mode signals received at two widely spaced locations,** *Annales geophysicae,* June 1996, 14(6), p.619-627, Refs. p.626-627.

Whistler-mode signals from a single VLF transmitter propagating in the same duct have been observed simultaneously at Faraday Station and Dunedin, New Zealand. The signals received have group-delay times that differ on the order of 10 ms, which can be explained by the differences in Southem Hemisphere sub-ionospheric propagation time from duct exit region to receiver for the two sites. This difference has been used to determine the location of the duct exit region, with confirmation provided by arrival-bearing information from both sites. The whistler-mode signals typically occur one or two days after geomagnetic activity, with $K_p \geq 5$. The sub-ionospheric-propagation model LWPC is used to estimate the whistler-mode power radiated from the duct exit region. These results are then combined with estimated loss values for ionospheric and ducted transmission to investigate the role of wave-particle amplification or absorption. In at least half of the events studied, plasmaspheric amplification of the signals appears to be needed to explain the observed whistler-mode signal strengths. (Auth.)

Halzen, F., Jacobsen, J.E., Zas, E., **Ultratransparent antarctic ice as a supernova detector,** *Physical review D,* June 15, 1996, 53(12), p.7359-7361, 13 refs.

The authors have simulated the response of a high energy neutrino telescope in deep antarctic ice to the stream of low energy neutrinos produced by a supemova. The passage of a large flux of MeV-energy neutrinos during a period of seconds will be detected as an excess of single counting rates in all individual optical modules. The authors update here a previous estimate of the performance of such an instrument, taking into account the recent discovery of absorption lengths of several hundred meters for near-UV photons in natural deep ice. The existing AMANDA detector thus can, even by the most conservative estimates, act as a galactic supemova watch. (Auth. mod.)

Kato, K., **Anomaly in the orientation angle of morning side Pc5 geomagnetic pulsations observed at Syowa Station,** *Antarctic record,* Mar. 1996, 40(1), p.1-14, In Japanese with English summary. 17 refs.

The purpose of this study is to explain the anomaly in the orientation of the polarization axis of moming side Pc5 pulsations at SYOW (Showa Station) and 4 stations near SYOW, two of which are located tens of km away from SYOW and hundreds of km from the other two antarctic stations. The results are as follows: the anomaly in the orientation of polarization axis of Pc5 pulsations is large at SYOW with no local time dependence; the anomaly is related to the difference in the phase of the H and the D components. It is especially affected by the phase variations of the D component; the phase of the H component of Pc5 pulsations at SYOW shows about 10° lead and that of the D component about 30° lag. It is inferred that the origin of the anomaly of the orientation of polarization axis of Pc5 pulsations at SYOW is caused by a local effect due to inhomogeneous electric currents induced underground around SYOW. (Auth. mod.)

Heaton, J.A.T., Jones, G.O.L., Kersley, L., **Toward ionospheric tomography in Antarctica: first steps and comparison with dynasonde observations,** *Antarctic science,* Sep. 1996, 8(3), p.297-302, 15 refs.

Total electron content (TEC) measurements obtained at two antarctic stations over 9 months, beginning early in 1994, have been analyzed as a first step to performing ionospheric tomography. Two receiving systems were deployed at the Faraday and Halley stations to monitor signals from a random selection of passes of satellites in the Navy Navigational Satellite System. The resultant measurements of total electron content have been inverted and combined with ionosonde measurements of true height and foF2 to yield two-dimensional contour maps of ionospheric electron density. In spite of the poor geometry of the observations, some 130 satellite passes were found to be suitable for reconstruction using the techniques developed for ionospheric tomography. The contour maps of plasma density have been compared with independent observations of the vertical electron density profile measured by the dynasonde ionospheric sounder at Halley. An example is presented of a deeper trough investigated by the technique, illustrating the potential of the tomographic method for study of an extended spatial region of the ionosphere over hostile terrain. Ruhl, J.E., **Search for anisotropy in the cosmic microwave background radiation,** Princeton, Princeton University, 1993, 149p., University Microfilms order No. 93-34191, Ph.D. thesis. 63 refs.

This thesis describes an instrument designed to search for medium angular scale anisotropies in the cosmic microwave background radiation, and observations made with that instrument from the South Pole. The system is an array of four bolometric detectors cooled to 50 mK, mounted on a $^3/_4$ m off-axis prime focus telescope. The detectors are sensitive to radiation near λ=3 mm. Two weeks of data were acquired, and statistically significant deviations from zero signal were found at the $\Delta T_a \approx 100\ \mu$K level. Uncertainty with possible foreground sources prevents the identification of the origin of these signals. (Auth.)

Nguyen, H.T., **Search for small angular scale anisotropy in cosmic background radiation at 90 GHz from the South Pole,** Princeton, Princeton University, 1993, 76p., University Microfilms order No. 94-07119, Ph.D. thesis. 35 refs.

This thesis reports on a search for arc minute scale anisotropy in cosmic microwave background radiation observed from the South Pole during the austral summer 1992-93. The telescope operated with a 50 mK bolometric detector, using a single mode waveguide, over a bandwidth of 30 GHz, centered at 90 GHz, where the emission from the known celestial foreground sources is at a minimum. The differential measurement was made using a cassegrain telescope, with the subreflector spinning about the primary axis. This technique gives small offsets in the second harmonic, and is sensitive over a wide range of angular scales. Descriptions of the instrument, the observations and the data analysis are presented. The telescope reached a level of ΔT_{rms} approximately equal to 11 μK after 85 hours of integration time. (Auth.)

Rust, D.M., Murphy, G., Strohbehn, K., Keller, C.U., **Balloon-borne polarimetry,** *Solar physics,* 1996, 164(1-2), p.403-415, 10 refs.

For about two weeks in 1995, the balloon-borne Flare Genesis Experiment (FGE) will continuously observe the sun well above the turbulent, image-blurring layers of the Earth's atmosphere. The polarization-free 80 cm telescope will supply images to a liquid-crystal based vector magnetograph, which will measure magnetic features at a resolution of 0.2 arcsec. An electrically tunable lithium-niobate Fabry-Perot provides a spectral resolution of about 0.015 nm. In a follow-up series of antarctic balloon flights, the FGE will provide unprecedented details on sunspots, flares, magnetic elements, filaments, and the quiet solar atmosphere. (Auth.)

Smith, A.J., **Aspects of wave-particle interactions at mid-latitudes,** *Advances in space research,* 1996, 17(10), Coupling between magnetospheric and ionospheric plasmas: Proceedings of the D2.2 Meeting of COSPAR Scientific Commission D and the C1.3 Meeting of COSPAR Scientific Commission C held during the 30th COSPAR Scientific Assembly, Hamburg, Germany, 11-21 July 1994. Edited by J.U. Kozyra and C.E. Rasmussen., p.(10)213-(10)222, 46 refs.

Lightning-induced electron precipitation (LEP) and its ionospheric signature is the subject of this paper. Although LEP may be detected and studied by a variety of methods, a technique using ground-based narrowband VLF receivers to measure the Trimpi effect caused by LEP-associated ionization enhancements has become increasingly popular due to its simple instrumentation and wide field of view. Most work has concentrated on the $2<L<3$ region where conditions are most favorable for the Trimpi effect. In order to use the technique to study in detail the characteristics and distribution of LEP using a network of intersecting transmitter-receiver great-circle paths (TRGCPs), a consensus on how to interpret the observational data is crucial. Whilst most studies suggest that only LEP within ca. 200 km of the TRGCP gives rise to an observable Trimpi event, some have suggested that non-gaussian perturbations well off the TRGCP can be important. In this paper, the current state of LEP research is summarized and some recent results are presented, using data from a network of both widely and closely spaced observing sites in Antarctica. Rauscher, B.J., Hereld, M., Nguyen, H.T., Severson, S., **South Pole Infrared Explorer (SPIREX): near infrared astronomy at the South Pole,** Astronomical Society of the Pacific, Conference Series, Vol.79. Robotic telescopes: current capabilities, present developments, and future prospects for automated astronomy. Proceedings of a symposium held as part of the 106th Annual Meeting of the Astronomical Society of the Pacific, Flagstaff, AZ, 28-30 June 1994. Edited by G.W. Henry, and J.A. Eaton, San Francisco, CA, USA, Astronomical Society of the Pacific, 1995, p.195-204, 2 refs.

DLC QB88.R615 1995

During the 1993-94 austral summer, the authors deployed the first generation South Pole Infrared Explorer (SPIREX) to the South Pole. The current SPIREX system consists of a 60 cm telescope, a near infrared spectrometer and imager, associated support systems, computers and software. The harsh climate at the South Pole dictates that all of SPIREX's systems be designed for remote operation. Remote operation is also necessary for the highly automated deep surveys planned to begin in 1995. Preliminary analysis of data monitored since Apr. 1994 indicates that the near infrared sky is significantly darker at the South Pole than at warm sites. This paper outlines the background measurement experiment. A future paper will provide quantitative results and analysis. In July 1994, SPIREX observed Comet Shoemaker-Levy 9's collision with Jupiter. SPIREX was unique among earth-based sites in having a nearly uninterrupted view of Jupiter during the collision period. SPIREX observed 16 impacts and obtained baseline coverage between impacts. (Auth. mod.)

Vanina, L.B., Kokin, G.A., Kniazev, A.K., **Electron concentration and meteorological parameter variations in the ionospheric D region at Molodezhnaia Station during the proton events in October 1989,** *Geomagnetism and aeronomy,* Jan./Feb. 1995, 35(1), p.137-140, Translated from Geomagnetizm i aeronomiia. 7 refs.

Results are presented of simultaneous rocket measurements of the electron concentration, temperature, and zonal and meridional components of the stratospheric wind velocity above Molodezhnaya Station during the strong solar proton events of Oct. 1989. A sharp increase of N_e(h) above 50 km and lowering of the D region boundary down to 40 km were detected. A possible contribution is discussed of hard X rays and of solar cosmic rays in the observed effects. Anomalies in the temperature and wind regime of the stratomesosphere above Molodezhnaya were observed in the same periods as the solar proton events. (Auth.)

Needleman, H.C., **NASA Balloon Program: conventional and long duration,** *Advances in space research,* May 1996, 17(9), p.(9)29-(9)35, 17 refs.

The U.S. National Aeronautics and Space Administraton (NASA) Balloon Program has continued to maintain its highly successful performance record in support of scientific ballooning. The Program has broadened its support for the ballooning community through the enhancement of current capabilities and the development of new capabilities. The long duration balloon project has continued to mature; the Antarctic long duration capability has been declared operational, and the successful conclusion of the development effort will be realized in the very near future with the completion of mid-latitude long duration capability. Recent years have seen increases in the number and complexity of remote campaign requirements. New ground station support equipment has been implemented, the new mobile launch vehicle has became operational, and new systems have been developed to meet the increasing demands. (Auth. mod.)

Spencer, S., Clark, D., Parnell, T.A., **Design and analysis of the thermal control system for the JACEE high altitude long duration balloon flight,** *Advances in space research,* May 1996, 17(9), p.(9)91-(9)94.

Computer models are used to analyze the thermal behavior of the JACEE high altitude long duration balloon flight gondola launched from the Antarctic. The antarctic flight environment presents the largest unknown factor in the models' design; albedo and solar flux result in a hot flight environment. TRASYS and SINDA thermal models were developed to calculate temperature profiles for the gondola components in this hot flight environment. A comparison of the computer-generated temperature profiles with actual flight temperatures shows a high degree of correspondence. These models can be successfully used to predict the thermal behavior of gondola components for high altitude balloon flights. (Auth.)

Bersanelli, M., et al, **Measurements of the atmospheric emission and variations in the 1-90 GHz range,** *Planetary and space science,* Oct/Nov 1995, 43(10/11), p.1467-1472, 34 refs.

Ground-based measurements of the cosmic background radiation (CBR) are hampered by emission from atmospheric O_2 and water molecules. The authors performed multifrequency measurements of the atmospheric emission in the 1-90 GHz spectral range from two high-altitude sites (White Mountain, CA, and South Pole). A power spectrum analysis of the data shows variations of the atmospheric antenna temperature which exceed, on the time scales of a few hours or more, those expected from radiometer noise and changes in water column density. When combined with real-time measurements of the local profiles of atmospheric pressure, temperature and humidity, the results indicate variations of some 10% of the O_2 emission (both resonant and non-resonant components) on time scales of hours to days, driven by the evolution of the atmospheric pressure profile. These oxygen emission fluctuations appear significantly larger than previously expected, and may affect ground-based CBR experiments. (Auth.)

Tian, B.N., Zhou, X.Q., **Maximum of VLF hiss occurrence in the postnoon sector at cusp latitudes,** *Antarctic research (Chinese edition),* June 1996, 8(2), p.46-51, In Chinese with English summary. 5 refs.

The postnoon sector at cusp latitudes is often characterized by the secondary maximum of the activities or intensities of space physical phenomena, including a stronger upward field-aligned current; the maximum of downward low-energy electron stream; the maximum of upward ion flux; and the maximum of electron density in the F region. In this paper, the electric field intensity of auroral hiss at the Amundsen-Scott Station in 1986 was analyzed statistically. The relationship between the occurrence of VLF aurora hiss and Ap index was also examined. Results show a secondary maximum of occurrence of 31-38 kHz VLF emissions in the postnoon sector; they also show that the position of the maximum agrees with the abnormal plasma region, and that there is a good correlation between occurrence and the Ap index.

Heasley, J.N., Janes, K., LaBonte, B., Guenther, D., Mickey, D., Demarque, P., **Prospect for asteroseismology from ground-based sites,** *Astronomical Society of the Pacific. Publications,* May 1996, 108(723), p.385-394, Refs. p.393-394.

The possibility of detecting p-mode oscillations in Sun-like stars with ground-based telescopes is reexamined. Previous attempts to make such observations with photometric techniques have been limited to subgiant stars in M67 and have illustrated the great difficulties involving in performing ground-based asteroseismology. Substantial gains in observing efficiency can be realized from new diagnostic techniques and improvements in instrumentation, especially with new CCD camera systems. It is shown that for appropriately selected field stars observed with a network of telescopes or at a high-duty-cycle site, it will be possible to detect p-mode oscillations from the ground. An alternative to a network of telescopes for asteroseismology would be to develop a dedicated observatory for this purpose at a high-duty-cycle site, i.e., the Amundsen-Scott Station. The authors estimate the scintillation, the main noise source in asteroseismology at the Pole, by modeling the index of refraction structure parameter from meteorological data. The model results show that at the Pole the variance of the relative intensity fluctuations—i.e., the scintillation—should be a factor of 5 smaller than at Mauna Kea. (Auth. mod.)

Nguyen, H.T., et al, **South Pole near-infrared sky brightness,** *Astronomical Society of the Pacific. Publications,* Aug. 1996, 108(726), p.718-720, 10 refs.

The authors report their finding that the Amundsen-Scott Station is the darkest known Earth-based site for near-infrared astronomical observations. For this reason it has great potential for the most sensitive surveys of distant or faint objects. They find that the south polar sky background is substantially darker in the standard near-infrared *J, H,* and *K* filters and in an optimized K_{DARK} filter centered at 2.36 µm. In particular, the K_{DARK} background at Amundsen-Scott is only 162±67 µJy/arcsec^2 at the zenith. This is consistent with the results described in an accompanying paper by Ashley et al. (1996) and is comparable to the sky brightness measured by high-altitude balloon at 2.4 µm (Matsumoto et al. 1994). (Auth.)

K-55894

Ashley, M.C.B., et al, **South Pole observations of the near-infrared sky brightness,** *Astronomical Society of the Pacific. Publications,* Aug. 1996, 108(726), p.721-723, 15 refs.

To observe the faintest objects in the Universe astronomers require the darkest skies. In the infrared, sensitivities are limited by the thermal emission from the atmosphere and the telescope. By placing a telescope in Antarctica, and exploiting the reduced thermal emission and the natural absence of strong airglow emission between 2.3 and 2.5 µm, one can minimize the sky brightness. In this paper, and in an accompanying paper by Nguyen et al. (1996), the authors provide the first ground-based measurements of this "cosmological window." At 2.4 µm the sky flux can be as low as 50 µJy/arcsec^2, up to two orders of magnitude lower than the corresponding flux at temperate observatories. They also show that substantial reductions in the background can be achieved throughout the 2.9-4.1 µm region. (Auth.)

Clilverd, M.A., Horne, R.B., **Ground-based evidence of latitude-dependent cyclotron absorption of whistler mode signals originating from VLF transmitters,** *Journal of geophysical research,* Feb. 1, 1996, 101(A2), p.2355-2367, 44 refs.

Results are reported of the first multisite campaign using VLF Doppler receivers to detect whistler mode signals in the South Atlantic originating from VLF transmitters in the Northern Hemisphere. The signals at 24 and 21.4 kHz were recorded by a mobile receiver on board the RRS *Bransfield* during Feb.-Mar. 1993 and by an identical system at Faraday Station. The data show that the output power of plasmaspheric ducts varies with latitude, decreasing with increasing L shell between $1.6 \leq L \leq 2.7$. The primary cause of the latitudinal variation in duct output power is absorption via cyclotron resonance with energetic electrons in the plasmasphere. The variation is due mainly to the reduction in resonant energy with increasing L shell which brings more particles into resonance with the wave. Ground-based observations of the absorption of whistler mode signals originating from VLF transmitters can be used as a new way of estimating the energetic electron flux between 1 and 40 keV inside the plasmasphere between $1.6 \leq L \leq 2.7$. Jarvis, M.J., **Quasi-biennial oscillation effects in the semidiurnal tide of the antarctic lower thermosphere,** *Geophysical research letters,* Sep. 15, 1996, 23(19), p.2661-2664, 20 refs.

A continuous 37-year record of the geomagnetic field from Argentine Islands Geomagnetic Observatory at Faraday Station has been analyzed to reveal a 27-month periodicity in the amplitude of the semidiurnal Sq variation in the H-component significant at the 98% level. This indicates the presence of a periodicity in the strength of the semidiurnal tide at dynamo region altitudes matching that of the quasi-biennial oscillation classically observed in the zonal stratospheric winds at equatorial latitudes. It adds to similar observations which demonstrated such an effect in the diurnal Sq range at near-equatorial latitudes but which showed no evidence for its presence at mid-latitudes. (Auth. mod.)

Sridharan, R., Raju, D.P., Narayanan, R., Modi, N.K., Subbaraya, B.H., Raghavarao, R., **Daytime measurements of optical auroral emissions from Antarctica,** *Current science,* Apr. 25, 1995, 68(8), p.830-834, 11 refs.

DLC Q1.C78

Optical instruments and methods used to detect auroral emissions during daytime conditions, and to identify a narrow latitudinal region of energetic particle precipitation at Maitri Station, are discussed. The energetic particles originate within the closed geomagnetic field lines near the plasmapause, and maximize about 0830 h MLT (Magnetic Local Time) (about 1200 UT). Enhanced proton precipitation activity could also be inferred during a moderate geomagnetic storm, suggesting the enhancement/activation of acceleration mechanisms during this event. (Auth. mod.)

Gille, J.C., et al, **Accuracy and precision of cryogenic limb array etalon spectrometer (CLAES) temperature retrievals,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.9583-9601, 36 refs.

The measurement technique is reviewed concentrating on aspects that affect the temperature determination. Comparison of many pairs of retrievals at the same location (near 32°N or 32°S) measured on sequential orbits (time separation of 96 min) shows a precision ranging from approximately 0.8 K at 68 mbar to about 3.5 K at 0.2 mbar, which agrees with simulations incorporating random noise and short-period spacecraft motions. Comparisons of globally analyzed CLAES data with National Meteorological Center (NMC) and U.K. Meteorological Office (UKMO) analyses show general agreement, with CLAES tending to be cooler by about 2 K, except in the tropics and high-latitude winter conditions. This is supported by comparisons with individual radiosondes and several lidars that indicate that the agreement is within 2 K throughout the profile (except for a narrow layer around 3 mbar). An error analysis also indicates that systematic errors should be roughly 2 K, independent of altitude. The systematic differences at low latitudes appear to be due to tropical waves, which have vertical wavelengths too short to be seen by the TIROS Operational Vertical Sounder (TOVS) instruments. There are no correlative rocketsondes or lidars to help resolve the reasons for the high-latitude differences. The area of surveillance extends to 75°- 80° N and S. (Auth. mod.)

Kumer, J.B., et al, **Comparison of CLAES preliminary N_2O_5 data with correlative data and a model,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.9657-9677, 39 refs.

The CLAES aboard the UARS has made near-global measurements of N_2O_5. Data for 388 days have been processed to version 7 (V7) for the period from Jan. 9, 1992 to Apr. 25, 1993. Results from UARS instruments, including CLAES and the ISAMS provide the first near-global N_2O_5 measurements. Retrieval below 3.16 mbar is adversely affected by aerosols and above 1.47 mbar by lack of signal and possible instrument effects, so data usage is recommended for just the three "UARS pressure surfaces" 3.16, 2.15 and 1.47 mbar. A comparison of the diurnal data variation with the model suggests there are offsets in the data that are to first order diurnally independent. At higher altitudes and latitudes the comparison improves and tends toward consistency with systematic error estimates that are based on instrument and retrieval process characterization and range from 14% at 3.16 mbar to 21% at 1.47 mbar. A similar estimate of random CLAES error ranges from 7% at 3.16 mbar 26% at 1.47 mbar. By comparison, the average values of the error estimates generated by the production processing algorithm at 3.16 and 1.47 mbar are 8 and 36%, respectively, and the average values derived from the observed data variability are 19 and 24%. Confidence is enhanced by the good global scale agreement and correlation of CLAES and ISAMS during an N_2O_5 enhancement event in early mid-Jan. 1992 polar winter. (Auth. mod.)

K-56152
Roche, A.E., et al, **Validation of CH_4 and N_2O measurements by the cryogenic limb array etalon spectrometer instrument on the Upper Atmosphere Research Satellite,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.9679-9710, 44 refs.

CH_4 and N_2O are useful as dynamical tracers of stratospheric air transport because of their long photochemical lifetimes over a wide range of altitudes. The CLAES instrument on the UARS provided simultaneous global measurements of the altitude profiles of CH_4 and N_2O mixing ratios in the stratosphere between Oct. 1, 1991 and May 5, 1993. Data between Jan. 9, 1992 and May 5, 1993 (388 days), have been processed using version 7 data processing software, and this paper is concerned with the assessment of the quality of this data set. Each latitude was sampled 30 times per day between latitudes 34°S and 80°N, or 34°N and 80°S depending on the yaw direction of the UARS, and nearly all local times were sampled in about 36 days. This data set extends the altitude, latitude, and seasonal coverage of previous experiments, particularly in relation to measurements at high winter latitudes. Overall, the results of this validation exercise indicate that the version 7 CH_4 and N_2O data sets can be used with good confidence for quantitative and qualitative studies of stratospheric and lower-mesospheric atmospheric structure and dynamics. Nightingale, R.W., et al, **Global CF_2Cl_2 measurements by UARS cryogenic limb array etalon spectrometer: validation by correlative data and a model,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.9711-9736, 61 refs.

The cryogenic limb array etalon spectrometer (CLAES) onboard the Upper Atmosphere Research Satellite (UARS) has obtained the first global measurements of CF_2Cl_2 over six seasons, for which 388 days have been processed in data version 7 for the period from Jan. 9, 1992, to May 5, 1993. The CLAES measurements provide a near-global view of this stratospheric species, greatly extending the altitude, latitude, and seasonal coverage of previous measurements. This work evaluates CLAES version 7 data set quality. Overall, the results of this validation exercise indicate that the CLAES version 7 CF_2Cl_2 data set, within the limitations discussed in the paper, can be used for quantitative and qualitative studies of stratospheric structure and dynamics. Several figures and plates depict the CF_2Cl_2 mixing ratios as they pertain to the north and south polar regions. (Auth. mod.)

Connor, B.J., et al, **Ozone in the middle atmosphere as measured by the improved stratospheric and mesospheric sounder,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.9831-9841, 20 refs.

The improved stratospheric and mesospheric sounder (ISAMS) made ozone measurements in the stratosphere and mesosphere, with dense coverage over a broad range of latitudes extending from 80°N to 80°S, on about 180 days between Sep. 1991 and July 1992. Used in this paper is version 10 of the ISAMS data which is recommended for use in the pressure range 10-0.1 mbar at night and 10-1 mbar during daytime. Measurements and the retrieval algorithm are described, an error analysis is presented, and comparisons of the results to both climatological and coincident data are provided. It is demonstrated that biases with respect to other well-validated sets are less than 10%, which is well within the internal assessment of systematic errors.

Remedios, J.J., et al, **Measurements of methane and nitrous oxide distributions by the improved stratospheric and mesospheric sounder: retrieval and validation,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.9843-9871, 45 refs.

This paper describes the measurement technique, the current retrieval scheme (version 10), and the data set produced. The version 10 data set comprises typically 2600 profiles/d on 180 days between Sep. 26, 1991, and July 29, 1992. Retrieved profiles extend in altitude from 7 mbar to 0.08 mbar for methane and from 7 mbar to 0.8 mbar for nitrous oxide. The precision of the data is better than 20% over much of the range and estimated systematic uncertainties are less than 30%. Comparisons with coincident measurements show that the systematic uncertainties are a reasonable estimate for the methane data but reveal a much larger positive bias for the nitrous oxide data relative to other measurements. Accounting for aerosol contamination effects and a priori biases, ISAMS methane data are recommended for use in scientific studies at altitudes between 7 mbar (5 mbar in the tropics) and 0.1 mbar. ISAMS nitrous oxide data are recommended for use between 7 mbar and 1.0 mbar where relative rather than absolute values are required. Graph presentations extend the latitudinal data coverage from 80°S to 80°N. (Auth. mod.)

Fishbein, E.F., et al, **Validation of UARS microwave limb sounder temperature and pressure measurements,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.9983-10,016, 43 refs.

Temperatures and tangent-point pressure are retrieved from a 15-channel 63-GHz radiometer measuring O_2 microwave emissions from the stratosphere and mesosphere. The Version 3 data (first public release) contains scientifically useful temperatures from 22 to 0.46 hPa. Accuracy estimates are based on instrument performance, spectroscopic uncertainty and retrieval numerics. Temperature accuracy is limited mainly by uncertainty in instrument characterization, and tangent-point pressure accuracy is limited mainly by the accuracy of spectroscopic parameters. Precisions are around 1 K and 100 m. Comparisons are presented among temperatures from MLS and several stations in the US and France. Problems with Version 3 MLS temperatures and tangent-point pressures are identified, but the high precision of MLS radiances will allow improvements with better algorithms planned for the future. Several of the plates present data measured at arctic and antarctic latitudes. (Auth. mod.)

Froidevaux, L., et al, **Validation of UARS microwave limb sounder ozone measurements,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,017-10,060, 39 refs.

The MLS ozone retrievals are obtained from the calibrated microwave radiances (emission spectra) in two separate bands, at frequencies near 205 and 183 GHz. Analyses focus on the MLS Version 3 data. Described are results of simulations performed to assess the quality of the retrieval algorithms, in terms of both mixing ratio and radiance closure. From actual MLS observations, the 205-GHz ozone retrievals give better closure (smaller radiance residuals) than that from the 183-GHz measurements and should be considered more accurate from the calibration aspects. However, the 183-GHz data are less noise limited in the mesosphere and can provide the most useful scientific results in that region. The retrieved 205-GHz ozone profiles in the middle-to lower stratosphere are compared to ozonesonde measurements at a wide range of latitudes and seasons; various plates include data for arctic and antarctic latitudes. Ground-based lidar data from Table Mountain, CA, provide a good reference for comparisons at higher altitudes. Based on these analyses and other factors, MLS results appear to be generally of high quality, with some biases worth mentioning. Results for the lowermost stratosphere are still in need of improvement. A set of estimated precision and accuracy values is derived for the MLS ozone data sets. (Auth. mod.)

Waters, J.W., et al, **Validation of UARS Microwave Limb Sounder ClO measurements,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,091-10,127, 101 refs.

Credibility of the measurements is establised by (1) the consistency of the measured ClO spectral emission line with the retrieved ClO profiles and (2) comparisons of ClO from MLS with that from correlative measurements by balloon-based, ground-based, and aircraft-based instruments. Values of "noise" (random), "scaling" (multiplicative), and "bias" (additive) uncertainties are determined for the Version 3 data, the first version publicly released, and known artifacts in these data are identified. Comparisons with correlative measurements indicate agreement to within the combined uncertainties expected for MLS and the other measurements being compared. It is concluded that MLS Version 3 ClO data, with proper consideration of the uncertainties and "quality" parameters produced with these data, can be used for scientific analyses at retrieval surfaces between 46 and 1 hPa (approximately 20-50 km in height). Future work is planned to correct known problems in the data and improve their quality. Various plates and figures contain data for arctic and antarctic latitudes and diagrams of ClO profiles over McMurdo Station and Thule, Greenland are included. (Auth. mod.)

Lahoz, W.A., et al, **Validation of UARS microwave limb sounder 183 Ghz H_2O measurements,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,129-10,149, 30 refs.

Measurements of thermal emission are used to infer the concentration of water vapor over a pressure range of 46-0.2 hPa (≈20 to ≈60 km). It is estimated that version 3 MLS H_2O retrievals are accurate to within 20-25% in the lower stratosphere and to within 8-13% in the upper stratosphere and lower mesosphere. The precision of a single profile is estimated to be ≈0.15 ppmv in the mid-stratosphere and 0.2 ppmv in the lower and upper stratosphere. In the lower mesosphere the estimate of a single profile precision is 0.25-0.45 ppmv. During polar winter conditions, H_2O retrievals at 46 hPa can have a substantial contribution from climatology. The vertical resolution of MLS H_2O retrievals is ≈5 km. Specified figures show data at 60°-80°N and S. (Auth. mod.)

Russell, J.R., III, et al, **Validation of hydrogen fluoride measurements made by the Halogen Occultation Experiment from the UARS platform,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,163-10,174, 31 refs.

This paper describes the characteristics of and data from the Halogen Occultation Experiment (HALOE) HF channel, including steps taken to validate the results. The on-orbit precision of the HF measurements is shown to be better than 0.04 ppbv to 0.06 ppbv throughout the stratosphere. The estimated accuracy is 14% to 27% depending on altitude. The internal consistency of the HF measurements is excellent as judged by sunrise/sunset differences and comparison with HALOE CH_4 distributions. The mean difference between HALOE HF and correlative balloon underflight measurements is <7% from mbar to 50 mbar. Analysis of HALOE HF pressure versus longitude cross sections shows that obtaining close space and time coincidence can be very important in comparing tracer distributions. Typical characteristics of a pressure versus latitude cross section and polar orthographic projection are also discussed. Comparisons with latitudinal distributions of tracer measurements from previous experiments show similar features like the tropical double minimum due to the semiannual oscillation. All comparisons and analyses conducted provide good confidence in the validity of the HALOE HF results. Tables, plates, and figures show data for arctic and antarctic latitudes. (Auth. mod.)

Park, J.H., **Validation of Halogen Occultation Experiment CH_4 measurements from the UARS,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,183-10,203, 22 refs.

CH_4 mixing ratio is obtained using the gas filter correlation technique operating in the 3.3 μm region. Since measurements are made during solar occultation in the 57° inclination orbit, data are collected 15 times daily for both sunrises and sunsets. This provides coverage of one hemisphere in a month period. One complete hemispheric sweep from equator to ≈80° latitude is made during the spring and summer seasons of two hemispheres, and partial sweep from equator to around 50° latitude is made during the fall and winter seasons of two hemispheres. HALOE CH_4 measurements are validated using direct comparisons with correlative data and internal consistency checks using other HALOE-measured tracers, HF, and aerosols. It is estimated fro the 0.3- to 50-mbar region that the total error, including systematic and random components, is less than 15% and that the precision is better than 7%. Simultaneous mesurements of CH_4 and other HALOE species and aerosol extinction coefficients provide important information on atmospheric dynamic and chemical processes, since CH_4 can be used as a tracer and an indicator of atmospheric transport processes. Several new pieces of information on previously unreported HALOE-observed features are also presented. Figures and plates show the range of latitude for data extending into the polar regions of both hemispheres. (Auth. mod.)

Harries, J.E., et al, **Validation of measurements of water vapor from the Halogen Occultation Experiment (HALOE),** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,205-10,216, 24 refs.

Measurements are made of the transmittance of the atmosphere in a number of spectral channels as the Sun rises or sets behind the limb of the atmosphere. One of the channels, at 6.60 μm, is a broadband filter channel tuned to detect absorption in the ν_2 band of water vapor. This paper describes efforts to validate the absolute and relative uncertainties (accuracy and precision) of the measurements from this channel. The HALOE data have been compared with independent measurements, using a variety of observational techniques, from balloons, from the ground, and from other space missions, and with the results of a two-dimensional model. The results show that HALOE is providing global measurements throughout the stratosphere and mesosphere with an accuracy within ±10% over most of this height range, and to within ±30% at the boundaries, and to a precision in the lower stratosphere of a few percent. The observed systematic behavior and internal consistency of the HALOE data, coupled with these estimates of their accuracy, indicate that the data may be used for quantitative tests of the understanding of the physical and chemical processes which control the concentration of H_2O in the middle atmosphere. Textual references, figures, and plates show measured data in both northern and southern polar regions. (Auth. mod.)

Brühl, C., et al, **Halogen Occultation Experiment ozone channel validation,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,217-10,240, 32 refs.

The HALOE instrument on UARS observes vertical profiles of ozone and other gases of interest for atmospheric chemistry using the solar occultation technique. A broadband radiometer in the 9.6 μm band is used for ozone measurements. Version 17 ozone retrieved by HALOE is intercompared successfully with about 400 profiles of other sounders, including ozonesondes, lidars, balloons, rocketsondes, and other satellites. Usually, the HALOE data are within the error range of the correlative measurements between about 100 and 0.03 mbar atmospheric pressure. Between about 30 and 1 mbar, HALOE agrees typically within 5%, with a tendency to be low. In the first year of data, larger errors sometimes occur in the lower stratosphere due to the necessary correction for Pinatubo aerosol effects, but these differences do not exceed 20%. The data show internal consistency for sunrise and sunset events at the same locations. Some examples of observed ozone distributions, including both polar regions, are given. (Auth. mod.)

Manney, G.L., et al, **Comparison of U.K. Meteorological Office and U.S. National Meteorological Center stratospheric analyses during northern and southern winter,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,311-10,334, 27 refs.

Both UKMO and NMC analyses capture the large-scale evolution of the stratospheric circulation during Northern Hemisphere (NH) and Southern Hemisphere (SH) winters. Stronger vertical and horizontal temperature gradients develop in the UKMO than in the NMC data during stratospheric warmings; comparison with satellite measurements with better vertical resolution suggests that the stronger vertical temperature gradients are more realistic. The NH polar vortex is slightly stronger in the UKMO analyses than in the NMC in the middle and upper stratosphere, and midstratospheric temperatures are slightly lower. The SH polar vortex as represented in the UKMO analyses is stronger and colder in the midstratosphere than its representation in the NMC analyses. The UKMO analyses on occasion exhibit some difficulties in representing cross-polar flow or changes in curvature of the wind field at very high latitudes. In addition to the above study of two wintertime periods, a more detailed comparison of lower-stratospheric temperatures is done for all arctic and antarctic winter periods since the launch of the UARS. Cunnold, D.M., Froidevaux, L., Russell, J.M., Connor, B.J., Roche, A., **Overview of UARS ozone validation based primarily on intercomparisons among UARS and Stratospheric Aerosol and Gas Experiment II measurements,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,335-10,350, 16 refs.

Comparisons of data were made from the measurements by UARS instruments, i.e., MLS, CLAES, ISAMS, and HALOE, against those measured by SAGE II. No consistent patterns were noted in which the UARS data were similar to those of SAGE II or differed to the same degree in similar locations during the same seasons. Rather, seasonal and latitudinal differences in varying amounts seemed to be the norms. Data from both polar regions are reported. (Auth. mod.)

McLandress, C., Shepherd, G.G., Solheim, B.H., Burrage, M.D., Hays, P.B., Skinner, W.R., **Combined mesosphere/thermosphere winds using WINDII and HRDI data from the Upper Atmosphere Research Satellite,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,441-10,453, 20 refs.

The data analyzed cover from Feb. 1992 to Feb. 1994 and consist of both day and nighttime WINDII winds obtained from the $O(^1S)$ green line emission and mesosphere/lower thermosphere daytime HRDI winds from the O_3 atmospheric band. The combination of the WINDII and HRDI data sets is first justified by comparing all the data in the lower-thermosphere overlap region for days and orbits when both instruments were observing the same volume of atmosphere. This comparison shows good agreement between the two instruments. An analysis of the combined WINDII and HRDI winds during equinox and solstice periods is then performed. The amplification with height of the diurnal tide at equinox and its subseqeunt decay in the lower thermosphere are clearly demonstrated by the observations. The corresponding background (i.e., diurnal mean) zonal wind component exhibits a broad region of easterlies at lower latitudes in the upper mesosphere and lower thermosphere and westerlies at mid-latitudes. Above 120 km the mean winds revert to easterlies in the zonal component and a two-celled equator to pole meridional circulation. (Auth. mod.)

Fleming, E.L., et al, **Climatological mean wind observations from the UARS high-resolution Doppler imager and wind imaging interferometer: comparison with current reference tools,** *Journal of geophysical research,* Apr. 30, 1996, 101(D6), p.10,455-10,473, 58 refs.

The authors have used 2-3 years of UARS HRDI and WINDII observations to construct a monthly and diurnal mean zonally averaged climatology of zonal and meridional wind for the 50- to 120-km region, and to compare with the current CIRA-86 and HWM-93 reference models. Comparisons are limited to regions where the tidal oscillations can be adequately removed from the UARS observations using simple binning and averaging methods. At 50-80 km the reference models, which are based on gradient winds derived from temperatures, compare well with the HRDI data in reproducing the overall seasonal variations, including the magnitudes and positions of the winter westerly and summer easterly jets at mid-latitudes. At 95 km, HRDI and WINDII show year-round easterlies at low latitudes and indicate a strong westerly jet during summer and weaker, more variable flow during winter at mid-latitudes. The CIRA-86 gradient winds at 95 km show some qualitative agreement with the UARS data at mid-latitudes, especially in simulating the summertime jet. However, the comparison is poor at low latitudes. Although the main focus of these comparisons is on the mid-latitudes, several of the figures contain data for both polar regions. (Auth. mod.)

Storey, J.W.V., **Beyond the South Pole,** Amazing light: a volume dedicated to Charles Hard Townes on his 80th birthday, edited by R.Y. Chiao, New York, Springer-Verlag, 1996, p.613-619, 9 refs.

DLC QC685.A43 1996

In one of the 64 papers comprising this Festschrift to Charles Hard Townes, the several advantages of Antarctica, generally, and the South Pole, particularly, are recounted, with the extremely dry atmosphere being the major consideration. Other antarctic sites are noted: Vostok, and Domes A and C, all of which are at higher elevations than Amundsen-Scott, which has the singular advantage of being the most logistically accessible. Several of the programs and projects for antarctic astronomical research are noted: Automated Geophysical Observatory, adapted for astronomical research; Automated Astronomical Site-Testing Observatory (AASTO); near infrared sky monitor; mid-infrared transmission and sky brightness monitor; the UV/visible sky monitor. Plans are being developed for an AASTO set-up at Amundsen-Scott Station and eventually to be established at Dome C, probably the best but least accessible submillimeter site on earth.

Vitt, F.M., Jackman, C.H., **Atmospheric ionization by solar particles detected by nitrate measurements in antarctic snow. FY91 AASERT,** *U.S. Air Force Office of Scientific Research. Technical report,* Nov. 1995, AFOSR-TR-96-0223, 37p., ADA-308 179, Refs. p.18-22.

The odd nitrogen source strengths associated with solar proton events (SPEs), galactic cosmic rays (GCRs), and the oxidation of nitrous oxide in the Earth's middle atmosphere from 1974 through 1993 have been compared globally, at middle and lower latitudes (<50°), and polar regions (>50°) with a two-dimensional (2-D) photochemical transport model. As discovered previously, the oxidation of nitrous oxide dominates the global odd nitrogen source while GCRs and SPEs are significant at polar latitudes. The horizontal transport of odd nitrogen, produced by the oxidation of nitrous oxide at latitudes <50°, was found to be the dominant source of odd nitrogen in the polar regions with GCRs contributing substantially during the entire solar cycle. The source of odd nitrogen from SPEs was more sporadic; however, contributions during several years (mostly near solar maximum) were significant in the polar middle atmosphere. (Auth.)

Kanao, M., Kaminuma, K., **Detection capability of earthquakes recorded at Syowa Station, Antarctica, from 1987 to 1993,** *Antarctic record,* July 1995, 39(2), p.156-169, With Japanese summary. 20 refs.

Phase readings of teleseismic earthquakes at Showa Station have been carried out since 1967 by use of analog records of three-component short- and long-period seismometers. Seismic observations and phase readings have been conducted by the wintering members of the Japanese Antarctic Research Expedition (JARE). The arrival times of *P*-waves were reported to the United States Geological Survey (USGS) and the International Seismological Center (ISC), then published as the "JARE Data Reports (Seismology)" by the National Institute of Polar Research (NIPR). In recent years, the quality of chart records has improved by the advance of electronics. In this paper, the hypocentral distribution of the detected earthquakes for the period from 1987 to 1993 is presented, and the spatial distribution and time variations for epicentral parameters are investigated. The detection capability of earthquakes is discussed in relation to the report from ISC data. (Auth.)

Dibble, R.R., Kyle, P.R., Skov, M.J., **Volcanic activity and seismicity of Mount Erebus, 1986-1994,** *Antarctic journal of the United States,* 1994, 29(5), p.11-14, 4 refs.

Mount Erebus, a 3,794-m high active volcano on Ross I., has a permanent lake of molten anorthoclase phonolite magma in its inner crater. A 3-month period of sustained large strombolian eruptions starting in Sep. 1984 buried the lake and ejected over 100,000 cu m of phonolite bombs and other ejecta. Since 1985, when the lava lake was exhumed, small strombolian eruptions have occurred at rates of between 0 and at least 8 per day. Between Dec. 1986 and Dec. 1990, Victoria University of Wellington maintained surveillance of the lava lake (when cloud and solar battery power allowed) from a videocamera situated on the north rim of the main crater. The video signal was radioed to Scott Base using a television transmitter where it was recorded on videotape. Brief descriptions of the volcanic activity, and changes in the lava lake recorded using the video monitoring system and ground-based surveillance made during austral summer field seasons, are presented.

Cooper, A.K., Cochrane, G., Zhang, J., Brancolini, G., Pellis, G., Egloff, F., **Antarctic crustal profile seismic project, Ross Sea, Antarctica,** *Antarctic journal of the United States,* 1994, 29(5), p.15-18, 9 refs.

The antarctic crustal profile (ACRUP) project is a multinational seismic experiment that was conducted in the Ross Sea area during the 1993-94 austral summer under the auspices of the Italian National Research Antarctic Program (PNRA). Scientists from 5 research institutes in Italy, 2 in Germany, and 2 in the United States participated in the experiment. This article provides a brief overview of the project and some preliminary results. The objective of the ACRUP project was to record large-offset seismic and other geophysical data along a 400 km transect across the tectonic boundary between East and West Antarctica to study the deep crustal structure of the Transantarctic Mountains and adjacent Victoria Land basin in the western Ross Sea.

Kanao, M., Akamatsu, J., **Shear wave *Q* structure for the lithosphere in the Lützow-Holm Bay region, East Antarctica,** NIPR Symposium on Antarctic Geosciences, Proceedings, Tokyo, National Institute of Polar Research, Oct. 1995, p.1-14, 26 refs.

Seismic wave attenuation in the lithosphere has been studied in various regions by the analysis of coda amplitudes of *S*-waves for local earthquakes. On the basis of the observed facts, the attenuation factor of coda waves (Q_c) is assumed to reflect the averaged Q for *S*-waves (Q_s) in an area within the ellipsoid of the scattering medium in the lithosphere. In this study, layered models of Q_s for the lithosphere in 2 tectonically different regions of shield and island arc were estimated from the observed Q_c at the various lapse times defined as 'time origin of earthquake'. For the representative of stable shield regions, 5 shallow earthquakes observed with a local telemetry seismic network around the Lützow-Holm Bay region were re-analyzed to calculate Q_c for the lapse time ranging from 20s to 70s in the 4, 8 and 16 Hz frequency bands. L-54614

Akamatsu, J., Kaku, H., Kanao, M., **Coda *Q* of local earthquakes observed on the southeast Tibetan Plateau: comparison with Lützow-Holm Bay region, East Antarctica,** NIPR Symposium on Antarctic Geosciences, Proceedings, Tokyo, National Institute of Polar Research, Oct. 1995, p.15-24, 16 refs.

Coda Q of local earthquakes observed at Bomi, southeast Tibetan Plateau was evaluated using a single scattering model and compared with that in the Lützow-Holm Bay region. The results are: Q^{-1} for short lapse time (SLT) from 5 to 50s shows large dependence on frequency; Q^{-1} for SLT in the Tibetan plateau region is larger than that in the Lützow-Holm Bay region; Q^{-1} for long lapse time from 80 to 160s in the Tibetan region is nearly the same as that in Lützow-Holm Bay. Although there is a need for discussion of coda excitation modeling, all these features are consistent with the general relation between coda Q and regional tectonic activities. (Auth.)

Kubo, A., Hiramatsu, Y., Kanao, M., Ando, M., Terashima, T., **Analysis of the SKS splitting at Syowa Station in Antarctica,** NIPR Symposium on Antarctic Geosciences, Proceedings, Tokyo, National Institute of Polar Research, Oct. 1995, p.25-34, 26 refs.

To reveal the seismic anisotropy of the crust and mantle beneath East Antarctica, the authors conducted a shear wave splitting analysis of SKS waves using STS seismograms at Showa Station. The average direction of the fast shear wave was N49°E and the delay time was 0.7s, which was larger than the crustal values in other regions. On the origin of anisotropy in relation to large delay time, 3 possible mantle flows are considered: present asthenospheric flow due to the plate motion; paleo mantle flow related to Gondwana breakup; and paleo mantle flow that has formed progressive metamorphism and foldings of the Lützow-Holm Complex in the Late Proterozoic. Neither the direction of present absolute plate motion (N120°E) nor the direction of first breakup of Gondwana at Showa Station (NW-SE) coincides with the observed direction of anisotropy. From metamorphic studies, the compressional event related to progressive metamorphism has been recognized. The peak metamorphism has been observed along the thermal axis trending NW-SE. Other geologic fabrics around Showa Station also show that this area has undergone NE-SW compression. (Auth. mod.)

L-54616

Kaminuma, K., **Seismicity around the Antarctic Peninsula,** NIPR Symposium on Antarctic Geosciences, Proceedings, Tokyo, National Institute of Polar Research, Oct. 1995, p.35-42, 15 refs.

Seismic activity in the vicinity of the South Shetland Is. is very high compared with other regions of the Antarctic. A study of International Seismological Center data between 45-70°W and 55-72°S, covering the 1979-1990 time period, verifies this conclusion. Earthquakes have been located along the South Scotia Ridge, the Shackleton Fracture Zone, the Hero Fracture Zone and the South Shetland Is. The earthquakes in the South Shetlands are concentrated on Deception and Bridgeman islands, both volcanic islands on either side of the Bransfield Rift. No seismic evidence is recognized along the Bransfield Rift, and very little along the South Shetland Trench. It can be concluded that neither subduction nor rifting is active in this region at present. (Auth.)

Miller, H., ed, Grobe, H., ed, **Expedition ANTARKTIS-XI/3 of *Polarstern* in 1994** [Die Expedition ANTARKTIS-XI/3 mit FS *Polarstern* 1994], *Berichte zur Polarforschung,* 1996, No.188, 115p., In German (some segments in English) with English summary.

The main objective of this leg was marine geophysical research to study the crustal structure at the western margin of the antarctic continent. This was achieved by combined land-sea deep seismic sounding experiments using recording instruments on the inland ice as well as ocean bottom seismographs. At the same time multichannel seismic reflection lines were observed over the shelf and the adjacent deep sea areas in order to resolve the sedimentary cover and to gain an understanding of the depositional history, especially during the Cenozoic. While the deep seismic sounding experiments were part of the ANTALITH Project, the studies of the sedimentary cover also increased the understanding of the history of antarctic glaciation, since the major advance and retreat stages are documented in the sediments. Vigliotti, L., **Paleomagnetic investigations in Victoria Land,** Italian Antarctic Research Programme. Earth Sciences. X ItaliAntartide Expedition, 1994-95: field data reports, Siena, Sep. 1995, p.16.

This paleomagnetic research in Antarctica is focused on the project "Paleomagnetic study of Victoria Land in the framework of the Gondwana Supercontinent" with the aim to investigate apparent polar wander path (APWP) of the Antarctic Plate. During the X Italian expedition, paleomagnetic sampling was carried out on Mesozoic and Tertiary rocks outcropping in northern and southern Victoria Land. Early Pleistocene volcanics were sampled at Shield Nunatak to study the behavior of the magnetic field during the transition occurring in a change of polarity. According to the radiometric age (1.61-1.74 Ma), the mugearitic lava flows of Shield Nunatak should be emplaced close to the transition between the Olduvai and the Matuyama chrons (1.75 Ma).

Caneva, G., Gambetta, M., **Magnetovariational stations in the Lanterman Range and Sheehan Mesa: an extension of the GDS network in northern Victoria Land,** Italian Antarctic Research Programme. Earth Sciences. X ItaliAntartide Expedition, 1994-95: field data reports, Siena, Sep. 1995, p.22-23, 3 refs.

The magnetovariational temporary stations installed during the 1986-1989 Italian antarctic expeditions established the first "nonsimultaneous array" in Victoria Land. The magnetovariational data were processed using a GDS (Geomagnetic Deep Sounding) approach to obtain information on electrical conductivity of litho-asthenospheric structures in this area. During the 1994-95 campaign, two new three-component fluxgate magnetometers (EDA 100B) were installed in order to extend the investigated area and to obtain new data to check the applicability range of the adopted techniques.

Romeo, G., Cerrone, M., Chiappini, M., Morelli, A., **Seismic observatory in Terra Nova,** Italian Antarctic Research Programme. Earth Sciences. X ItaliAntartide Expedition, 1994-95: field data reports, Siena, Sep. 1995, p.60-62, 3 refs.

Installed in 1989, the very-broadband (VBB) seismographic station in Terra Nova Bay is a remotely-controlled, unmanned automatic station which provides continuous and triggered recording of very broadband and short period data. The station produces data useful for global studies (VBB data) and local seismology (short period data). The technical problems which were solved and the current configuration of the station are described. The importance of the Terra Nova Station derives from its unique location and its advanced instrument characteristics. The station is part of the primary network of the Federation of Digital Seismograph Stations (FDSN). Data are collected and shared with other institutions in the FDSN.

Russi, M., Marino, B., **Broad band seismology in the Scotia Arc: the Esperanza and the Ushuaia seismographic stations,** Italian Antarctic Research Programme. Earth Sciences. X ItaliAntartide Expedition, 1994-95: field data reports, Siena, Sep. 1995, p.63-64.

The development of the Italian project for the establishment and subsequent exploitation of a Scotia Region broadband seismographic network began in 1992 when a three component broadband station was installed at the Esperanza Station. The station was upgraded during Jan. and Feb. 1993. The complete renewal of the Esperanza Station instrumentation and the installation of a second broadband station at Ushuaia are reported. Each station consists of a 6 channel, fully PASCAL compatible, 24 bit Reftek 72-08 digital seismograph, connected to a three component broadband CMG-3T seismometer with a flat frequency response from 0.01 to 50 Hz. The time signal is provided by a GPS receiver. Data are recorded on an external 500 Mbyte SCSI disk drive and a DAT tape recorder is used to backup the recordings on 1.3 gigabyte cassettes.

Shumilov, A.V., **Using group explosions on the surface of antarctic glaciers during deep seismic sounding research** [Opyt ispol'zovaniia gruppovykh vzryvov s poverkhnosti lednikov Antarktidy pri issledovaniiakh metodom GSZ], *Antarktika,* 1993, No.32, p.36-40, In Russian with English summary. 3 refs.

An original method for calculating group charges to induce seismic waves in loose snowy neve parts of antarctic glaciers is described. The experiments have shown that this method can provide a substantially increased intensity of useful seismic waves and determine the charge necessary for recording seismic waves at appropriate distances from the source. Following the given method, charges may be placed in shallow holes up to 15 m deep, substantially simplifying the complex technology of preparing powerful explosions on antarctic glaciers. This method can also be used in other parts of the world having unfavorable conditions for inducing seismic fluctuations due to loose sediments. (Auth.)

Kowalski, T., Górski, M., **Arctowski Antarctic Station (AAS), 1988-1991,** *Polish Academy of Sciences. Institute of Geophysics. Publications,* 1993, B-15(258), p.3-49, 3 refs.

The bulletin contains a list of local earthquakes recorded at the Arctowski Station from Jan. 1, 1988 through Dec. 31, 1991. The seismological station has been operating since Mar. 1978. At the beginning of 1988, a new instrument for the recording of local earthquakes was installed at the station. It consists of a short-period instrument RK1c, connected with an RRO1/82 LP recorder and SM3 seismometers (three components). The recording of seismic signals is made in a continuous manner on paper. The time is provided from an external clock, the rate of which is compared with signals from a time signals broadcasting station. Universal Time (UT) is used. Details of the recording process are given.

Ito, K., Kanao, M., **Detection of reflected waves from the lower crust on Mizuho Plateau, East Antarctica,** *Antarctic record,* Nov. 1995, 39(3), p.233-242, With Japanese summary. Refs. p.241-242.

A reflective lower crust has been found in some regions of Phanerozoic orogens. Seismic refraction data from explosion experiments during the 21st Japanese Antarctic Research Expedition (JARE-21) in 1981 were re-analyzed to detect reflected waves from the lower crust. An explosion in Lützow-Holm Bay with 3000 kg of explosive gave well-recorded seismic waves at 27 stations along a 300 km profile on the northern Mizuho Plateau. A band-pass filtered record section with a normal-moveout velocity of 6.3 km/s shows clear phases of large amplitudes in a range of 8-16 s of two-way travel time; these phases can be considered as wide-angle reflected waves from the lower crust. The reflection depths correspond to about 18-48 km. The depth patterns of reflective layers on the Mizuho Plateau can be related to the Bouguer gravity anomalies and are useful for studying the evolution of the Lützow-Holm Complex. (Auth.)

Kanao, M., Kaminuma, K., Shibuya, K., Nogi, Y., **Transfer, archives and public use of digital data for solid earth geophysics at Syowa Station, Antarctica by computer network,** *Antarctic record,* Nov. 1995, 39(3), p.303-320, In Japanese with English summary. 16 refs.

Data transmission of solid earth geophysics between Showa Station and the National Institute of Polar Research (NIPR) was successfully carried out by JARE-34 in 1993 via the INMARSAT satellite telecommunication system. In 1994, data transmission from the Earth Science Laboratory (ESL) was carried out by JARE-35 using UUCP (Unix-to-Unix Copy) protocol for the file transfer. E-mail services were started by JARE-36 in May 1995. In this paper, the data transmission between Showa Station and NIPR, the data archives in the UNIX workstation, and data release using the other antarctic stations are also discussed. (Auth. mod.)

Redfield, T.F., **Transantarctic Mountains of northern Victoria Land: underplating, episodic uplift, and flexural suppression,** Tempe, Arizona State University, 1994, 489p., University Microfilm order No. AAD94-28876, Ph.D. thesis. Refs. p.231-259.

Gravity and apatite fission track data from northern Victoria Land (NVL) have been applied to the study of the uplift of the Transantarctic Mountains (TAM). Gravity data show marked contrasts between NVL and southern Victoria Land (SVL). Modeling, partially constrained by seismic data in the Ross Sea, onshore seismic work in the Terra Nova Bay region, and seismic wave dispersion studies in East Antarctica, suggest that if crustal roots support the TAM, the range is not in local isostatic equilibrium. Instead, the mountains are overcompensated: unless flexurally suppressed, root structures would be expected to support significantly greater topographies. New apatite fission track (AFT) data from NVL and the NVL/SVL transition have defined the existence of six structural blocks, each with an independent history of uplift/denudation. Episodic uplift has been unequivocally detected within one vertical profile in the Admiralty Mountains (NVL). (Auth. mod.)

Kellogg, K.S., **Paleomagnetic investigation of rocks from the Ohio Range and the Dry Valleys, Transantarctic Mountains, Antarctica,** *New Zealand journal of geology and geophysics,* 1988, Vol.31, p.77-85, 32 refs.

Two well-defined virtual geomagnetic poles (VGPs) for East Antarctica were obtained from the Middle Jurassic Ferrar Dolerite, sampled from a thick sill on Mt. Schopf in the Ohio Range, and from a horizontal sheet intruding Paleozoic granitic rocks at Mt. Cerberus in the Dry Valleys. The VGP from the sill at Mt. Schopf lies at lat. 58°.0S, long. 129°.0W (dm=13°, dp=12°), and the VGP from Mt. Cerberus lies at lat. 57°.8S, long. 135°.7W (dm=6°, dp=6°). Rocks from both localities have normal polarity magnetizations. These data, together with 15 other acceptable pole positions reported in the literature, define a Middle Jurassic paleomagnetic pole at 52°.7S, 139°.6W (α_{95}=4°.4), which is not significantly different from previously reported mean Middle Jurassic paleomagnetic poles from East Antarctica. Paleomagnetic investigations in the Ohio Range of mafic inclusions in Ordovician granitic and sedimentary rocks of Devonian and Permian ages showed that the rocks are magnetically unstable and are unreliable for determining a paleomagnetic pole. Origen y evolución], Actas del tercer Symposium Español de Estudios Antárticos, Gredos, 3 al 5 de octubre de 1989. (Spanish Symposium on Antarctic Studies, 3rd, Gredos, Oct. 3-5, 1989. Proceedings). Edited by J. Castellví, Madrid, Comisión Interministerial de Ciencia y Tecnología, 1990, p.224-229, In Spanish with English summary. 16 refs.

DLC G845.S93

Analysis of frequency spectra of volcanic tremors recorded on Deception I. during the 1986-87 and 1987-88 summer expeditions suggests that their origin is associated with strong resonance phenomena. The turbulent motions induced by escaping gasses within the conduit, from shallow aquifers to the surface, agree with experimental data and is a proposed cause of volcanic tremors. More systematic information seems to be needed for a better knowledge of the source model and location, and for correlation between tremor features and volcanic activity. (Auth. mod.)

Meert, J.G., Van der Voo, R., **Paleomagnetic and ^{40}Ar/^{39}Ar study of the Sinyai Dolerite, Kenya: implications for Gondwana assembly,** *Journal of geology,* Mar. 1996, 104(2), p.131-142, 39 refs.

New paleomagnetic and ^{40}Ar/^{39}Ar age data from the Sinyai metadolerite dike in central Kenya support the suggestion that the eastern portion of Gondwana was assembled during two separate orogenic events. The dike intrudes Mozambique Belt metasediments dated ca. 700 Ma and was itself metamorphosed to greenschist facies at 547 Ma. This greenschist-facies event reset the original magnetization in the rocks and occurred over a time span that included at least one field reversal. The paleomagnetic pole at 20°S, 319°E augments the available paleomagnetic database for Gondwana and suggests that Gondwana assembly was completed by 550 Ma; therefore the concept of a united East Gondwana continent may not be valid for pre-550 Ma time. In this model, the 650-800 Ma East Africa Orogeny resulted from a collision between the Congo craton of East Africa and the IMSLEK terranes (India, Madagascar, Sri Lanka, Enderby Land, and the Kalahari craton.) A pervasive granulate-facies metamorphic event at ca. 550 Ma in parts of East Gondwana, coupled with paleomagnetic evidence for a united Gondwana at 550 Ma, led to the suggestion of a Kuunga Orogeny at this time, resulting from the collision of Australo-Antarctica with Congo-IMSLEK. DLC G845.5.C45 1989 Orien China

In an attempt to determine the source of the geoid depression in Antarctica, the thickness of the crust was calculated by gravity inversion methods and standard seismic sounding data. On this basis, the authors computed the geoidal undulation caused by the interior mass anomalies of the lithosphere. Compared with the geoidal undulation calculated from satellite gravitational data, it is suggested that the interior mass anomalies of the lithosphere dominated the geoidal undulation until the antarctic glacier reached its greatest height, during the Miocene-Lower Pliocene. After this the undulation greatly decreased, leading to the geoid depression in Antarctica. It is concluded that the actual ellipsoid flattening of the earth is greater than that of the hydrostatic equilibrium ellipsoid. (Auth. mod.)

Shu, P.Y., Hu, J.F., Teng, J.W., Zhang, Z.J., Jiao, C.M., **Group velocity of seismic Love surface wave and lithosphere structure in Antarctic Peninsula,** *Antarctic research (Chinese edition),* June 1996, 8(2), p.42-45, In Chinese with English summary. 8 refs.

This paper is based on the surface wave seismograms of the South Sandwich Is. earthquake (Ms=6.4) recorded at the Bernardo O'Higgins Station. The authors computed a group velocity dispersion of Love surface waves and obtained the lithospheric structure by applying the matched-filter frequency-time analysis and the grid dispersion inversion. Results shows that the crustal structure below the Antarctic Peninsula may be divided into three layers, and that their thicknesses are respectively 5, 8 and 10 km. The upper mantle velocity is 5.32 km/s, gradually changing into 5.11 km/s-4.9 km/s below 53 km. The minimum velocity is 4.8 km/s. It is inferred that the antarctic mantle is also a layered structure. (Auth.)

Jiao, C.M., Kong, X.R., Liu, C.S., **Geomagnetic survey on frozen sea near Zhongshan Station, Prydz Bay, Antarctica,** *Antarctic research (Chinese edition),* June 1996, 8(2), p.52-58, In Chinese with English summary. 11 refs.

As a preparation for future inland investigation in Antarctica, a geomagnetic survey was conducted during the 9th Chinese Antarctic Research Expedition of 1992-1993. The survey area, covering about 132 km^2, is located north of Zhongshan Station in Prydz Bay. The results show that there is a NW direction anomaly with 5-8 km width and 500 nT in amplitude. The anomaly is probably caused by a plutonic mass or a magnetite-rich body, located at a depth of 0.3-2.0 km below sea level. It has been shown that a large-range geophysical survey of Prydz Bay is fully feasible during the antarctic winter. (Auth.)

Zhang, C.J., Jiang, F.Z., Fang, J., Lu, Y., **Calculation of the Moho-discontinuity and discussion of feature of gravity field in the antarctic region,** *Antarctic research (Chinese edition),* June 1996, 8(2), p.59-64, In Chinese with English summary. 3 refs.

The Bouguer gravity anomaly and free-gravity anomaly in Antarctica were calculated using the OSU91A potential model. An analysis was made of the cautions of the acute change of the free-air anomaly and the correlation between the free-air anomaly and height. Also calculated were the ice and crustal thicknesses using free-air anomaly data by means of the multi-layer inversion method. Results show that the thickest ice areas are found in East Antarctica. The pronounced undulation of crustal thickness also concentrates in East Antarctica, the thickest being 56 km. The crustal thickness in West Antarctica is only some 8 km. (Auth. mod.)

Kuo, B.Y., Chenn, C.H., Zhang, Y.S., **Fast velocity anomaly to the west of the Australian-Antarctic Discordance,** *Geophysical research letters,* Aug. 15, 1996, 23(17), p.2239-2242, 13 refs.

To examine the hypothesis that the Australian-Antarctic Discordance overlays an anomalously cold upper mantle, the authors have measured Rayleigh wave group velocities along paths between the Southeast Indian Ridge and the Australian station NWAO. The group velocity peaks for events in the vicinity of 117°E, rather than for those within the discordance zone between 120 and 127°E. This variation is resolved at least for periods of 35-45 s. To model the cause, assumed velocity anomalies with simple geometry were tested using the surface wave Gaussian beam method in a forward sense. The preferred model consists of an elongated structure centered 300-500 km west of the discordance and stretching northward for at least 1000 km. The position of the anomalous structure is consistent with recent global tomographic models in this region. (Auth. mod.)

Beck, F., Schott, J.J., Westphal, M., **Construction of a synthetic Australian and Antarctic Apparent Polar Wander Path (APWP) since 250 Ma** [Construction d'une courbe de dérive apparente du pôle (CDAP) synthétique pour l'Australia et l'Antarctique depuis 250 Ma], *Académie des sciences, Paris. Comptes rendus. Série II,* July 1996, 323(1), p.25-31, In French with English summary. 11 refs.

Australian and antarctic palaeomagnetic databases suffer from a lack of data for several periods of time. These two databases are combined in order to establish a synthetic Antarctic Apparent Polar Wander Path (APWP) for Australia and Antarctica since 250 Ma. The synthetic curve obtained in these two reference frames is compared to those established using Australian and antarctic data alone respectively. This synthetic path shows two important changes of direction: a first one around 160-180 Ma which corresponds to the initial rifting between Australia and Antarctica, a second one around 40 Ma which corresponds to the acceleration of the motion between both plates. These changes of direction are also the result of large-scale global reorganization of plate motion. (Auth. mod.)

Russi, M., Costa, G., Febrer, J., **Broad band seismology in the Scotia region. The base Esperanza seismological observatory,** *International Centre for Theoretical Physics. Report,* Aug. 1995, IC-95/210, 19p., DE96-618142, 11 refs.

The lithospheric study and the identification of relevant lateral heterogeneities in the antarctic continent and borderlands is essential to understand the geodynamic evolution both of the continental and oceanic bordering regions. The complexity of the geological evolution and the structural properties of the lithosphere in the Scotia area have been stressed. The present setting of the area is the result of the mutual interaction among the antarctic, South American and several minor plates whose geodynamic history and actual boundaries are still partially unknown. The intense seismic activity that characterizes the region encourages the use of the seismological approach to investigate the lithospheric structure of the area. A broad band three components station is operating at the antarctic base Esperanza in the NE area, of the Antarctic Peninsula. The extension of the authors' analysis to further events and to horizontal component records is presented. (Auth.)

M-54318

Dodds, K.J., **South Africa and the Antarctic, 1920-1960,** *Polar record,* Jan. 1996, 32(180), p.25-42, Refs. and notes p.39-42.

The South African state has never made a formal claim to the antarctic continent. In the inter-war period, the South African government prepared a number of memoranda and discussion papers on the subject of a 'South African sector in the Antarctic.' The present paper not only critically interprets those government papers but, more importantly, assesses the reasons why South Africa never made a formal claim. It is suggested that relations with Britain and the Empire, as well as the activities of Norway and the United States, were crucial determining factors. Finally, the implications for late South African involvement in the South Atlantic and the Antarctic Treaty System are briefly considered. (Auth.)

Kriwoken, L., Keage, P., **Antarctic Treaty System,** *Canberra. Australian National University. CRES. Resource and Environmental Studies,* 1989, No.1, Antarctica: policies and policy development. Edited by J. Handmer, p.1-6, 9 refs.

The Antarctic Treaty System comprises four interacting elements: the Antarctic Treaty and the recommendations of 13 biennial Consultative Meetings and several Special Meetings; the Convention for the Conservation of Antarctic Seals (1972); the Convention for the Conservation of Antarctic Marine Living Resources (CCAMLR) (1980); and liaison with outside bodies, especially the Scientific Committee for Antarctic Research (SCAR). The geographic jurisdiction and the significance for nature protection of these elements are summarized.

M-54324

Hearder, J., **Australian government perspective,** *Canberra. Australian National University. CRES. Resource and Environmental Studies,* 1989, No.1, Antarctica: policies and policy development. Edited by J. Handmer, p.7-12, 1 ref.

Australia's main priorities regarding the future of Antarctica are to maintain strategic and political security; protect the environment; continue access for scientific and possible economic activities; and to maintain its sovereignty and influence. The chief means of achieving these priorities are considered to be through Australian antarctic bases and by continuing to be active in the Treaty System, antarctic organizations, communities and other concerned bodies. The Australian government is generally opposed to the idea of Antarctica being granted 'world park' status, as future scientific research, fishing, tourism and mining would not necessarily be accommodated. (Auth. mod.)

Herr, R., Hall, R., **Science as currency and the currency of science,** *Canberra. Australian National University. CRES. Resource and Environmental Studies,* 1989, No.1, Antarctica: policies and policy development. Edited by J. Handmer, p.13-24, 21 refs.

Science has emerged as the basic international currency for practical influence in antarctic affairs. In recent years, Australia may not have maximized its use of this currency. In part, this is because the instrumental aspects of antarctic science have not been adequately acknowledged in some policy-making circles. Concern over Australia's effective pursuit of influence through the instrumental use of science arises from the nature of the current rebuilding program at Australia's antarctic bases, the manner in which Australian Antarctic Expeditions (ANARE) appear to be assembled, and transport arrangements. It is suggested that Australia should pursue quality research and keep firmly in mind the instrumental value of this research. It is argued that because there are grounds for believing that the role of science as the medium of exchange in Antarctica is on the downward slope of devaluation, Australian policy makers must monitor the fluctuating value of science in the market of antarctic politics. (Auth. mod.)

M-54326

Graham, A., **Environmentalist's perspective on the future of Antarctica,** *Canberra. Australian National University. CRES. Resource and Environmental Studies,* 1989, No.1, Antarctica: policies and policy development. Edited by J. Handmer, p.25-29.

It is argued that Antarctica should not become a 'museum'. Rather, scientific and commercial activities should continue under careful controls so as to preserve the wilderness, the opportunities for 'unique science', and aquatic and terrestrial plant and wildlife. These conservation priorities for antarctic management are discussed against a background of uncooperative action by nations with antarctic interests, and the global phenomenon of over-exploitation of natural resources. It is also argued that mining is the greatest threat to the wilderness status of Antarctica. Patterns of human exploitation in the region have impacted significantly on plant and animal life. For example, rapid depletion of krill stocks through over-exploitation is identified as a major environmental threat. It is noted, with concern, that air pollution is reducing the claim that much of Antarctica can be regarded as 'untouched'. The ozone hole, which can only be assessed from the Antarctic, is an example of the unique science possible in the area. (Auth.)

M-54327

Kriwoken, L., Keage, P., **Antarctic environmental politics: protected areas,** *Canberra. Australian National University. CRES. Resource and Environmental Studies,* 1989, No.1, Antarctica: policies and policy development. Edited by J. Handmer, p.31-48, Refs. p.46-48.

This paper examines the protected area network established by the Antarctic Treaty System (ATS), that amalgam of recommendations and conventions, procedures and rights that governs antarctic development. The rationale for studying protected areas and the characteristics of the ATS which are important for natural resource conservation are summarized. Existing terrestrial and marine protected areas are analyzed and threats to them identified. A wide range of practical improvements to the network of protected areas is recommended. Implementing an antarctic conservation strategy, lessons which can be gained from arctic conservation, and closer working relations between SCAR and IUCN are included. (Auth.)

Doyle, T.J., **Antarctic Treaty: within or without?,** *Canberra. Australian National University. CRES. Resource and Environmental Studies,* 1989, No.1, Antarctica: policies and policy development. Edited by J. Handmer, p.49-62, 34 refs.

On the premise that very little is spent on campaigns to raise public awareness of conservation issues in Antarctica, it is suggested that a more egalitarian governing mechanism which gives a higher priority to conservation is needed for Antarctica. Alternative political structures include the World Park Treaty and the United Nations option, which emphasize stringent observance of more comprehensive conservation policies. However, many conservation organizations argue that these alternative structures are not viable. Instead they prefer the option of creating a 'Conservation Convention' within the existing structure of the Antarctic Treaty. This paper is followed by comments from A. Constable, representative to CCAMLR, reviewing T.J. Doyle's article. (Auth. mod.)

M-54329

Davis, B., **Australia and the future of Antarctica,** *Canberra. Australian National University. CRES. Resource and Environmental Studies,* 1989, No.1, Antarctica: policies and policy development. Edited by J. Handmer, p.63-69, 27 refs.

It is pointed out that the claimed benefits of the Antarctic Treaty include peaceful scientific cooperation, demilitarization of the region and careful environmental management of an area of outstanding natural beauty. There are dissenters from these views, expressing concern about the limitations and ambiguity of Treaty provisions; arguing that hidden political tensions and rivalries exist, or that current environmental safeguards are insufficient to ensure long-term conservation of the region. Given that the Treaty is prospectively open to review from 1991 onwards, it is suggested that this is an appropriate time to examine Australia's policy stance. (Auth. mod.)

DLC G17.S69

The classic concepts of political geography, beginning with the fundamental one of territory, have proven inadequate to an understanding of the geopolitics of Antarctica. On the basis of this reflection, the authors analyze the forms of interaction among antarctic space, power, and the strategies carried out. The international community is currently choosing between further development of traditional appropriative territorial policies and different, more innovative solutions in which Antarctica would assume extraterritorial status. This second, nontraditional solution is more favorable to peaceful development; indeed, not only the fully constituted territories but also places of virtual sovereignty are the cause of conflict and confrontation. Political geography, as a normative science, may contribute to the decision-making processes regarding antarctic space, identifying uses which reduce potential conflict and demonstrating that the renunciation of the creation of territory on the part of the states is more congenial to the common and peaceful use of the region. (Auth. mod.)

DLC G17.S69

The international legal aspects emerging from the Antarctic Treaty and the resulting convention are strictly bound to geographical problems and can be summarized as follows: territorial claims and the consequent politics of the sectors; safeguard of the antarctic ecosystem; and exploitation or protection of mineral resources in Antarctica. The main terms of the Treaty direct that Antarctica shall be used for peaceful purposes; that territorial claims shall be frozen; and provide freedom of scientific investigation. Conservation legislation in the region (regarding flora and fauna, and mineral resources) has been embodied in several conventions. (Auth. mod.)

Rothwell, D.R., **Maritime analysis of conflicting international law regimes in Antarctica and the southern ocean,** *Australian year book of international law, 1994,* 1994, Vol.15, p.155-181, 114 refs.

DLC JX3091.A9

Through the parallel development of the Antarctic Treaty System (ATS) and general and conventional international law provisions dealing with the law of the sea and protection of the international environment, there is now some overlap among the regimes. In addition, there exists in some provisions a conflict between the rights, duties and obligations of the State parties. This is partly a result of the impact of the Antarctic Treaty upon sovereignty and jurisdiction, the reliance of global instruments seeking to protect the environment upon State parties exercising domestic and extraterritorial jurisdiction, and the unique environmental conditions which exist in the region. This article explores these issues by particularly focussing on antarctic maritime claims, the deep seabed, resource management, and protection of the marine environment. In the process, an analysis is undertaken of relevant provisions adopted by Antarctic Treaty parties and of other international instruments having global application within the region.

Trofimov, V., **Legal status of Antarctica,** Moscow, Prometey, 1990, 140p., Notes and refs. p.122-138.

DLC KWX70.T76

The author discusses current international problems related to the legal status of Antarctica, including regulations dealing with economic development and protection of the antarctic environment. Particular attention is paid to the nature and character of the Soviet Union's rights in Antarctica. Emphasis is put on the legal basis of special rights of states that were original parties to the Antarctic Treaty, and their role in the development of Antarctica. The study deals with topical problems in the concept of "common heritage of mankind" and questions of legal regulation of various types of human activities, and compares provisions resulting from conventions on antarctic marine living resources and minerals. (Auth.)

M-54425

Chaturvedi, S., **Dawning of Antarctica: a geopolitical analysis,** New Delhi, Segment Books, 1990, 300p., Refs. passim.

DLC JX 4084.A5 C46

After a review of antarctic geography and history, an analysis is made of its complex geopolitical realities and dynamic perspective. Some of the following questions are addressed: what are the bases of territorial claims; how do these claims relate to the interests of the concerned parties; what is the political context of these claims; and is there a military and strategic spillover of these political considerations. India's objectives in Antarctica and the Indian role in the geopolitical framework are outlined.

Ulfstein, G., **Arctic and Antarctica: legal and political perspectives,** World Wilderness Congress, 5th, Tromsø, Norway, Sep. 1993: Arctic wilderness, edited by V.G. Martin and N. Tyler, Golden, CO, North American Press, 1995, p.148-151.

DLC QH77.A68W67 1993

There is an increasing awareness of the need for environmental protection in polar areas. The general emphasis on environmental protection is reflected in the 1992 United Nations Conference on the Environment and Development in Río de Janeiro. The polar areas are, however, extremely vulnerable to human activities, and they have been regarded as symbols of adventure and purity. The Arctic and Antarctic have therefore been the objects of special environmental concern. The factors affecting management problems and the legal and political framework for management in the two regions, and the differences in political perspectives between them, are reviewed.

DLC QH77.A68W67 1993

The earliest explorations of the polar regions by Westerners were conducted for geographical and scientific purposes, such as the quests for the Northwest Passage, and the North and South Poles. These expeditions did not inflict many human impacts on the regions being explored. However, modern scientific and commercial activities in these regions, supported by advanced technologies, have eroded the environmental integrity of the areas. As wild areas in the temperate and tropical regions of the planet continue to decline due to human activities, debate over the fate of polar regions has burgeoned. A survey of the current status of efforts aimed at creating and maintaining national parks and protected areas in polar regions is presented. Differences between the northern and southern polar regions are detailed. (Auth. mod.)

Mielke, J.E., Browne, M.A., **Antarctica: environmental protection, research, and conservation of resources,** *CRS report for Congress,* Apr. 5, 1995, 95-476 SPR, 10p.

This report provides a summary of the development and evolution of the Antarctic Treaty, with annexes, which together comprise the Antarctic Treaty System. The governing body of the ATS is described and its actions over the years, through recommendations of the Consultative Parties, are outlined. The Conventions and Protocols which focus on five specific environmental and conservation concerns in antarctic regions are related and the current status of the most recent Protocol on Environmental Protection to the Antarctic Treaty is presented. It was signed in Madrid in October 1991 and would prohibit any mineral prospecting in antarctic regions, for other than scientific purposes, for at least fifty years. The Senate gave its advice and consent in October 1992; the required implementing legislation has not yet been agreed to.

Pinochet de la Barra, O., Gautier, P., **Development of the Antarctic Treaty System - Review of past developments,** International Symposium on the Future of the Antarctic Treaty System, Ushuaia, Argentina, Mar. 20-24, 1995. On the antarctic horizon. Proceedings. Edited by A. Jackson, [Kingston, Tasmania], Consejo Argentino para las Relaciones Internacionales/Australian Antarctic Foundation, [1995], p.7-22.

In reviewing and discussing the evolution of the Antarctic Treaty System, the conclusion is reached on what lessons are to be derived from the past to help meet the challenges of the future. The focus is on three basic elements: Article IV of the Antarctic Treaty and the "common administration" of Antarctica; promotion of science; and protection of the environment.

M-55298

Karev, S., Arvesen, J., **Relations with international organisations - UNEP, IMO, FAO, WMO, ICAO, and UNGA,** International Symposium on the Future of the Antarctic Treaty System, Ushuaia, Argentina, Mar. 20-24, 1995. On the antarctic horizon. Proceedings. Edited by A. Jackson, [Kingston, Tasmania], Consejo Argentino para las Relaciones Internacionales/Australian Antarctic Foundation, [1995], p.43-56.

The relationship between the Madrid Protocol and the United Nations Convention on the Law of the Sea is discussed at length; problems and inconsistencies are pointed out. Cooperation between the Antarctic Treaty Consultative Meeting and other international organizations, in particular with the United Nations Environment Program, is advocated.

M-55301

Wolfrum, R., Orrego Vicuña, F., **Possible challenges and the future development of the Antarctic Treaty System,** International Symposium on the Future of the Antarctic Treaty System, Ushuaia, Argentina, Mar. 20-24, 1995. On the antarctic horizon. Proceedings. Edited by A. Jackson, [Kingston, Tasmania], Consejo Argentino para las Relaciones Internacionales/Australian Antarctic Foundation, [1995], p.85-102.

The essence of this session's discussion concerns the need to improve the effectiveness of the Antarctic Treaty System. Highlights of a few aspects deal with institutional arrangements, pointing out that the basic institutional structure of the Treaty system may need some consolidation and refinement; the need for a secretariat; legal developments, including the approach to decision making; and enforcement, examining the question of port state jurisdiction.

M-55302

Beltramino, J.C., **Some considerations on the future of the Antarctic Treaty System,** International Symposium on the Future of the Antarctic Treaty System, Ushuaia, Argentina, Mar. 20-24, 1995. On the antarctic horizon. Proceedings. Edited by A. Jackson, [Kingston, Tasmania], Consejo Argentino para las Relaciones Internacionales/Australian Antarctic Foundation, [1995], p.103-107.

In this supplementary paper to the 7 leading articles in this volume, the author considers the following: the main trends in the Antarctic Treaty System (ATS) during the last decade; the ATS in its historic and political framework; future internal and external challenges to the ATS, examining negative influences and major disruptions; and developing and strengthening the ATS.

M-55354

Manzoni, M., Pagnini, P., **Symbolic territory of Antarctica,** *Political geography,* 1996, 15(5), p.359-364, 1 note.

Territorial production in Antarctica, politics and the antarctic territory, and the normative role of political geography in Antarctica are the subjects of this Comment. It is concluded that occupation, under the southern polar region's geographic and environmental conditions, creates a spatial order upon which power works only weakly and which, therefore, does not correspond to the current accepted meaning of territory. It is suggested that, from a scientific point of view, the most appropriate concept for defining the political condition of antarctic space is that of metaterritory.

M-55360

Colacrai de Trevisan, M., **Madrid Protocol: a vital compromise for the consolidation of the antarctic regime** [Protocolo al Tratado Antártico sobre Protección del Medio Ambiente: un vital compromiso a la consolidación del régimen antártico], *Boletin Antártico Chileno,* May 1996, 15(1), p.9-12, In Spanish. 8 refs.

The environmental concerns leading to the adoption and implementation of the Madrid Protocol and the Protocol's contribution to the consolidation of the antarctic regime are discussed. Special conventions developed within the above framework, including CCAS, CCAMLR and CRAMRA, are reviewed. Certain considerations concerning Latinoamerican cooperation in dealing with the new challenge of coordinating antarctic politics are presented.

U.S. Department of State, U.S. Arms Control and Disarmament Agency, **Report of the United States Antarctic Inspection, Feb. 9 to Mar. 11, 1995,** Washington, D.C., 1995, 79p.

This Team Report in 2 parts provides results of inspections made under the terms of the Antarctic Treaty by U.S. representatives at antarctic stations of 8 countries. The stations' activities, facilities and personnel, scientific programs, equipment, logistics and tourism are described. No violations of the Antarctic Treaty were observed during the 1995 inspection. Access to any and all areas of stations visited was readily accorded to the inspection team. Station leaders and personnel were frank and open in discussion of their station operations, from research activities to logistical support.

M-55432

Chaturvedi, S., **Polar regions: a political geography,** Cambridge, UK, Scott Polar Research Institute, University of Cambridge, 1996, 306p., Refs. p.269-296.

This book proposes that the "poles apart", *sui generis* theme is outdated and should not be allowed to obscure either the manner in which the polar scene today both reflects and influences international relations in general or the fact that existing polar controversies are merely arctic and antarctic manifestations of the linkages as well as contradictions between economic growth and the imperatives of environmental conservation, sometimes so casually covered under the term "sustainable development". It studies the two polar regions together as "social science laboratories", testing some of the assumptions of the new geopolitics and evaluating its promise and prospects there. (Auth.)

M-55444

U.S. Executive Office of the President. National Science and Technology Council. Committee on Fundamental Science, **United States Antarctic Program,** Washington, D.C., Apr. 1996, 67p.

The United States has important foreign policy, national security, scientific, and environmental interests in Antarctica. A strong year-round presence in the area, in the form of cutting-edge scientific research supported by infrastructure at three research stations, is the principal means of realizing these interests. The Amundsen-Scott Station at the South Pole is of particular importance in this regard, but its buildings and associated life-support systems are nearing the end of their design life and are in need of replacement. The estimated cost of replacement is substantial, and this, combined with current and anticipated budget constraints, raises important issues concerning the U.S. Antarctic Program (USAP). In particular, the Senate Appropriations Committee has expressed concern over the costs of the USAP, questioned whether the existing policy to maintain a presence in Antarctica is still valid, and has called for the National Science and Technology Council to undertake a Government-wide review of that policy and to examine options that can reduce the annual operating cost. This document reports the results of that review.

DLC K5.N83 1991

This article's purpose is to determine how Antarctica's environment best can be protected. Proponents of the Convention on the Regulation of Antarctic Mineral Resources Activities (CRAMRA) believe that the Antarctic Treaty members need to enter into a minerals regime in order to avoid an unregulated gold rush in Antarctica. They argue that only by ratifying a minerals regime will Treaty members be able to control and regulate mineral exploitation in Antarctica. Critics of CRAMRA advocate a complete ban on mineral exploration and exploitation. They propose that setting aside Antarctica as a World Park is the only way to protect Antarctica's environment. This article examines both the World Park proposal and CRAMRA to determine which is better for the antarctic environment. Although the article discusses geopolitical influences, it only looks at these influences as they affect environmental protection. It is concluded that the best way to prevent the despoliation of Antarctica is to follow the recommendations of environmentalists and to prohibit minerals exploration in the antarctic region permanently.

Kaye, S., Rothwell, D.R., **Australia's antarctic maritime claims and boundaries,** *Ocean development & international law,* July-Sep. 1995, 26(3), p.195-226, Refs. p.216-226.

DLC JX1.O25

Since the Antarctic Treaty was negotiated in 1959, there have been substantial developments in the law of the sea. One of the most significant developments has been the recognition granted to coastal state entitlements to claim a range of offshore maritime areas. Yet, one of the principal aims of the Antarctic Treaty was to eliminate sovereignty disputes between territorial claimants, and the treaty placed limitations on the assertion of new claims. Nevertheless, most antarctic territorial claimants have asserted some form of antarctic maritime claims. This article particularly considers Australia's position toward maritime claims offshore of the Australian Antarctic Territory (AAT). It reviews the limitations imposed by the Antarctic Treaty, the difficulties in determining baselines in Antarctica, Australia's practice in declaring antarctic maritime claims, and the potential range of maritime boundaries that Australia may one day have to delimit with neighboring states in the southern ocean. (Auth.)

Simmonds, K.R., **Antarctic conventions,** London, Simmonds & Hill Publishing Ltd, 1993, 324p., Refs. p.317-324.

DLC KWX706.A23S58

The purpose of the material presented is to review the changed direction and focus of the debate and nature of the challenges to the Antarctic Treaty System that became crystallized by the negotiation and the signing of the Convention on the Regulation of Antarctic Mineral Resource Activities (CRAMRA) in 1988, and by the subsequent negotiation and signing of the Protocol on Environmental Protection to the Antarctic Treaty in 1991. The text includes the Articles of the Antarctic Treaty, of CRAMRA and of the Protocol, as well as the Articles of the Convention on the Conservation of Antarctic Seals, 1972, and the Convention on the Conservation of Antarctic Marine Living Resources, 1980.

1993 Fenner Conference on the Environment, Handmer, J., ed, Wilder, M., ed, **Towards a conservation strategy for the Australian Antarctic Territory,** Canberra, Australian National University, May 1993, 216p., Refs. passim. For individual papers see A-55529, A-55530, A-55533, A-55536, B-55532, M-55531, M-55534 and M-55535.

This volume contains the proceedings of the 1993 Fenner Conference on the Environment, which was held as a step in the preparation of a conservation strategy for the Australian Antarctic Territory (ATT). The volume consists of 2 parts: Conference papers in pt.1, in which the participants and various specialists consider broad issues critical to the conservation and management of the ATT and the adjacent southern ocean, and pt.2, which contains an edited version of each of seven working group reports, and the discussion each report generated when presented at a plenary session.

Hemmings, A.D., Goldsworthy, L., **Why is an Antarctic conservation strategy necessary?,** 1993 Fenner Conference on the Environment. Proceedings. Towards a conservation strategy for the Australian Antarctic Territory, edited by J. Handmer and M. Wilder, Canberra, Australian National University, May 1993, p.41-52, 12 refs.

It is argued that Australia, as claimant to some 42% of the antarctic continent, and with sovereignty over several subantarctic islands, needs an integrated approach to the region. It needs structures through which to manage—and if necessary adjudicate between—the various values seen in Antarctica. The Australian Antarctic Conservation Strategy will need to embrace the reality of other national operators in the Australian Antarctic Territory. With Australia as a prime mover in the process of achieving the Madrid Protocol, further Australian initiatives are likely to carry considerable international influence. As a management plan, the Strategy will provide an international model on an enormous scale, with a significance beyond the antarctic context. (Auth. mod.)

Sayers, J., **Infrastructure development and environmental management in Antarctica,** 1993 Fenner Conference on the Environment. Proceedings. Towards a conservation strategy for the Australian Antarctic Territory, edited by J. Handmer and M. Wilder, Canberra, Australian National University, May 1993, p.109-147, 13 refs.

Australia's antarctic infrastructure has developed in response to priorities and goals which were determined up to 50 years ago. The original infrastructure reflected the then logistic constraints, as well as the national priority of being seen to preserve a substantial territorial claim. On the premise that national antarctic programs have to meet contemporary standards, this paper examines how Australia's antarctic logistic infrastructure has responded to the changing circumstances of the Antarctic. It questions whether the logistic systems which have evolved over the last five decades are now appropriate at a time when all government activities are expected to improve efficiency and do more with less. The paper concludes that Australia must think creatively about providing a logistic infrastructure that will continue to meet national priorities in the Antarctic into the next century. (Auth. mod.)

Simmonds, K.R., **International legal protection of the environment: towards a new legal regime for Antarctica,** *Oil & gas law and taxation review,* 1990, 8(10), p.337-343, 59 refs.

DLC K3911.2.O35 1989-90

The purpose of this paper is to review, principally in the light of events since 1983, the changed direction and focus of the debate over the legal, political and scientific issues and the nature of the challenges to the Antarctic Treaty System. These have become crystallized, in large measure, by the negotiation and the signing at Wellington, New Zealand on Nov. 25, 1988 of the Convention on the Regulation of Antarctic Mineral Resource Activities (CRAMRA).

M-55768

Beck, P.J., **Antarctica: The Antarctic Treaty System after thirty years,** *World boundaries series,* 1994, Vol.1, Global boundaries. Edited by C.H. Schofield, p.76-97, Refs. p.95-97.

DLC JX4111.G56 1994

The question of sovereignty and boundaries in relation to Antarctica is discussed, and attitudes toward the Antarctic Treaty System from late 1950s to 1991 are examined.

M-55769

Arenas, H.S., **Future of the Antarctic Treaty—thirty years on,** *World boundaries series,* 1994, Vol.1, Global boundaries. Edited by C.H. Schofield, p.98-111, 12 refs.

DLC JX4111.G56 1994

The political and geographic evolution of Antarctica, from territorial claims to international property, is discussed; and future prospects for the Antarctic Treaty System, regarding minerals development, common heritage and geostrategic objectives, are evaluated.

M-55770
Auburn, F., **Antarctic legal system,** *World boundaries series,* 1994, Vol.1, Global boundaries. Edited by C.H. Schofield, p.112-118, 15 refs.

DLC JX4111.G56 1994

Legal issues arising under the Antarctic Treaty System are discussed, including review and amendment procedures, sovereignty and jurisdiction, criminal law and torts.

Moneta, C.J., **Antarctica and international politics** [La Antártida y la política internacional], *Geopolitica. Hacia una doctrina nacional,* Jan.-Mar. 1991, No.42, p.59-63, In Spanish. 2 refs.

DLC F2834.G46 1991

Changes affecting the role of Antarctica in international politics in the late 1980s are discussed. An overview is presented of international cooperation in past and future activities necessary to protect the antarctic environment.

M-55807
Pineschi, L., **Environmental protection in Antarctica** [La protezione dell'ambiente in Antartide], Università degli studi di Parma. Pubblicazioni della Facoltà di Giurisprudenza, nuova serie, 16, Padua, CEDAM, 1993, 488p., In Italian with English summary. Refs. p.437-460.

DLC KWX705.P56 1993

The adoption of the Protocol on Environmental Protection to the Antarctic Treaty (PEPAT) is described as a definite step toward an environmentally oriented antarctic regime, confirming the practice of the Treaty Consultative Parties with problems requiring international cooperation in a constructive spirit. This book analyzes and evaluates PEPAT, not only in itself with its merits and shortcomings, but also in the light of current trends of international environmental law, including customary and Treaty law. The material is divided in 3 parts, addressing the following issues: Application of international environmental law to the antarctic continent and its surrounding waters; Protection and conservation of antarctic flora and fauna; and Regulation of human activities potentially dangerous to the antarctic environment.

M-55808
U.S. Congress. House. Subcommittee on Economic Policy, Trade and Environment of the Committee on Foreign Affairs and Committee on Merchant Marine and Fisheries, **Joint hearing on implementing legislation for the Protocol on Environmental Protection to the Antarctic Treaty,** Washington, D.C., U.S. Government Printing Office, 1994, 162p.

DLC KF27.F6465 1993j

In order for the United States to ratify the Environmental Protocol, Congress had to approve implementation legislation governing American activities in Antarctica. The hearing on Nov. 16, 1993 was called to examine the administration's views on the appropriate implementing legislation, as well as the views of the private sector. Oral statements taken from 5 witnesses, some of which have raised concerns about the administration's Antarctica proposal, especially on the issue of waste disposal, are presented. Four prepared statements and testimony submitted for the record from 9 parties are included.

M-55809
U.S. Congress. Senate. Committee on Commerce, Science, and Transportation, **Hearing on S. 1427, the Antarctic Scientific Research, Tourism, and Marine Resources Act of 1993, to implement the Protocol on Environmental Protection to the Antarctic Treaty,** Washington, D.C., U.S. Government Printing Office, 1994, 96p.

DLC KF26.C69 1993al

The hearing convened on Oct. 20, 1993 to discuss a draft bill from the administration entitled the "Antarctic Environmental Protection Act of 1993", to find answers to questions about provisions of the bill dealing with waste disposal and on how to treat citizen suits, and to discuss legislation to implement the Protocol on Environmental Protection to the Antarctic Treaty. Oral and written statements were taken from 6 witnesses representing the National Research Council, the Environmental Defense Fund, Greenpeace, Department of State, the International Association of Antarctic Tour Operators, and the National Science Foundation, who were responding to questions from members of the Committee.

Rubattino, H.J., Pagano, H.S., Flagueras, P., Snyder, M., **Antarctica: current status and probable evolution as of 1991. Prospects for a new strategy** [La Antártida. Situación actual y probable evolución a partir de 1991. Perspectivas hacia una nueva estrategia], *Geopolitica,* July-Sep. 1990, No.41, p.31-45, In Spanish. 28 refs.

DLC F2834.G46 1990

A review is presented of events leading to the signing of the Antarctic Treaty in 1961; a historic analysis of the political situation and position of signatory countries in general, and Argentina in particular, at the time of the Treaty implementation; antarctic resources; the evolution of the Antarctic Treaty System (ATS) and possible alternatives of its future development which could directly affect Argentina. The second part of the article expands on the above themes, considering the process of modifying the Treaty as of 1991; the issue of sovereignty and jurisdiction; the peaceful coexistence of claimants and their objectives regarding antarctic living and mineral resources; and the legal, political and economic features of the ATS.

Preface to the UARS experiment [1996, eng] **A-56149**
Gille, S.T.
Scales of spatial and temporal variability in the southern ocean [1996, eng] **J-55169**
Gillingham, P.R.
Antarctic astronomy, international developments and Australia [1992, eng] **K-54225**
Super seeing from the Australian Antarctic Territory? [1992, eng] **K-54226**
Giménez, E.
Antarctic automatic instrumentation for general data acquisition [1990, spa] **I-55269**
Gingele, F.
Clay mineral distribution in antarctic oceanic surface sediments [1996, eng] **J-55079**
Ginzburg, M.
Ozone observations on Antarctic Peninsula [1993, spa] **I-54518**
Giovinetto, M.B.
Sea ice extent and surface mass accumulation in Amundsen, Bellingshausen and Weddell seas [1993, eng] **F-54517**
Gipp, M.
Review of Tertiary glaciation in King George Bay [1990, eng] **E-55348**
Giret, A.
Adélie coast revisited: evidence for a Proterozoic tectonic collage [1996, fre] **E-54664**
Hotspots in Kerguelen xenoliths [1996, eng] **E-55226**
Glaccum, W.
Polar Ozone and Aerosol Measurement instrument [1996, eng] **I-55350**
Glatts, R.C.
Effects of pack ice on Weddell Sea plankton distribution [1995, eng] **B-54809**
Gleadow, A.J.W.
Architecture of Gondwana during rifting between Australia and Antarctica [1993, eng] **E-55570**
Reconnaissance apatite fission-track data from the East Antarctic Shield [1993, eng] **E-55571**
Uplift of the Transantarctic Mountains [1988, eng] **E-55646**
Gleitz, M.
Carbon acquisition and growth of antarctic sea ice diatoms in closed bottle incubations [1996, eng] **B-55215**
Microbial biology of melting Weddell Sea ice [1996, eng] **B-55313**
Gliesche, C.G.
Plasmid pAA-1 transformation in cryptoendolithic bacterium [1996, eng] **B-56111**
Gliksberg, I.
Uruguay in antarctica: a new horizon, a challenge [1994, spa] **A-54826**
Gloersen, P.
Global sea ice coverage [1993, eng] **F-55814**
Glowienka-Hense, R.
GCM response to an antarctic polynya [1995, eng] **I-54419**
Gobbi, G.P.
Distributions of volcanic aerosols in antarctic polar stratospheric clouds [1995, eng] **I-54349**
Lidar observations of stratospheric temperature above McMurdo Station, Antarctica [1996, eng] **I-55303**
Polar stratospheric clouds observed by lidar at McMurdo Station during the 1993 winter [1994, eng] **I-54831**
Goddard, J.
CO_2 pressure in the Pacific Ocean surface waters in summers of 1992 and 1994 [1994, eng] **J-54159**

Godlewska, M.
Krill biomass variations in West Antarctica, 1981-1989 [1993, eng] B-54137
Goerke, H.
Organochlorine compounds in fish off the Antarctic Peninsula [1996, eng] B-56057
Goerke, R.T.
Seasonal variations of quasiperiodic VLF emissions [1994, eng] K-55125
Gogineni, P.
C-band backscatter measurements of winter sea-ice in the Weddell Sea, Antarctica [1995. eng] F-54060
Gogineni, S.P.
Field observations of microwave backscatter from Weddell Sea ice [1996, eng] F-54420
Gohin, F.
Contributions of ERS-1 to sea ice observation on an ocean-wide scale [1994, fre] F-56338
Potential role of ERS-1 scatterometer data in support of ice navigation [1994, eng] F-55781
Golden, B.
Microalgae epilithic productivity shows high sensitivity to ultraviolet-B radiation [1994, eng] B-54842
Goldman, A.
Infrared balloon-borne ground-based and laboratory spectra [1989, eng] I-55846
Goldspink, G.
Fish adaptation to different temperatures by changes in gene expression [1995, eng] B-54193
Goldstein, P.
Synaptonemal complexes of the meiotic parthenogenetic nematode *Panagrolaimus davidi* [1996, eng] B-56115
Goldstein, S.L.
Implications of Heard Island geochemistry for Indian Ocean mantle [1994, eng] E-54398
Goldsworthy, L.
Why is an Antarctic conservation strategy necessary? [1993, eng] M-55531
Golovnia, R.V.
Changes in volatile organic bases during canning of krill [1986, rus] B-56326
Volatile organic bases in canned krill [1986, rus] B-56325
Golubeva, E.N.
Numerical modeling of the world ocean circulation with the upper mixed-layer parametrization [1992, rus] J-55468
Gomez Garcia, V.H.
Hydroponic cultivation, a feasible activity for development in Antarctica [1993, spa] B-54508
Gômez Ulla, H.M.C.
Cardiovascular adaptation to cold-environment stress [1990, spa] H-55272
Gômez, I.
Photosynthesis, dark respiration and pigment contents of *Desmarestia menziesii* [1996, eng] B-56256
Photosynthetic characteristics of antarctic macroalgae [1996, eng] B-56288
Photosynthetic variations in the brown alga *Ascoseira mirabilis* [1996, eng] B-55388
Gon, O.
Glycoprotein antifreeze in *Notothenia coriiceps* from Marion I. [1994, eng] B-54175
Gondwana Symposium, 8th, Hobart, TAS, Australia, June 21-24, 1991
Gondwana eight: assembly, evolution and dispersal [1993, eng] E-55548
Gong, M.
Amino acid composition in marine sediments off the Antarctic Peninsula [1989, chi] E-55719
Preliminary study on sterols in sediment in the sea area near Livingston Island [1989, chi] E-55720
Gonzalez Colaso, R.A.
Southern elephant seal *(Mirounga leonina)*. 2 [1996, eng] B-55187
Gonzalez, S.R.
Dominant copepods of the Weddell Sea [1995, eng] B-54126
González-Bonorino, G.
Inverse relation between ice extent and the late Paleozoic glacial record of Gondwana [1995, eng] E-54059
Gonzalez-Cabrera, P.J.
Na^+/K^+-ATPase in antarctic fish [1995, eng] B-54910
Gooday, A.J.
Classification uncertainties within foraminifera species in McMurdo Sound, Antarctica [1995, eng] B-54446
Foraminifera of Explorers Cove [1994, eng] B-54282
Taxonomy and ecology of the foraminifer *Crithionina delacai* from Explorers Cove [1995, eng] B-54185
Goodge, J.W.
Geology of the Lanterman Metamorphic Complex, Victoria Land [1994, eng] E-54082
Thermal evolution within the Ross Orogen, Antarctica [1996, eng] E-55352
Goodrick, S.
Modeling of the coupled katabatic/ocean and ice systems of the Antarctic [1995, eng] I-56228
Goodrick, S.L.
Modeling the coupled ocean—katabatic wind systems of the Antarctic [1994, eng] I-54849
Goodwin, A.H.
Topographic origin for double-ridge features in visible imagery of ice divides in Antarctica [1995, eng] F-54067

Environmental management of the McMurdo Dry Valleys: NSF Workshop, 1995. Report [1996, eng] B-55988
Light adaptation of cyanobacteria [1993, eng] B-54991
Vinocur, A.
Chlorophyll-*a* summer vertical distribution in Boeckella Lake [1996, eng] B-55588
Viotti, R.
Antarctica as a center for astronomical observations [1995, ita] K-54776
Astrophysical value of continuous photometric monitoring from the Antarctic Plateau [1996, eng] K-55174
Viramonte, J.G.
Magnetic profiles of the fracture system of northwestern Deception I. [1990, spa] L-55267
Origin and significance of acid magmas on Deception I. [1993, spa] E-54538
Petrogenic model for volcanic rocks on Deception I. [1993, spa] E-54545
Study of the magnetic field in Port Foster [1990, spa] L-55266
Thermal anomalies of the Deception volcano [1990, spa] E-55260
Volcanic rock enclaves of Kendall Terrace and Murature Bay [1990, spa] E-55259
Virginia, R.A.
Depth distribution of soil nematodes in Taylor Valley, Antarctica [1994, eng] B-54692
Soil and nematode distribution in Taylor Valley [1994, eng] E-54714
Virtue, P.
Energy metabolism in the sea urchin *Sterechinus neumayeri* [1994, eng] B-54286
Visbeek, J.G.
Birds of Thule I., South Sandwich Is. [1981, fre] B-54397
Maintenance and culture of antarctic organisms with control of physical and chemical variables [1993, spa] B-54511
Visconti, G.
Future chlorine-bromine loading and ozone depletion [1991, eng] I-54314
Visser, J.N.J.
Reconstruction of the late Palaeozoic ice sheet on southwestern Gondwana [1993, eng] E-55562
Viswanathan, G.M.
Lévy flight search patterns of wandering albatrosses [1996, eng] B-55624
Vitanage, P.W.
Review of the Precambrian geology of Sri Lanka and its comparison with Antarctica [1993, eng] E-55551
Viterbo, P.
Volcanic perturbation of the atmosphere in both polar regions: 1991-1994 [1996, eng] I-54486
Vitt, F.M.
Atmospheric ionization detected by nitrate measurements in snow [1995, eng] K-56335
Vogt, T.
Secondary precipitates in Pleistocene and present cryogenic environments [1996, eng] E-54654
Von Biel, H.A.
Ionisation below 55 km in the antarctic mesosphere [1992, eng] K-54219
Von Guerard, P.
McMurdo LTER: Streamflow measurements in Taylor Valley [1994, eng] E-54715
Vonder Haar, T.H.
Meteorological satellite instrumentation [1995, eng] C-54424
Voronina, N.M.
Euphausiid larvae in the Pacific sector of the Antarctic, 1992 [1995, eng] B-56193
Vosjan, J.H.
Microbial biomass and light attenuation in the Weddell Sea [1996, eng] B-55047

Voskoboĭnikova, O.S.
- Systematics and phylogeny of antarctic dragonfishes (Bathydraconidae, Notothenioidei, Perciformes) [1995, eng] **B-55162**

Vovk, V.IA.
- Diagnostics of the polar ionosphere using oblique and reverse-oblique sounding [1991, rus] **K-54167**

EXPLOITATION

Antarctic fishing and its likely development [1993, eng] A-55533
Antarctic krill fishery (*Euphausia superba* Dana) and problems of the rational exploitation of its resources [1993, rus] A-54964
Changes in volatile organic bases during canning of krill [1986, rus] **B-56326**
Comparison of antarctic krill caught by nets and taken by macaroni penguins [1996, eng] **B-56186**

Competition between the krill fishery and penguins in the South Shetland Islands [1996, eng] **B-54689**
Differences between krill caught by predators and by net [1996, eng] **B-56187**
Environment-krill relations in the South Georgia marine ecosystem [1996, eng] **B-56097**
Fishes captured by the krill fishing vessel *Chiyo Maru* in area 58, Jan.-Mar. 1995 [1996, eng] A-56103
Krill biomass variations in West Antarctica, 1981-1989 [1993, eng] **B-54137**
Krill—the ecology of aggregation [1994, eng] **B-54384**
Model of penguin foraging demands and krill fishery overlap near the South Shetland Is. [1995, eng] **B-54432**
Modelling attempts of effects of different levels of krill fishing on predators [1995, eng] **B-54431**
Percentage of gravid female krill found during the "Antártida 86 11" expedition [1990, spa] A-55240
Physico-mechanical and hygroscopic properties of antarctic shrimp meal [1986, rus] **B-56327**
Precutionary measures for the krill fishery [1996, eng] **B-56096**
Proceedings [1989, chi] A-55705
Report of the SC-CAMLR 14th meeting, 1995 [1995, eng] **B-55470**
Research on catching antarctic krill using a midwater trawl with nylon canvas spreaders [1989, chi] A-55743
School searching and echo sounder image analysis of krill (*Euphausia superba*) [1989, chi] **B-55742**
Spatial distribution of krill during the "Antártida 86 11" expedition [1990, spa] A-55239
Stabilized enzymes of antarctic krill [1996, eng] **B-54754**
Volatile organic bases in canned krill [1986, rus] **B-56325**

GEOGRAPHIC DISTRIBUTION
Amphipod crustaceans as an important component of the faunal groups on the ocean bottom [1989, pol] **B-54373**
Amphipod fauna of the South Shetlands and Bransfield Strait [1995, eng] **B-56190**
Amphipod faunal diversity in two polar fjords: Admiralty Bay and Hornsund [1995, eng] **B-56191**
Antarctic benthic ostracods 7: from King George I. [1991, ger] **B-55498**
Antarctic benthic ostracods II. Part 2: Elephant I. and Bransfield Strait [1987, ger] **B-55485**
Antarctic krill in waters northwest of the Antarctic Peninsula [1989, chi] **B-55727**
Antarctic neritic krill *Euphausia crystallorophias*: spatio-temporal distribution, growth and grazing rates [1996, eng] **B-55161**
Barnacles on southern elephant seal skin [1995, eng] **B-55013**
Competition between the krill fishery and penguins in the South Shetland Islands [1996, eng] **B-54689**
Copepoda from the water area northwest of the Antarctic Peninsula [1989, chi] **B-55734**
Cretaceous and Paleogene decapods from high latitudes [1994, eng] **E-54070**
Cyclopoida of the Bransfield Strait [1993, eng] **B-54136**
Deep-sea shrimp from the Antarctic [1996, eng] **B-55456**
Do antarctic benthic invertebrates show an extended level of eurybathy? [1996, eng] **B-54548**
Dominant copepods of the Weddell Sea [1995, eng] **B-54126**
Ecosystem of the sea ice in Antarctica [1989, pol] **F-54357**
Euphausiid larvae in the Antarctic Circumpolar Current-Weddell Sea Confluence Zone in winter [1992, rus] **B-55467**
Euphausiid larvae in the eastern Weddell Gyre [1992, rus] **B-55466**
Euphausiid larvae in the Pacific sector of the Antarctic, 1992 [1995, eng] **B-56193**
Faunistic makroplankton complexes in the Commonwealth Sea [1993, rus] **B-54963**
Fresh- and salt-water Rotifers and Crustaceans of Antarctica [1993,] **B-56036**
Krill biomass variations in West Antarctica, 1981-1989 [1993, eng] **B-54137**
Krill distribution and abundance near Elephant I., summer 1993-1994 [1994, eng] A-54695
Krill larvae in waters northwest of the Antarctic Peninsula [1989, chi] **B-55726**
Laophontidae n.sp.(Copepoda: Harpacticoida) from the Weddell Sea [1996, eng] **B-55984**
Life cycles of Weddell Sea copepods [1995, eng] **B-54125**
Life strategies of a Bellingshausen Sea copepod [1996, ger] **B-56131**
New *Echiniphimedia* species from Antarctica [1988, ger] **B-55489**
Notes on *Oradarea* n.sp. and other eusirids [1995, eng] **B-55612**
Observations of antarctic sea birds during the summer of 1984-1985 [1989, chi] **B-55761**
Ostracods *Heterocyprideis sorbyana* found on Elephant I. [1994, ger] **B-55502**
Phytoplankton, chlorophyll-*a* and krill distribution in waters northwest of the Antarctic Peninsula [1989, chi] **B-55731**
Pliocene Ostracoda from the *Pecten* Conglomerate of Cockburn I. [1996, eng] **E-55913**
School searching and echo sounder image analysis of krill (*Euphausia superba*) [1989, chi] **B-55742**
Spatial and behavioral responses by foraging seabirds to antarctic krill swarms [1994, eng] **B-54290**
Spatial distribution of krill during the "Antártida 86 11" expedition [1990, spa] A-55239
Surface water circulation in krill fishing areas near the South Shetland Islands [1996, eng] **J-56104**
Two dominant antarctic copepod distribution and population dynamics in different water masses during summer [1996, eng] **B-56188**
Vertebrate predators and their spatial association with krill [1994, eng] **B-54701**
XVI Polar Symposium: Achievements and Prospects of Polish Polar Research, Toruń, Sep. 19-20, 1989 [1989, pol] E-54353

MIGRATION
Daily vertical migration of antarctic copepods beneath the ice [1995, eng] **B-54563**
Diel periodicity of subantarctic copepods [1996, eng] **B-55979**
Vertical distribution seasonal changes in the *Metridia gerlachei* population, Croker Passage [1993, eng] **B-54143**

MORPHOLOGY
Antarctic benthic ostracods 3: from South Orkney Is. [1988, ger] **B-55490**
Antarctic benthic ostracods 4: from South Georgia [1989, ger] **B-55494**
Antarctic benthic ostracods 7: from King George I. [1991, ger] **B-55498**
Antarctic benthic ostracods II. Part 2: Elephant I. and Bransfield Strait [1987, ger] **B-55485**
Antarctic benthic ostracods. 10. [1994, ger] **B-55501**
Antarctic species of the genus *Munna* Krøyer, 1839 [1994, eng] **B-56052**
Antatelson tuberculatum, new species of Thaumatelson from Antarctica [1989, ger] **B-55493**
Benthic ostracods from Elephant I. and the Antarctic Peninsula [1989, ger] **B-55495**
Cirripedia (Crustacea) in waters northwest of the Antarctic Peninsula [1989, chi] **B-55733**
Comparison of antarctic krill caught by nets and taken by macaroni penguins [1996, eng] **B-56186**
Copepoda from the water area northwest of the Antarctic Peninsula [1989, chi] **B-55734**
Crystalline cones from eyes of *Euphausia superba* Dana [1994, eng] **B-55580**
Deep-sea shrimp from the Antarctic [1996, eng] **B-55456**
Differences between krill caught by predators and by net [1996, eng] **B-56187**
Feeding ecology of *Branchinecta gaini* at Potter Cove [1996, eng] **B-54684**
Fossil homolodromiid crab from King George I. [1995, chi] **E-54595**
Laboratory study on the fecundity of antarctic krill [1995, chi] **B-54579**
Laophontidae n.sp.(Copepoda: Harpacticoida) from the Weddell Sea [1996, eng] **B-55984**
Magellanic valvifera [1995, eng] **B-55400**
New *Echiniphimedia* species from Antarctica [1988, ger] **B-55489**
New species of *Donsiella* (Copepoda: Harpacticoida) from Macquarie I. [1990, eng] **B-55064**
Notes on *Oradarea* n.sp. and other eusirids [1995, eng] **B-55612**
Oocyte number and composition in gravid krill females [1996, chi] **B-55875**
Pliocene Ostracoda from the *Pecten* Conglomerate of Cockburn I. [1996, eng] **E-55913**
Redescription of *Maxilliphimedia longipes* (Walker, 1906) from the Antarctic Peninsula [1991, eng] **B-55057**
Relationship between crystalline cone number and growth in krill [1995, chi] **B-54577**
Relationship between the compound-eye diameter and growth in krill [1996, chi] **B-55322**
Systemic status of a copepod parasite of antarctic teleosts [1996, eng] **B-55455**
Two new acanthonotozomatids from the Bransfield Strait [1988, ger] **B-55488**

NUTRITION
Antarctic krill (*Euphausia superba* Dana) eat salps [1996, eng] **B-55960**
Antarctic krill enzyme physiology [1996, eng] **B-55410**
Antarctic krill *Thysanoessa macrura* fills a major gap in marine lipogenic pathways [1996, eng] **B-55283**

Antarctic neritic krill *Euphausia crystallorophias*: spatio-temporal distribution, growth and grazing rates [1996, eng] **B-55161**
Autumnal sea ice biota in polar seas [1996, eng] **B-55447**
Copepod feeding behavior, Bellingshausen Sea [1995, eng] **B-54123**
Diel periodicity of subantarctic copepods [1996, eng] **B-55979**
Feeding ecology of *Branchinecta gaini* at Potter Cove [1996, eng] **B-54684**
Filtration and ingestion rates of krill *in vitro* and *in situ* [1995, eng] **B-54567**
Gut evacuation rates and pigment destruction in the antarctic krill *Euphausia superba* [1996, eng] **B-55277**
Life cycles of Weddell Sea copepods [1995, eng] **B-54125**
Life strategies of a Bellingshausen Sea copepod [1996, ger] **B-56131**
Lipid storage patterns of two species of copepod [1996, eng] **B-55981**
Observations on carnivorous feeding in Antarctic calanoid copepods [1995, eng] **B-54649**
Ocean food web at King George Island [1996, ger] **B-55818**
Polar herbiverous copepods [1995, eng] **B-54122**
Seasonal amphipod trophodynamics in the South Georgia region [1996, eng] **B-55282**
Seasonal lipid storage as overwintering strategy of antarctic krill [1996, eng] **B-55281**
Stable isotope composition of larval krill and its winter food sources [1996, eng] **B-55980**
Subantarctic copepods in a low chlorophyll marine environment [1996, eng] **B-54648**

PATHOLOGY
Behavior of antarctic benthic invertebrates exposed to contamination [1995, eng] **B-54192**

PHYSIOLOGY
Antarctic krill enzyme physiology [1996, eng] **B-55410**
Antarctic krill *Thysanoessa macrura* fills a major gap in marine lipogenic pathways [1996, eng] **B-55283**
Antarctic krill under perennial sea ice in the western Weddell Sea [1996, eng] **B-56277**
Antarctic neritic krill *Euphausia crystallorophias*: spatio-temporal distribution, growth and grazing rates [1996, eng] **B-55161**
Biochemical composition and inorganic elements of krill [1989, chi] **B-55740**
Changes in volatile organic bases during canning of krill [1986, rus] **B-56326**
Copepod adaptability to temperature and salinity in a salt lake [1989, chi] **B-55738**
Crystalline cones from eyes of *Euphausia superba* Dana [1994, eng] **B-55580**
Development of the parasite *Eubrachiella antarctica* [1993, eng] **B-54141**
Developmental rate of *Euphausia cristallorophias* larvae in Ellis Fjord [1996, eng] **B-55966**
Diel periodicity of subantarctic copepods [1996, eng] **B-55979**
Effect of salinity on oxygen metabolism of copepods in a salt lake [1989, chi] **B-55739**
Filtration and ingestion rates of krill *in vitro* and *in situ* [1995, eng] **B-54567**
Gut evacuation rates and pigment destruction in the antarctic krill *Euphausia superba* [1996, eng] **B-55277**
Isolation of polyenoic phosphatidylcholine and phosphatidylethanolamine from antarctic krill [1992, rus] **B-56328**
Krill stock structure and macrozooplankton abundance near Elephant I., Jan.-Mar. 1994 [1994, eng] **B-54696**
Life cycle of *Paralabidocera antarctica* at Showa Station [1996, eng] **B-55596**
Lipid storage patterns of two species of copepod [1996, eng] **B-55981**
Observations on carnivorous feeding in Antarctic calanoid copepods [1995, eng] **B-54649**
Oxygen consumption in antarctic tidal zone amphipods [1995, eng] **B-56192**
Physico-mechanical and hygroscopic properties of antarctic shrimp meal [1986, rus] **B-56327**
Polar herbiverous copepods [1995, eng] **B-54122**
Relationship between crystalline cone number and growth in krill [1995, chi] **B-54577**
Relationship between the compound-eye diameter and growth in krill [1996, chi] **B-55322**
Seasonal amphipod trophodynamics in the South Georgia region [1996, eng] **B-55282**
Seasonal changes in the respiration of *Drepanopus bispinosus* from Burton Lake [1995, eng] **B-54043**
Seasonal lipid dynamics in dominant antarctic copepods [1996, eng] **B-55364**
Seasonal lipid storage as overwintering strategy of antarctic krill [1996, eng] **B-55281**
Some properties of the enzyme preparation "Euphasiidin" [1992, rus] **B-56329**
Stabilized enzymes of antarctic krill [1996, eng] **B-54754**
Stable isotope composition of larval krill and its winter food sources [1996, eng] **B-55980**
Trace elements in tissues of chick and adult Adélie penguins [1996, eng] **B-55461**
Two dominant antarctic copepod distribution and population dynamics in different water masses during summer [1996, eng] **B-56188**
Vertical distribution seasonal changes in the *Metridia gerlachei* population, Croker Passage [1993, eng] **B-54143**
Volatile organic bases in canned krill [1986, rus] **B-56325**

POPULATION
Acoustic form of chinstrap penguin krill prey field [1996, eng] **B-54808**
Amphipod fauna of the South Shetlands and Bransfield Strait [1995, eng] **B-56190**
Antarctic krill fishery (*Euphausia superba* Dana) and problems of the rational exploitation of its resources [1993, rus] **A-54964**
Antarctic krill in waters northwest of the Antarctic Peninsula [1989, chi] **B-55727**
Antarctic krill under perennial sea ice in the western Weddell Sea [1996, eng] **B-56277**
Antarctic neritic krill *Euphausia crystallorophias*: spatio-temporal distribution, growth and grazing rates [1996, eng] **B-55161**
Competition between the krill fishery and penguins in the South Shetland Islands [1996, eng] **B-54689**
Cumacea (Crustacea, Malacostraca) of Admiralty Bay [1995, eng] **B-55577**
Cyclopoida of the Bransfield Strait [1993, eng] **B-54136**
Dominant copepods of the Weddell Sea [1995, eng] **B-54126**
Ecosystem of the sea ice in Antarctica [1989, pol] **F-54357**
Environment-krill relations in the South Georgia marine ecosystem [1996, eng] **B-56097**
Environmental conditions and krill aggregated distribution [1989, chi] **B-55730**
Euphausiid larvae in the Antarctic Circumpolar Current-Weddell Sea Confluence Zone in winter [1992, rus] **B-55467**
Euphausiid larvae in the eastern Weddell Gyre [1992, rus] **B-55466**
Euphausiid larvae in the Pacific sector of the Antarctic, 1992 [1995, eng] **B-56193**
Fresh- and salt-water Rotifers and Crustaceans of Antarctica [1993,] **B-56036**
Indian Ocean zooplankton biochemistry [1995, eng] **B-55971**
Krill biomass variations in West Antarctica, 1981-1989 [1993, eng] **B-54137**
Krill distribution and abundance near Elephant I., summer 1993-1994 [1994, eng] **A-54695**
Krill larvae in waters northwest of the Antarctic Peninsula [1989, chi] **B-55726**
Krill stock structure and macrozooplankton abundance near Elephant I., Jan.-Mar. 1994 [1994, eng] **B-54696**
Krill—the ecology of aggregation [1994, eng] **B-54384**
Life cycle of *Paralabidocera antarctica* at Showa Station [1996, eng] **B-55596**
Life cycles of Weddell Sea copepods [1995, eng] **B-54125**
Life strategies of a Bellingshausen Sea copepod [1996, ger] **B-56131**
Model of penguin foraging demands and krill fishery overlap near the South Shetland Is. [1995, eng] **B-54432**
Observations of antarctic sea birds during the summer of 1984-1985 [1989, chi] **B-55761**
Phytoplankton, chlorophyll-*a* and krill distribution in waters northwest of the Antarctic Peninsula [1989, chi] **B-55731**
School searching and echo sounder image analysis of krill (*Euphausia superba*) [1989, chi] **B-55742**
South Georgia Islands acoustic targets during seasonal krill scarcity [1996, eng] **B-55795**
Spatial distribution of krill during the "Antártida 86 11" expedition [1990, spa] **A-55239**
Subantarctic copepods in a low chlorophyll marine environment [1996, eng] **B-54648**
Summer plankton beneath the McMurdo Ice Shelf at White I. [1996, eng] **B-54464**
Surface water circulation in krill fishing areas near the South Shetland Islands [1996, eng] **J-56104**
Two dominant antarctic copepod distribution and population dynamics in different water masses during summer [1996, eng] **B-56188**
Vertical distribution seasonal changes in the *Metridia gerlachei* population, Croker Passage [1993, eng] **B-54143**

TAXONOMY
Amphipod fauna of the South Shetlands and Bransfield Strait [1995, eng] **B-56190**
Amphipod faunal diversity in two polar fjords: Admiralty Bay and Hornsund [1995, eng] **B-56191**
Antarctic benthic ostracods 3: from South Orkney Is. [1988, ger] **B-55490**

Antarctic benthic ostracods 4: from South Georgia [1989, ger] B-55494
Antarctic benthic ostracods 11. Part 2: Elephant I. and Bransfield Strait [1987, ger] B-55485
Antarctic benthic ostracods. 10. [1994, ger] B-55501
Antarctic species of the genus *Munna* Krøyer, 1839 [1994, eng] B-56052
Antatelson tuberculatum, new species of Thaumatelson from Antarctica [1989, ger] B-55493
Benthic ostracods from Elephant I. and the Antarctic Peninsula [1989, ger] B-55495
Cirripedia (Crustacea) in waters northwest of the Antarctic Peninsula [1989, chi] B-55733
Copepoda from the water area northwest of the Antarctic Peninsula [1989, chi] B-55734
Cumacea (Crustacea, Malacostraca) of Admiralty Bay [1995, eng] B-55577
Deep-sea shrimp from the Antarctic [1996, eng] B-55456
Fossil homolodromiid crab from King George I. [1995, chi] E-54595
Laophontidae n.sp.(Copepoda: Harpacticoida) from the Weddell Sea [1996, eng] B-55984
Latest Paleocene crisis in the deep sea: ostracode succession at Maud Rise, southern ocean [1996, eng] J-55504
Magellanic valvifera [1995, eng] B-55400
New *Echiniphimedia* species from Antarctica [1988, ger] B-55489
New species of *Donsiella* (Copepoda: Harpacticoida) from Macquarie I. [1990, eng] B-55064
Notes on *Oradarea* n.sp. and other eusirids [1995, eng] B-55612
Pliocene Ostracoda from the *Pecten* Conglomerate of Cockburn I. [1996, eng] E-55913
Systemic status of a copepod parasite of antarctic teleosts [1996, eng] B-55455
Taxonomy of a new antarctic crustacean [1996, eng] B-56330
Two new acanthonotozomatids from the Bransfield Strait [1988, ger] B-55488

Arthropoda—Insecta

BREEDING CYCLES AND REPRODUCTION
Tardigrades from the northern Prince Charles Mountains [1996, eng] B-56247

ECOLOGY
Antarctic Diptera: ecology, physiology and distribution [1996, eng] B-55778
Insects and freezing [1995, eng] B-54789
Tardigrades from the northern Prince Charles Mountains [1996, eng] B-56247
Tardigrades from Windmill Is. [1996, eng] B-55163

EMBRYOLOGY
Kelp degradation by *Paractora trichosterna* (Thomson) at South Georgia [1996, eng] B-54727

GEOGRAPHIC DISTRIBUTION
Antarctic Diptera: ecology, physiology and distribution [1996, eng] B-55778
Genus *Aridius* Motschulsky from subantarctic islands [1995, eng] B-54411
Oribatid mites from the Falkland Is. [1995, eng] B-54056
Oribatid mites of South Georgia [1995, eng] B-54057
Redescription of *Hypsibius antarcticus* and some notes on *H. arcticus* [1991, eng] B-55497
Tardigrades from the northern Prince Charles Mountains [1996, eng] B-56247
Terrestrial arthropod fauna of the Byers Peninsula: Collembola [1996, eng] B-55188

MORPHOLOGY
Freshwater tardigrades from Signy I. [1995, eng] B-54055
Genus *Aridius* Motschulsky from subantarctic islands [1995, eng] B-54411
New species of tardigrade from the Antarctic [1994, eng] B-54386
Oribatid mites from the Falkland Is. [1995, eng] B-54056
Oribatid mites of South Georgia [1995, eng] B-54057
Redescription of *Hypsibius antarcticus* and some notes on *H. arcticus* [1991, eng] B-55497

NUTRITION
Gut contents of *Gomphiocephalus hodgsoni* Carpenter at Cape Geology [1996, eng] B-55958
Kelp degradation by *Paractora trichosterna* (Thomson) at South Georgia [1996, eng] B-54727

PHYSIOLOGY
Antarctic Diptera: ecology, physiology and distribution [1996, eng] B-55778
Antioxidant enzymes in larvae of the antarctic fly, *Belgica antarctica* [1996, eng] B-55537
Insects and freezing [1995, eng] B-54789
Kelp degradation by *Paractora trichosterna* (Thomson) at South Georgia [1996, eng] B-54727
Supercooling in a subantarctic fly [1996, eng] B-55413

POPULATION
Distribution patterns of microfauna on Queen Maud Land nunataks [1996, eng] B-54728
Terrestrial arthropod fauna of the Byers Peninsula: Collembola [1996, eng] B-55188

TAXONOMY
Freshwater tardigrades from Signy I. [1995, eng] B-54055
Genus *Aridius* Motschulsky from subantarctic islands [1995, eng] B-54411
New species of tardigrade from the Antarctic [1994, eng] B-54386
Oribatid mites from the Falkland Is. [1995, eng] B-54056
Oribatid mites of South Georgia [1995, eng] B-54057
Redescription of *Hypsibius antarcticus* and some notes on *H. arcticus* [1991, eng] B-55497
Terrestrial arthropod fauna of the Byers Peninsula: Collembola [1996, eng] B-55188

Longwave atmospheric radiation over Antarctica [1996, eng] **I-54559**
Low-level atmospheric jets over the western Weddell Sea [1995, eng] **I-56234**
Mean summer windfield in the area of Elephant I. [1994, eng] **I-54704**
Measurements and parameter estimation of clear air and sea echoes in MST radars [1995, eng] **I-55074**
Mesoscale atmospheric circulations over the southwestern Ross Sea sector, Antarctica [1996, eng] **I-56140**
Mesoscale cyclonic activity near McMurdo Station [1994, eng] **I-54852**
Mesospheric and thermospheric UARS wind data [1996, eng] **K-56169**
Meteorological conditions of the antarctic ozone hole [1990, spa] **I-55251**
Micrometeorological phenomena on Deception I. [1990, spa] **I-55253**
Mineral aerosols at Amsterdam I. and dry deposition in the Indian Ocean [1995, fre] **I-55803**
Modeling and observational study of East Antarctic surface mass balance [1996, eng] **I-54400**
Modeling katabatic winds over West Antarctica [1995, eng] **I-56236**
Modeling of the coupled katabatic/ocean and ice systems of the Antarctic [1995, eng] **I-56228**
Modeling the coupled ocean—katabatic wind systems of the Antarctic [1994, eng] **I-54849**
Modification of the ozone layer by human activities in polar regions [1994, spa] **I-55779**
Monthly mean winds in the mesosphere at 44S and 78S [1989, eng] **I-55619**
Near-surface vorticity, convergence and synoptic depression tracks over the Bellingshausen Sea [1994, eng] **I-54376**
Northern and southern stratospheres compared [1996, eng] **K-56167**
Observational studies of the role of polar regions in mid-latitude ozone loss [1995, eng] **I-54417**
Observational study of the katabatic wind confluence zone near Siple Coast, West Antarctica [1996, eng] **I-54807**
Observational study of the springtime Siple Coast confluence zone [1995, eng] **I-56237**
Observations and model studies of episodic events over the south polar plateau [1994, eng] **I-55126**
Ocean circulation variations associated with the Antarctic Circumpolar Wave [1996, eng] **J-56020**
Ozone and NO_2 observations within the antarctic polar vortex [1990, spa] **I-55250**
Ozone in northern Europe and in Antarctica, 1987-1990 [1992, eng] **I-55192**
Planetary waves in total ozone and their relation to antarctic ozone depletion [1995, eng] **I-54975**
Polar cyclonic activity and snowfall at McMurdo Station [1995, eng] **I-56232**
Preliminary analysis of the cyclone activity over the Antarctic Peninsula in summer [1989, chi] **I-55712**
Relationship between atmospheric circulation and antarctic ozone depletion [1996, eng] **I-54758**
Satellite investigation of spring cloud cover in West Antarctica [1994, eng] **I-54850**
Sea-air exchange of sulfur, phosphorus, and nitrogen in marine aerosols over the Antarctic Peninsula waters [1989, chi] **I-55724**
Semiannual cycle and sea ice extent in the southern ocean [1995, eng] **F-56227**
Simulated antarctic mesoscale processes and climate [1995, eng] **I-56230**
Solar irradiance, air pollution and temperature changes in the Arctic [1995, eng] **I-55154**
Solitary wave-turbulence interaction [1995, eng] **I-54669**
Sources and distribution of sulfate in the Pacific atmosphere [1989, chi] **I-55760**
South Pacific tropospheric circulation variations, 1986-89 [1996, eng] **I-56022**

Southern hemisphere climate system recovery from 'instantaneous' sea-ice removal [1996, eng] I-56194
Split jet evolution over the South Pacific Ocean during the 1986-1989 ENSO cycle [1995, eng] I-56233
Stratospheric aerosols from the Pinatubo eruption in antarctic ice cores [1995, eng] I-56213
Stratospheric meteorological conditions for the 3-12 Nov 1994 ATMOS/ATLAS-3 measurements [1996, eng] I-56014
Stratospheric polar vortex and sub-vortex: fluid dynamics and midlatitude ozone loss [1995, eng] I-55153
Stratospheric Rossby wave phase speeds, pt.1 [1996, eng] I-54973
Sudden cessation of katabatic winds in Adélie Land, Antarctica [1996, eng] I-56141
Sulfur hexafluoride—a powerful new atmospheric tracer [1996, eng] I-55304
Super seeing from the Australian Antarctic Territory? [1992, eng] K-54226
Surface fluxes and aerial measurements in antarctic climate studies [1995, ita] I-54774
Temperature inversion strength on the south polar plateau [1995, eng] I-56224
Temporal structure of surface weather parameters at Casey, Davis, Mawson and Macquarie Island [1993, eng] I-56138
Temporal variability of precipitation over the western Antarctic Peninsula [1995, eng] I-56226
Tracer descent in the antarctic vortex, Nov. 1994 [1996, eng] I-56011
Troposphere and atmospheric boundary layer variability over the South Pole, 1993 [1994, eng] I-54853
Turbulent exchange in the surface layer over antarctic snow and ice [1996, eng] I-55830
U.S. FROST: Data and Science Plan. Report from the U.S. Science FROST Workshop, 2 and 3 August 1993 [1993, eng] I-54442
Volatile organic matter adsorbed on Tenax GR [1995, eng] I-54923
Wind and thermohaline circulations and the ACC [1996, eng] J-55931
Wintertime polar low over the eastern Weddell Sea [1996, eng] I-54643
XX Polar Symposium. Man impact on polar environment [1993, eng] A-54134

CURRENTS
Acoustic sounder measurements of the planetary boundary layer at Maitri, Antarctica [1995, eng] I-54820
Antarctic polar vortex analysis [1996, eng] I-55799
GCM response to an antarctic polynya [1995, eng] I-54419
Radar measurements of South Pole wind variations [1996, eng] I-56209
Spectroscopy of antarctic stratospheric ozone variations, pt.2 [1996, eng] I-54906

DENSITY
^{13}CO deficit in antarctic ozone hole chemistry, pt.1 [1996, eng] I-55994
^{13}CO deficit in antarctic ozone hole chemistry, pt.2 [1996, eng] I-55995
Arctic and antarctic ozone depletion inferred from radiometric soundings [1996, eng] I-55351
Astronomical seeing estimation in Antarctica [1996, eng] K-55765
Atmospheric aerosol turbidity over polar regions [1995, eng] I-55582
Bromine-chlorine coupling in the antarctic ozone hole [1996, eng] I-54406
Bursts of cloud condensation nuclei (CCN) by dissipating clouds at Palmer Station, Antarctica [1996, eng] I-54562
Chlorine monoxide in the antarctic spring vortex, pt.2 [1996, eng] I-54401
Decadal evolution of the antarctic ozone hole [1996, eng] I-55168
Denitrification mechanisms in the polar stratospheres [1990, eng] I-55439
Development of the antarctic ozone hole [1996, eng] I-56060
Distributions of volcanic aerosols in antarctic polar stratospheric clouds [1995, eng] I-54349
Effect of volcanic aerosols on ultraviolet radiation in Antarctica [1996, eng] I-54407
Equilibrium constant for the reaction of ClO + O_2 <-> ClO.O_2 [1990, eng] I-55031
Frozen clouds accelerate ozone destruction [1996, eng] I-56317
Ground-based aerosol measurements at Arrival Heights, Antarctica [1996, eng] I-55697
Interaction between atmospheric thermal tides and ozone anomalies [1996, eng] I-55840
Ionisation and solvation of stratospherically relevant molecules on ice films [1995, eng] I-55437
McMurdo, Antarctica atmospheric aerosol measurements, 1994 [1996, eng] I-56061
Measurements of total reactive nitrogen during the Airbome Arctic Stratospheric Expedition [1990, eng] I-55441
Meteor-3/TOMS observations of the 1994 ozone hole [1995, eng] I-54415
Nov. 1995 antarctic stratospheric dehydration [1996, eng] I-56013
Numerical modeling of heterogeneous ozone depletion in polar stratospheric clouds [1994, eng] I-54127
Observation of a new absorption band of HOBr and its atmospheric implications [1996, eng] I-54759
Ozone hole [1996, eng] I-55089
Ozone layer concentration over the Weddell Sea [1995, eng] I-55584
Potential for mid-infrared astronomy from Antarctica [1992, eng] K-54228
Pressure dependence of the reaction between ClO and OClO at 226K [1990, eng] I-55032
Reaction probabilities of $ClONO_2$ and N_2O_5 on polar stratospheric cloud materials [1991, eng] I-54587
Reduction of weather effects in the calculation for sea-ice concentration with the DMSP SSM/I [1995, eng] F-54066
Simulated effects of dichlorine hexoxide on stratospheric ozone depletion [1995, eng] I-54118
Sounding of polar stratospheric ozone structure [1996, eng] I-56010
Space data from scientific projects [1991, eng] I-54791
Spectroscopy of antarctic stratospheric ozone variations, pt.2 [1996, eng] I-54906
Stratospheric ozone depletion [1993, eng] I-55812
Upper Atmosphere Research Satellite (UARS) Microwave Limb Sounder (MLS) experiment [1992, eng] I-54546
Validation of NOAA-9 SBUV/2 total ozone measurements during the 1994 antarctic ozone hole [1996, eng] I-56023
Volcanic perturbation of the atmosphere in both polar regions: 1991-1994 [1996, eng] I-54486

ELECTRICITY
Geoelectric field at Davis station, Antarctica [1995, eng] K-54120
Global thunderstorm tracking via measurements of radio atmospherics at Palmer Station [1994, eng] K-55124
Ground based electric field measurements at Davis Station, Antarctica [1992, eng] K-54218
Ground-based optical observations of daytime auroral emissions from Antarctica [1995, eng] K-54116
Ionospheric Trimpi events recorded at Kerguelen [1996, eng] K-55523
Numerical simulation of whistler-triggered VLF emissions observed in Antarctica [1996, eng] K-54488
Relation of gamma-ray bursts to lighting [1996, eng] K-55218
Relationship between the θ-aurora and ULF emissions at high latitudes [1993, rus] K-54956
VLF waves in the magnetosphere [1995, eng] K-55040

OPTICAL PHENOMENA
Atmospheric transparency and the stress of direct solar radiation in the Arctic and Antarctic [1989, pol] I-54364
Automated DIMM telescope for Antarctica [1996, eng] K-55182
Hartmann Differential Image Motion Monitor (H-DIMM) for atmospheric turbulence characterisation [1996, eng] K-55177
Instrument devoted to the study of mm/sub-mm galactic emission at Dome C [1996, eng] K-55183
Light dispersion and horizontal transparency in the surface boundary layer of the polar regions [1993, rus] I-54958
POST: a polar stratospheric telescope for the Antarctic [1996, eng] K-55184
Potential for mid-infrared astronomy from Antarctica [1992, eng] K-54228
Potential of near-infrared astronomy in Antarctica [1992, eng] K-54227
Relationship between the θ-aurora and ULF emissions at high latitudes [1993, rus] K-54956
Super seeing from the Australian Antarctic Territory? [1992, eng] K-54226

POLLUTION
Acidic gases: a review of ice core data and their air-snow relationships [1996, eng] F-55821
Aerosol composition at the Great Wall Station [1989, eng] I-55519
Analysis of DDT, DDE and PCBs in the blood of *Pygoscelis* of Antarctica [1989, chi] B-55725
Antarctic polar vortex analysis [1996, eng] I-55799
Arctic and antarctic ozone depletion inferred from radiometric soundings [1996, eng] I-55351
Atmospheric aerosol turbidity over polar regions [1995, eng] I-55582
Atmospheric composition in polar regions [1994, eng] I-55871
Atmospheric NO_2 measurements using NO_2 filter badge and tube [1995, eng] I-54922
Atmospheric ozone—an update [1990, eng] I-55835
Atmospheric sulfur and hydroxyl radical measurements at Palmer Station [1994, eng] I-54857
Behavior of mercury in seawater to the northwest of the Antarctic Peninsula [1989, chi] J-55723

Bromine-chlorine coupling in the antarctic ozone hole [1996, eng] I-54406
Carbonyl sulfide concentrations in the surface waters and above the Indian Ocean [1989, eng] J-55853
Cement dust contamination and recovery of *Ceratodon purpureus* at Casey Station [1994, eng] B-54268
Central Antarctica: atmospheric chemical composition and atmospheric transport [1996, eng] I-55823
Changes in trace gas concentrations during the last 2000 years [1996, eng] I-55919
Characterization of antarctic aerosol particles using laser microbe mass spectrometry [1996, eng] I-55330
Chemical exchange between the atmosphere and polar snow [1996, eng] F-55819
Chlorine deactivation in low stratospheric polar regions [1996, eng] I-55798
Chlorine monoxide in the antarctic spring vortex, pt.2 [1996, eng] I-54401
Coastal Antarctica: atmospheric chemical composition and atmospheric transport [1996, eng] I-55824
Decadal evolution of the antarctic ozone hole [1996, eng] I-55168
Development of the antarctic ozone hole [1996, eng] I-56060
Dynamical influences on the antarctic ozone hole [1996, eng] I-55693
First results of ^{15}N/^{14}N ratios in nitrate from alpine and polar ice cores [1996, eng] F-54646
Global progress on problems of ozone depletion [1993, eng] I-55987
HCl molecules and ice interaction in polar stratosphere [1995, eng] I-56176
Ice core carbon monoxide data of Greenland and Antarctica atmospheres [1996, eng] I-56007
Interactions between greenhouse gases and climate over the last climatic cycle [1989, eng] I-55852
Kinetic measurements of the $ClO + O_3 \rightarrow ClOO + O_2$ reaction [1990, eng] I-55028
Mending the ozone hole: science, technology, and policy [1995, eng] I-54232
Meteorological data at Showa Station, 1994 [1995, eng] I-54269
Mineral aerosols at Amsterdam I. and dry deposition in the Indian Ocean [1995, fre] I-55803
Modification of the ozone layer by human activities in polar regions [1994, spa] I-55779
Monitoring of polychlorinated dibenzo-p-dioxins and dibenzofurans at McMurdo Station [1996, eng] I-55331
Ozone diplomacy: new directions in safeguarding the planet [1991, eng] A-55024
Ozone hole [1996, eng] I-55089
Ozone layer: the road not taken [1996, eng] I-55122
Ozone saga, the GOME experiment and the Nobel story... [1996, eng] I-56312
Polar stratospheric clouds at Zhongshan Station [1995, eng] I-54571
Record of aerosol deposited species in ice cores, and problems of interpretation [1996, eng] F-55820
Results of monitoring for PCDDs and PCDFs in ambient air at McMurdo Station, Antarctica [1993, eng] I-54738
Results of PM_{10} and TSP monitoring at McMurdo Station, Antarctica [1993, eng] I-54739
Results of SO_2, NO_x, and CO monitoring at McMurdo Station, Antarctica [1993, eng] I-54740
Solar irradiance, air pollution and temperature changes in the Arctic [1995, eng] I-55154
Sources and distribution of sulfate in the Pacific atmosphere [1989, chi] I-55760
Stratospheric ozone depletion [1993, eng] I-55812
Sulfur hexafluoride—a powerful new atmospheric tracer [1996, eng] I-55304
Volcanic record in ice cores for the past 2000 years [1996, eng] F-55918

PRESSURE

Annual variations in the meteorological parameters at Jinnah Station, Antarctica [1995, eng] I-54573
Antarctic Circumpolar Current as a waveguide for Rossby waves [1996, eng] J-55684
Antarctic circumpolar wave in surface pressure, wind, temperature and sea-ice extent [1996, eng] I-54822
Atmospheric and oceanic forcing of Weddell Sea ice motion [1996, eng] F-56045
Atmospheric boundary layer dynamics near Ross Island and over West Antarctica [1995, eng] I-56337
Atmospheric surface pressure over the interior of Antarctica [1996, eng] I-55321
Barotropic model of the Antarctic Circumpolar Current [1996, eng] J-55996
Case analysis of antarctic strong cyclone process [1989, chi] I-55713
Climate at Dumont d'Urville and in Antarctica [1996, fre] I-55425
Correction to paper by K.D. Beyer et al [1996, eng] I-56025
Cycling around the South Pole [1996, eng] I-54821
Intense mesoscale cyclone over southern Marie Byrd Land [1995, eng] I-56231
Interannual variations in antarctic precipitation related to El Niño-Southern Oscillation [1996, eng] I-55952
Intercomparison of simulated polar climates by global climate models [1995, eng] I-56240
June 2, 1993 storm at McMurdo Station [1994, eng] I-54846
LARC cosmic ray detector on King George I. [1995, eng] K-54981
Large-scale surface pressure changes over Antarctica [1994, eng] I-54848
Meteorological observations at Showa Station by JARE-33 in 1992 [1995, jpn] I-54999
Micrometeorological phenomena on Deception I. [1990, spa] I-55253
Near-surface vorticity, convergence and synoptic depression tracks over the Bellingshausen Sea [1994, eng] I-54376
Northern and southern stratospheres compared [1996, eng] K-56167
Observational study of the springtime Siple Coast confluence zone [1995, eng] I-56237
On the relationship between extra-terrestrial radiation and surface pressure [1996, eng] I-55604
Overview of UARS ozone validation measurements [1996, eng] K-56168
Recent climate variability in the vicinity of the Antarctic Peninsula [1994, eng] I-54392
Simulated antarctic mesoscale processes and climate [1995, eng] I-56230
South Pacific tropospheric circulation variations, 1986-89 [1996, eng] I-56022
Southern Hemisphere climate: comparing models with reality [1996, eng] I-55355
Split jet evolution over the South Pacific Ocean during the 1986-1989 ENSO cycle [1995, eng] I-56233
Study of the surface circulation to the north of Bransfield Strait, Antarctica [1992, spa] J-55694
Sudden cessation of katabatic winds in Adélie Land, Antarctica [1996, eng] I-56141
Temporal structure of surface weather parameters at Casey, Davis, Mawson and Macquarie Island [1993, eng] I-56138
Temporal variability of precipitation over the western Antarctic Peninsula [1995, eng] I-56226
Validation of HALOE water vapor measurements [1996, eng] K-56165
Wintertime polar low over the eastern Weddell Sea [1996, eng] I-54643

RADIATION

See: Radiation/Atmospheric

STRUCTURE

Acoustic sounder measurements of the planetary boundary layer at Maitri, Antarctica [1995, eng] I-54820
Antarctic atmospheric moisture values obtained from microwave radiometers [1992, eng] I-54547
Antarctic stratospheric aerosol partitioning, Nov. 1994 [1996, eng] I-56012
Atmospheric boundary layer over Neumayer Station [1996, ger] I-55978
Atmospheric vertical temperature structure [1996, eng] I-56207
Decadal change in the troposphere and atmospheric boundary layer over the South Pole [1994, eng] I-54854
Distributions of volcanic aerosols in antarctic polar stratospheric clouds [1995, eng] I-54349
First results from the meteor radar at South Pole [1995, eng] I-54416
High relative humidity values measured in the antarctic stratosphere [1990, spa] I-55252
Low-frequency radio emission variation in the antarctic magnetosphere [1996, eng] K-54345
McMurdo, Antarctica atmospheric aerosol measurements, 1994 [1996, eng] I-56061
Meteor-3/TOMS observations of the 1994 ozone hole [1995, eng] I-54415
Our changing atmosphere [1989, eng] I-55845
Polar measurements of atmospheric continuum microwave emission [1994, eng] K-55130
Relationship between atmospheric circulation and antarctic ozone depletion [1996, eng] I-54758
Southern Hemisphere 500mb anomalies [1994, eng] I-56029
Spectromery of auroral boundary above Mawson, Antarctica [1996, eng] K-55434
Stratospheric meteorological conditions for the 3-12 Nov 1994 ATMOS/ATLAS-3 measurements [1996, eng] I-56014
Stratospheric Rossby wave phase speeds, pt.1 [1996, eng] I-54973
Volcanic ash variations in the antarctic stratosphere [1996, eng] I-55305

Why Antarctica? [1996, eng] K-55172
TEMPERATURE
Ablation rates under the Ekström Ice Shelf deduced from different methods [1995, eng] F-56072
Air temperature variability in eastern Alexander I. [1994, eng] I-54377
Annual variations in the meteorological parameters at Jinnah Station, Antarctica [1995, eng] I-54573
Antarctic circumpolar wave in surface pressure, wind, temperature and sea-ice extent [1996, eng] I-54822
Antarctic EDM operations [1988, eng] C-55645
Antarctic inversion [1995, eng] I-56215
Antarctic Peninsula ice shelves retreat [1996, eng] I-54455
Antarctic regions surface air temperature anomalies [1994, eng] I-55801
Antarctic regions surface air temperature anomalies [1994, eng] I-56030
Antarctica [1996, eng] I-55086
Anti-greenhouse effect of cloud condensation nuclei at Palmer Station [1995, eng] I-56245
Atmospheric boundary layer over Neumayer Station [1996, ger] I-55978
Atmospheric composition and temperature model for glacial and interglacial periods [1995, eng] I-55967
Atmospheric heat budget seasonal variations in 1988 [1995, eng] I-54251
Atmospheric thermal radiation over the South Pole [1995, eng] I-55983
Atmospheric vertical temperature structure [1996, eng] I-56207
Automated DIMM telescope for Antarctica [1996, eng] K-55182
Behavior of the East Antarctic ice sheet as deduced from a coupled GCM/ice-sheet model [1995, eng] F-54974
Behavior of tropospheric and stratospheric ozone in The Arctic and Antarctica [1993, eng] I-55050
Bioclimatic conditions in the region of Arctowski Station during the summer period [1989, pol] I-54374
Case analysis of antarctic strong cyclone process [1989, chi] I-55713
Chemical evolution of the polar stratosphere: a status report [1995, eng] I-56241
Climate at Dumont d'Urville and in Antarctica [1996, fre] I-55425
Climate changes in Antarctica over the past 500 years from ice core evidence [1996, eng] F-55916
Climate monitor, Vol.22. [1995, eng] I-54451
Climate of the penultimate ice age according to data from an antarctic ice core [1993, rus] I-54795
Climate reconstruction from water isotopes [1996, eng] I-55915
Climatic data from Roberts Knoll, Jan. 1993-Jan. 1995 [1994, eng] I-54180
Climatic variations and forcing mechanisms of the last 2000 years [1996, eng] I-55914
Concurrent ozone and temperature trends derived from ozonesonde stations [1995, eng] I-54050
Cycling around the South Pole [1996, eng] I-54821
Decadal change in the troposphere and atmospheric boundary layer over the South Pole [1994, eng] I-54854
Doppler spectroscopy of antarctic wind velocities [1995, eng] I-54671
Double jets in a two-level PE model [1995, eng] I-56235
Earth's atmospheric record in ice cores [1995, eng] I-55097
East Antarctic Ice Sheet development during the Middle Miocene climatic transition from 16 to 12 Ma [1993, eng] F-56133
Electron concentration and meteorological parameters at Molodezhnaya [1995, eng] K-55767
Environment-krill relations in the South Georgia marine ecosystem [1996, eng] B-56097
Evolution of the boundary layer over the southern ocean [1994, eng] I-55065
Fluvial morphology and streamflow on Deception Island, Antarctica [1995, eng] E-54812
Freeze thaw effect on an antarctic moss [1995, eng] B-55100
Freezing temperatures of $H_2SO_4/HNO_3/H_2O$ mixtures: implications for PSC initiation [1995, eng] I-56244
Frozen clouds accelerate ozone destruction [1996, eng] I-56317
Glaciological investigations on the Foundation Ice Stream [1995, eng] F-56073
Global climate model with 1°-resolution sea ice and ocean components [1995, eng] F-56239
Hydrographic changes of the Indian Ocean over the last 230 kyr [1996, eng] J-54861
Ice shelf breakup [1996, eng] F-54492
Impact of Antarctica on surface air temperatures in the southern polar region [1993, rus] I-54957
In situ measurements of the surface temperature in the western Weddell Sea [1995, eng] I-56220
Infrared atmospheric absorption and emission studies [1994, eng] I-55127
Intense mesoscale cyclone over southern Marie Byrd Land [1995, eng] I-56231
Inter-annual variability in marine coastal antarctic bacterioplankton [1996, eng] B-54685
Interaction between atmospheric thermal tides and ozone anomalies [1996, eng] I-55840
Interaction between polar climate and global warming [1995, eng] I-56238
Interactions between greenhouse gases and climate over the last climatic cycle [1989, eng] I-55852
June 2, 1993 storm at McMurdo Station [1994, eng] I-54846
Lidar observations of stratospheric temperature above McMurdo Station, Antarctica [1996, eng] I-55303
Light dispersion and horizontal transparency in the surface boundary layer of the polar regions [1993, rus] I-54958
Limits of life and microbial extinction in the antarctic desert [1994, eng] B-54693
Listing of temperatures at Arctic and Antarctic stations [1994, eng] I-55800
Listing of temperatures at Arctic and Antarctic stations [1996, eng] I-56031
Longwave atmospheric radiation over Antarctica [1996, eng] I-54559
Low-level atmospheric jets over the western Weddell Sea [1995, eng] I-56234
Mean annual air temperature trends since 1904 in the South Shetland Islands [1995, chi] I-55307
Meteorological conditions of the antarctic ozone hole [1990, spa] I-55251
Meteorological observations at Showa Station by JARE-33 in 1992 [1995, jpn] I-54999
Micrometeorological phenomena on Deception I. [1990, spa] I-55253
Modeling katabatic winds over West Antarctica [1995, eng] I-56236
New formulation for the Bowen ratio over saturated surfaces [1996, eng] I-55659
Northern and southern stratospheres compared [1996, eng] K-56167
Observational study of the springtime Siple Coast confluence zone [1995, eng] I-56237
Observations and model studies of episodic events over the south polar plateau [1994, eng] I-55126
OH rotational temperatures at Davis, Antarctica, via scanning spectrometer [1996, eng] I-54644
Ozone and NO_2 observations within the antarctic polar vortex [1990, spa] I-55250
Past 100 year instrumental record and long-term paleoclimatic reconstruction [1996, eng] I-55920
Peroxide record from the DSS ice core, Law Dome, Antarctica: preliminary results [1996, eng] F-55834
Polar stratospheric clouds observed by lidar at McMurdo Station during the 1993 winter [1994, eng] I-54831
Possible influence of long-term SST-anomalies on the eddy ozone transport [1989, eng] I-55849
Preliminary analysis of the cyclone activity over the Antarctic Peninsula in summer [1989, chi] I-55712
Radiation at Showa and South Pole Stations [1995, eng] I-55414
Radiosonde temperature profiles at South Pole: correction for thermal lag [1995, eng] I-56216
Recent climate variability in the vicinity of the Antarctic Peninsula [1994, eng] I-54392
Record low ozone at McMurdo Station in spring of 1993 [1994, eng] I-54830
Response of pioneer soil microalgal colonists to environmental change in Antarctica [1996, eng] B-55010
Risk of sea level rise [1996, eng] I-55903

Aves

- Antarctic Conservation Act of 1978 [1989, eng] **M-55053**
- Biological survey of Vesleskarvet Cliff, Ahlmann Ridge [1994, eng] **B-54176**

BEHAVIOR

- Cephalopods as prey. I. Seabirds [1996, eng] **B-56091**
- Interaction between wandering albatrosses and longline fisheries at South Georgia [1996, eng] **A-56102**
- Seabird interaction with longlining operations for fish around South Georgia, 1994 [1995, eng] **B-54433**
- Seabird interaction with trawl and longline fisheries [1996, eng] **A-56101**
- Spatial and behavioral responses by foraging seabirds to antarctic krill swarms [1994, eng] **B-54290**

BREEDING CYCLES AND REPRODUCTION

- Biologic notes about Turret Point, King George Island, Antarctica [1990, eng] **B-55346**
- Bird distribution and abundance on Potter Peninsula [1995, eng] **B-54471**
- Birds of Thule I., South Sandwich Is. [1981, fre] **B-54397**
- Interaction between wandering albatrosses and longline fisheries at South Georgia [1996, eng] **A-56102**
- New records of bird breeding and distribution in the Ahlmann Ridge, 1991-1995 [1995, eng] **B-54473**

ECOLOGY

- Avifauna from the Weddell Sea, 1989-1990 [1993, spa] **B-54510**
- Bird distribution and abundance on Potter Peninsula [1995, eng] **B-54471**
- New psychrobracters from the Vestfold Hills [1996, eng] **B-56267**

GEOGRAPHIC DISTRIBUTION

- Antarctic fauna and some of its problems [1956, eng] **B-55481**
- Avifauna from the Weddell Sea, 1989-1990 [1993, spa] **B-54510**
- Bird distribution and abundance on Potter Peninsula [1995, eng] **B-54471**
- Birds of Thule I., South Sandwich Is. [1981, fre] **B-54397**
- Cetaceans, seals and seabirds observed near the Antarctic Peninsula [1990, spa] **B-55246**
- Distribution of surface zooplankton and seabirds across the southern ocean [1996, eng] **B-55189**
- New psychrobracters from the Vestfold Hills [1996, eng] **B-56267**
- New record of Cattle Egret, Blacknecked Swan, and Whiterumped Sandpiper from the South Shetland Is. [1995, eng] **B-54477**
- New records of bird breeding and distribution in the Ahlmann Ridge, 1991-1995 [1995, eng] **B-54473**
- Observations of antarctic sea birds during the summer of 1984-1985 [1989, chi] **B-55761**
- Vertebrate predators and their spatial association with krill [1994, eng] **B-54701**

NUTRITION

- Cephalopods as prey. I. Seabirds [1996, eng] **B-56091**
- Differences between krill caught by predators and by net [1996, eng] **B-56187**
- Effects of small-mammal trapping on birds at Marion I. [1994, eng] **B-54182**
- Observations of antarctic sea birds during the summer of 1984-1985 [1989, chi] **B-55761**
- Seabird and seal consumption of subantarctic marine resources and consumer biomass changes 1962-1985 [1996, eng] **B-54551**
- Spatial and behavioral responses by foraging seabirds to antarctic krill swarms [1994, eng] **B-54290**

PATHOLOGY

- Incidental mortality of seabirds in the Patagonian toothfish fishery around South Georgia in 1995 [1996, eng] **A-56100**
- Interaction between wandering albatrosses and longline fisheries at South Georgia [1996, eng] **A-56102**
- Seabird interaction with longlining operations for fish around South Georgia, 1994 [1995, eng] **B-54433**
- Seabird interaction with trawl and longline fisheries [1996, eng] **A-56101**

PHYSIOLOGY

- Adrenocortical responses to stress in antarctic seabirds [1994, eng] **B-54291**
- Spatial and behavioral responses by foraging seabirds to antarctic krill swarms [1994, eng] **B-54290**

POPULATION

- Avifauna from the Weddell Sea, 1989-1990 [1993, spa] **B-54510**
- Biologic notes about Turret Point, King George Island, Antarctica [1990, eng] **B-55346**
- Biological survey of the Davis Is. [1996, eng] **B-54321**
- Bird distribution and abundance on Potter Peninsula [1995, eng] **B-54471**
- Birds of Thule I., South Sandwich Is. [1981, fre] **B-54397**
- Breeding birds at Duthoit Point [1995, eng] **B-54476**
- Distribution of surface zooplankton and seabirds across the southern ocean [1996, eng] **B-55189**
- Fall birds and mammals in the Amundsen and Bellingshausen Seas [1994, eng] **B-54161**
- Incidental mortality of seabirds in the Patagonian toothfish fishery around South Georgia in 1995 [1996, eng] **A-56100**
- New records of bird breeding and distribution in the Ahlmann Ridge, 1991-1995 [1995, eng] **B-54473**
- Observations of antarctic sea birds during the summer of 1984-1985 [1989, chi] **B-55761**
- Observations on the avifauna of South Georgia [1993, spa] **B-54509**
- Seabird and seal consumption of subantarctic marine resources and consumer biomass changes 1962-1985 [1996, eng] **B-54551**
- Seabird interaction with longlining operations for fish around South Georgia, 1994 [1995, eng] **B-54433**
- Seabird interaction with trawl and longline fisheries [1996, eng] **A-56101**

TAXONOMY

- New psychrobracters from the Vestfold Hills [1996, eng] **B-56267**
- Observations on the avifauna of South Georgia [1993, spa] **B-54509**

Aves—Anseriformes

BEHAVIOR

- Sexual differences in the diet of king cormorants at Macquarie Island [1996, eng] **B-54690**

BREEDING CYCLES AND REPRODUCTION

- *Phalacrocorax atriceps carunculatus* nesting colony in Paradise Harbor [1990, spa] **B-55244**

EMBRYOLOGY

- *Phalacrocorax atriceps carunculatus* nesting colony in Paradise Harbor [1990, spa] **B-55244**

GEOGRAPHIC DISTRIBUTION

- Observation of 5 Blacknecked swans *Cygnus melanocoryphus* in West Antarctica [1990, spa] **B-55245**
- *Phalacrocorax atriceps carunculatus* nesting colony in Paradise Harbor [1990, spa] **B-55244**

MIGRATION

- Observation of 5 Blacknecked swans *Cygnus melanocoryphus* in West Antarctica [1990, spa] **B-55245**

MORPHOLOGY

- Sexual differences in the diet of king cormorants at Macquarie Island [1996, eng] **B-54690**

NUTRITION

- Sexual differences in the diet of king cormorants at Macquarie Island [1996, eng] **B-54690**

Aves—Charadriiformes

BEHAVIOR

- Lesser Sheathbill's life traits in contrasting habitats [1996, eng] **B-56198**
- Plants used in nest-building by gulls and terns on King George and Nelson islands [1990, eng] **B-55347**

BREEDING CYCLES AND REPRODUCTION

- Distribution, abundance and biology of the tern *Sterna vittata* from King George I. [1995, eng] **B-55484**
- Human influences on breeding of south polar skuas in Larsemann Hills [1996, eng] **B-54319**
- Lesser Sheathbill's life traits in contrasting habitats [1996, eng] **B-56198**
- Plants used in nest-building by gulls and terns on King George and Nelson islands [1990, eng] **B-55347**

ECOLOGY

- Dietary associations of the sheathbill *Chionis alba* from Potter Peninsula and Half Moon I. [1993, spa] **B-54507**
- Distribution, abundance and biology of the tern *Sterna vittata* from King George I. [1995, eng] **B-55484**
- Human influences on breeding of south polar skuas in Larsemann Hills [1996, eng] **B-54319**
- Lesser Sheathbill's life traits in contrasting habitats [1996, eng] **B-56198**
- Plants used in nest-building by gulls and terns on King George and Nelson islands [1990, eng] **B-55347**

EMBRYOLOGY

- Distribution, abundance and biology of the tern *Sterna vittata* from King George I. [1995, eng] **B-55484**

GEOGRAPHIC DISTRIBUTION

- Distribution, abundance and biology of the tern *Sterna vittata* from King George I. [1995, eng] **B-55484**

NUTRITION

- Dietary associations of the sheathbill *Chionis alba* from Potter Peninsula and Half Moon I. [1993, spa] **B-54507**
- Distribution, abundance and biology of the tern *Sterna vittata* from King George I. [1995, eng] **B-55484**
- Human influences on breeding of south polar skuas in Larsemann Hills [1996, eng] **B-54319**
- Lesser Sheathbill's life traits in contrasting habitats [1996, eng] **B-56198**

POPULATION

- Dietary associations of the sheathbill *Chionis alba* from Potter Peninsula and Half Moon I. [1993, spa] **B-54507**
- Distribution, abundance and biology of the tern *Sterna vittata* from King George I. [1995, eng] **B-55484**
- Human influences on breeding of south polar skuas in Larsemann Hills [1996, eng] **B-54319**

Aves—Procellariiformes

BEHAVIOR

- Antarctic procellariiform seabirds can smell krill [1994, eng] **B-54293**
- Egg variability and hatching success in the petrel *Daption capense* on Nelson I. [1996, eng] **B-55937**
- Energy expenditure of free-ranging black-browed albatrosses [1995, eng] **B-54186**
- Foraging behaviour and energetics of wandering albatrosses brooding chicks [1996, eng] **B-55592**
- Lévy flight search patterns of wandering albatrosses [1996, eng] **B-55624**
- Seabird mortality in Kerguelen waters [1996, eng] **B-54449**
- Use of seabirds to monitor sea-surface temperatures [1995, eng] **J-54200**
- Weather and cyclic patterns of colony attendance in Cape petrels [1996, eng] **B-55335**

BREEDING CYCLES AND REPRODUCTION

- Burrowing petrel breeding before and after the eradication of feral cats at Marion I. [1995, eng] **B-54472**
- Egg size, parental quality, and nestling growth [1996, eng] **B-56274**
- Egg variability and hatching success in the petrel *Daption capense* on Nelson I. [1996, eng] **B-55937**
- Food provisioning in the petrel *Thalassoica antarctica* [1996, eng] **B-55357**
- Foraging behaviour and energetics of wandering albatrosses brooding chicks [1996, eng] **B-55592**
- Foraging ecology and reproductive energetics of petrels [1994, eng] **B-54292**
- Oceanites begins Antarctic Site Inventory project [1996, eng] **B-55110**
- Petrel colony attendance at Nelson I., Antarctica [1996, eng] **B-54897**
- Weather and cyclic patterns of colony attendance in Cape petrels [1996, eng] **B-55335**
- Whitechinned petrel at Marion Island [1995, eng] **B-55623**
- Wilson's Storm Petrels breeding at the Bertrab Nunatak [1995, eng] **B-54478**

ECOLOGY

- Foraging ecology and reproductive energetics of petrels [1994, eng] **B-54292**
- Weather and cyclic patterns of colony attendance in Cape petrels [1996, eng] **B-55335**

EMBRYOLOGY

- Egg variability and hatching success in the petrel *Daption capense* on Nelson I. [1996, eng] **B-55937**

GEOGRAPHIC DISTRIBUTION

- Wilson's Storm Petrels breeding at the Bertrab Nunatak [1995, eng] **B-54478**

MARKING

- Cephalopods and mesoscale oceanography at the Antarctic Polar Front [1996, eng] **B-56184**
- Energy expenditure of free-ranging black-browed albatrosses [1995, eng] **B-54186**
- Implantable data logging system for estimation of metabolic rates in antarctic predators [1995, eng] **B-54410**
- Use of seabirds to monitor sea-surface temperatures [1995, eng] **J-54200**

MORPHOLOGY

- Whitechinned petrel at Marion Island [1995, eng] **B-55623**

NUTRITION

- Albatross' fish diet at South Georgia [1996, eng] **B-55959**
- Albatrosses feeding on squid as indicators of marine resources in Kerguelen waters [1995, eng] **B-54651**
- Antarctic procellariiform seabirds can smell krill [1994, eng] **B-54293**
- Cephalopods and mesoscale oceanography at the Antarctic Polar Front [1996, eng] **B-56184**
- Food provisioning in the petrel *Thalassoica antarctica* [1996, eng] **B-55357**
- Lévy flight search patterns of wandering albatrosses [1996, eng] **B-55624**
- Seabird mortality in Kerguelen waters [1996, eng] **B-54449**

PATHOLOGY

- Fishing hooks and albatrosses at Bird I., 1992-1993 [1995, eng] **B-54470**

PHYSIOLOGY

- Antarctic procellariiform seabirds can smell krill [1994, eng] **B-54293**
- Energy expenditure of free-ranging black-browed albatrosses [1995, eng] **B-54186**
- Food provisioning in the petrel *Thalassoica antarctica* [1996, eng] **B-55357**
- Foraging behaviour and energetics of wandering albatrosses brooding chicks [1996, eng] **B-55592**
- Foraging ecology and reproductive energetics of petrels [1994, eng] **B-54292**
- Implantable data logging system for estimation of metabolic rates in antarctic predators [1995, eng] **B-54410**
- Radiocarbon-dated subfossil stomach oil deposits from petrel nesting sites [1995, eng] **E-55165**

POPULATION

- Burrowing petrel breeding before and after the eradication of feral cats at Marion I. [1995, eng] **B-54472**
- Concurrent decreases in five species of southern ocean seabirds in Prydz Bay [1996, eng] **B-55340**
- Petrel colony attendance at Nelson I., Antarctica [1996, eng] **B-54897**
- Seabird mortality in Kerguelen waters [1996, eng] **B-54449**
- Wilson's Storm Petrels breeding at the Bertrab Nunatak [1995, eng] **B-54478**

Aves—Sphenisciformes

- Pesticide pollution at Dakshin Gangotri [1996, eng] **J-55787**
- Pinnipeds and seabirds at South Shetland Is., summer 1993-1994 [1994, eng] **B-54702**

BEHAVIOR

- Acoustic form of chinstrap penguin krill prey field [1996, eng] **B-54808**
- Adoption in emperor penguins [1995, eng] **B-55229**
- Chinstrap penguin nest defence and offspring number and age [1996, eng] **B-56295**
- Diurnal changes of penguin population in Admiralty Bay [1987, eng] **B-56263**
- Diving behavior of Gentoo penguins [1996, eng] **B-55886**
- Effects of Royal Penguins colony location on breeding success [1996, eng] **B-55790**
- Emperors of the ice [1996, eng] **B-56180**
- Gentoo Penguin foraging ecology at Macquarie Island [1996, eng] **B-56016**
- Mate switching and copulation behaviour in the Adélie penguin [1995, eng] **B-55378**
- Metabolism of breeding chinstrap penguins [1996, eng] **B-55103**

Natural history of emperor penguin colonies of the Ross Sea, 1993 [1994, eng] B-54294
Parent-offspring interactions and feeding chases in the Chinstrap penguin *Pygoscelis antarctica* [1996, eng] B-56199
Penguin dispersal after fledging [1996, eng] B-56270
Sea ice and ecology of Adèlie penguins [1996, jpn] B-56339
Sperm transfer in the Adèlie penguin [1996, eng] B-55385
Unfit mothers? Maternal infanticide in royal penguins [1995, eng] B-56261

BLOOD AND CIRCULATION
Analysis of DDT, DDE and PCBs in the blood of *Pygoscelis* of Antarctica [1989, chi] B-55725
Core temperature variability in diving penguins [1996, eng] B-55339
Detection of avian malaria infections in wild and captive penguins [1995, eng] B-54191

BREEDING CYCLES AND REPRODUCTION
Adoption in emperor penguins [1995, eng] B-55229
Chinstrap penguin nest defence and offspring number and age [1996, eng] B-56295
Diurnal changes of penguin population in Admiralty Bay [1987, eng] B-56263
Effect of investigators on breeding success of penguins at Macquarie I. [1996, eng] B-55334
Effects of flipper bands on Royal Penguin adult survival rate [1996, eng] B-55542

Biochemistry
- Activity of lanternfish proteases and lipase [1986, rus] **B-56320**
- Adrenocortical responses to stress in antarctic seabirds [1994, eng] **B-54291**
- Advanced life support testbed development at Amundsen-Scott Station [1994, eng] **G-55382**
- Advection of suspended sediment in the Ross Sea [1994, eng] **J-54156**
- Alkane and aromatic hydrocarbons in sea sediments near the antarctic Peninsula [1989, chi] **E-55717**
- Analysis of DDT, DDE and PCBs in the blood of *Pygoscelis* of Antarctica [1989, chi] **B-55725**
- Antarctic diatom nitrate exhaustion and mortality [1996, eng] **B-55411**
- Antarctic fish retina. Histological variations under continuous darkness [1990, eng] **B-55343**
- Antarctic krill chitosan as a curative agent in vetmed [1992, eng] **B-54461**
- Antarctic krill enzyme physiology [1996, eng] **B-55410**
- Antarctic krill *Thysanoessa macrura* fills a major gap in marine lipogenic pathways [1996, eng] **B-55283**
- Antarctic phytoplankton and DNA library from communities exposed to ultraviolet-B [1994, eng] **B-54843**
- Antifreeze glycopeptides and peptides in fish from the Weddell and Lazarev seas [1996, eng] **B-54647**
- Antimicrobial activity of a new monoterpene from the Antarctic Peninsula [1990, spa] **B-55248**
- Antimicrobial activity of antarctic lichens [1919, por] **B-56206**

Antioxidant enzymes in larvae of the antarctic fly, *Belgica antarctica* [1996, eng] **B-55537**
β-lactamase secreted by the Antarctic psychrophile *Psychrobacter immobilis* A8 [1995, eng] **B-54652**
Bacillus thermoantarcticus n.sp., Mount Melbourne [1996, eng] **B-54466**
Bacterial number and biomass in the antarctic waters [1989, chi] **B-55735**
Bacterial production in antarctic soils [1996, eng] **B-54605**
Bacterium from Palmer Peninsula waters [1996, eng] **B-55925**
Baseline heavy metal concentrations in clams from Maxwell Bay [1996, eng] **B-56300**
Biochemical aspects of the readaptation of an organism after a period spent in Antarctica [1993,] **B-56038**
Biochemical composition and inorganic elements of krill [1989, chi] **B-55740**
Biochemistry of a psychrophilic alga [1996, eng] **B-55651**
Biogenic organic compounds in ponds on the McMurdo Ice Shelf [1996, eng] **B-54554**
Biogeochemistry of lake sediments near Showa Station [1993, eng] **E-54992**
Biological CO_2 pump in seasonally ice-covered waters [1996, eng] **B-55449**
Body composition changes in elephant seal mothers [1996, eng] **B-55776**
Body composition of antarctic fur seals [1996, eng] **B-54261**
Body condition and composition in female antarctic fur seals [1995, eng] **B-54201**
Bryophyte propagule bank of Antarctic fellfield soils [1987, eng] **B-56201**
Carbon-13 in algal and sedimentary biomarkers from the Amundsen and Bellingshausen Seas [1994, eng] **J-54160**
Cement dust contamination and recovery of *Ceratodon purpureus* at Casey Station [1994, eng] **B-54268**
Changes in volatile organic bases during canning of krill [1986, rus] **B-56326**
Chemical constituents of four antarctic sponges in McMurdo Sound, Antarctica [1994, eng] **B-54284**
Chemical ecology of three antarctic gastropods [1994, eng] **B-54283**
Chlorophyll-*a* summer vertical distribution in Boeckella Lake [1996, eng] **B-55588**
Chromosome count in mosses from King George I. [1995, chi] **B-54585**
Chronology of Signy I. brachiopods [1996, eng] **B-55408**
Climate change in the recent evolution of a pro-glacial lake [1996, eng] **B-54555**
Cold adaptation in some antarctic fishes [1995, eng] **B-54784**
Cold adaptations of bacteria [1996, eng] **B-54604**
Construction of a diatom-based chlorophyll *a* transfer function and its application at three lakes on Signy I. [1995, eng] **B-54829**
Crystalline cones from eyes of *Euphausia superba* Dana [1994, eng] **B-55580**
Cytochrome b gene sequences and antifreeze gene structure in eelpouts from McMurdo Sound [1994, eng] **B-54287**
Decomposition of the macroalga *Desmarestia anceps* [1996, eng] **B-54468**
Detection of avian malaria infections in wild and captive penguins [1995, eng] **B-54191**
Detection of methylotrophs by amplification of the *moxF* gene fragment [1995, eng] **B-54741**
Detection of the ribulose bisphosphate carboxylase gene [1995, eng] **B-54742**
Determination of energetics and physiology of penguins and seals [1995, eng] **B-54892**
Diatom preservation comparison in oxic and anoxic basins [1995, eng] **B-55777**
Diatom stratigraphy in the sediments of Skua Lake [1994, eng] **E-56303**
Did Martians land in Antarctica [1996, eng] **E-55922**
Dimethyl sulfide analysis in *Phaeocystis pouchetii* from McMurdo Sound [1994, eng] **B-54155**
Discorhabdin alkaloids from the antarctic sponge *Latrunculia apicalis* [1995, eng] **B-54667**
Discovery of a novel R-phycoerythrin from an antarctic red alga [1996, eng] **B-56249**
Diurnal changes of penguin population in Admiralty Bay [1987, eng] **B-56263**
Diving development and survivorship in Weddell seal pups [1994, eng] **B-54295**
Downward fluxes of fatty acids and hydrocarbons in Breid Bay in summer [1996, eng] **B-56257**
Dynamic instability of microtubules from antarctic fishes [1994, eng] **B-54288**
Effects of water stress on antarctic green algae [1996, eng] **B-54972**
Egg production of *Calanus propinquus* in laboratory conditions [1992, rus] **B-55465**
EM of the fish tectum [1996, eng] **B-54785**
Endocrinology and the reproductive cycle in King penguins [1996, eng] **B-55367**
Energy metabolism in the sea urchin *Sterechinus neumayeri* [1994, eng] **B-54286**
Epilithic algae from a freshwater stream [1996, eng] **B-55316**
Epoxyfocardin and its biogenic precursors in the ciliate *Euplotes focardii* [1996, eng] **B-55482**
Fatty acid adaptation in an antarctic bacterium—changes in primer utilization [1996, eng] **B-55051**
Fatty acid-binding protein from antarctic icefish muscle [1995, eng] **B-54187**
Fish adaptation to different temperatures by changes in gene expression [1995, eng] **B-54193**
Fish antifreeze protein inhibition of liposome leakage [1996, eng] **B-55525**
Freshwater algae from Lake Gondwana [1995, eng] **B-54636**
Genetic diversity in an antarctic fungus [1995, eng] **B-55688**
Glyceryl ester and diterpenoic acid from the skin of antarctic nudibranchs [1995, eng] **B-54112**
Growth temperature preferences of fungal strains from Victoria Land, Antarctica [1996, eng] **B-54688**
Hemoglobin system in an antarctic teleost [1996, eng] **B-56269**
High cadmium content in organisms from Terra Nova Bay [1996, eng] **B-55964**
Hormones and diving in Weddell seals [1995, eng] **B-54303**
Humification dynamics of algal derived dissolved organic carbon [1995, eng] **B-55844**
Hydrocarbon biogeochemistry in cyanobacteria and green algae [1996, eng] **B-55462**
Hydrocarbons in antarctic ice algae [1995, eng] **B-55061**
Hydrodynamic diameter of fish antifreeze molecules [1994, eng] **B-55773**
Hydroponic cultivation, a feasible activity for development in Antarctica [1993, spa] **B-54508**
Ice algae biomass variations around Zhongshan Station [1995, chi] **B-54582**
IgA in elephant seals' milk [1995, eng] **B-54450**
Indian Ocean zooplankton biochemistry [1995, eng] **B-55971**
Inorganic carbon uptake by an antarctic sea-ice diatom, *Nitzschia frigida* [1996, eng] **B-54465**
Inorganic geochemistry and calcium carbonate dynamics [1994, eng] **E-54718**
Intracellular fatty acid-binding protein in antarctic and temperate-zone fishes [1994, eng] **B-55059**
Isolation of polyenoic phosphatidylcholine and phosphatidylethanolamine from antarctic krill [1992, rus] **B-56328**
Isotope ratios of O and C in brachiopods [1995, eng] **B-55213**
Krill oil inhibits murine lupus [1996, eng] **B-55198**
Late Pleistocene glaciomarine sedimentation in Bransfield Strait [1995, chi] **E-54589**
Lichen habitats near Showa Station [1995, eng] **B-54659**
Lichens used in studies of chemical ecological problems [1995, spa] **B-54256**
Lipid levels of expeditioners in Antarctica [1995, eng] **H-55363**
Lipid storage patterns of two species of copepod [1996, eng] **B-55981**
Macroalga: sources of volatile halogenated organic compounds [1996, eng] **B-55037**
Macrolichen oxygen deprivation and inorganic nitrogen uptake [1996, eng] **B-55895**
Maintenance and culture of antarctic organisms with control of physical and chemical variables [1993, spa] **B-54511**
Metabolic differences between two antarctic strains of *Geomyces pannorum* [1996, eng] **B-54491**
Metabolism of breeding chinstrap penguins [1996, eng] **B-55103**
Metabolites from an antarctic sponge-associated bacterium, *Pseudomonas aeruginosa* [1996, eng] **B-55158**
Microalgae epilithic productivity shows high sensitivity to ultraviolet-B radiation [1994, eng] **B-54842**
Microbial sea ice ecology at a coastal antarctic site [1996, eng] **B-55216**
Milk composition annual variation in antarctic fur seals [1995, eng] **B-54114**
Morphology and biochemistry of frozen spermatozoa of male minke whales [1996, eng] **B-55011**
Myoglobin saturation in free-diving Weddell seals [1995, eng] **B-54260**
Na^+/K^+-ATPase in antarctic fish [1995, eng] **B-54910**
Observations on carnivorous feeding in Antarctic calanoid copepods [1995, eng] **B-54649**
Observations on nutrient flow in a maritime "Antarctic Tundra" community [1919, eng] **B-56205**

Occurrence of organic halogens in marine mammals [1995, eng] B-55062
Organochlorine compounds in fish off the Antarctic Peninsula [1996, eng] B-56057
Organochlorine residues in antarctic penguins [1990, eng] B-55342
Oxidants of organic decomposition in Maxwell Bay in summer [1989, chi] E-55718
Oxygen consumption in antarctic tidal zone amphipods [1995, eng] B-56192
Ozone hole and the 1995 Nobel Prize in chemistry [1996, fre] I-55426
Paleoclimatological evolution from sediment analysis of lakes Hotel, Kitezh and Long [1993, spa] E-54521
Particulate organic matter in Terra Nova Bay in summer 1990 [1996, eng] J-54549
Pesticide pollution at Dakshin Gangotri [1996, eng] J-55787
Phosphorus contents in sediments of Scotia Bay [1993, spa] E-54516
Photoadaptation in a coastal phytoplankton bloom [1994, eng] B-54708
Photosynthesis in macroalgae of King George Island [1996, ger] B-55035
Photosynthesis, dark respiration and pigment contents of *Desmarestia menziesii* [1996, eng] B-56256
Photosynthetic variations in the brown alga *Ascoseira mirabilis* [1996, eng] B-55388
Physico-mechanical and hygroscopic properties of antarctic shrimp meal [1986, rus] B-56327
Phytoplankton biomass, productivity and organic carbon in the southern ocean [1996, eng] B-54683
Phytoplankton distribution and species composition around Elephant I., Jan.-Mar. 1994 [1994, eng] B-54698
Phytoplankton nutrient deficiency in Taylor Valley lakes [1994, eng] B-54719
Phytoplankton photobiological characteristics around Elephant I. [1994, eng] B-54697
Phytoplankton pigment profiles, Weddell-Scotia Confluence, spring 1993 [1994, eng] B-54281
Phytoplankton pigments during JARE-30, Nov. 1988-Mar. 1989 [1996, eng] B-56105
Phytoplankton pigments during JARE-31, Nov. 1989-Mar. 1990 [1996, eng] B-56106
Phytoplankton pigments during JARE-32, Nov. 1990-Mar. 1991 [1996, eng] B-56107
Phytoplankton pigments during JARE-33, Nov. 1991-Mar. 1992 [1996, eng] B-56108
Phytoplankton pigments during JARE-34, Nov. 1992-Mar. 1993 [1996, eng] B-56109
Phytoplankton pigments during JARE-35, Nov. 1993-Mar. 1994 [1996, eng] B-56110
Phytoplankton winter-spring biomass and productivity in Lake Bonney [1996, eng] B-54725
Pigmented bacteria from an antarctic lake [1991, eng] B-55207
Plasmid pAA-1 transformation in cryptoendolithic bacterium [1996, eng] B-56111
Polar herbiverous copepods [1995, eng] B-54122
Polar steroids in an antarctic starfish [1996, eng] B-55928
Population structure and chemical defenses in three species of soft corals in McMurdo Sound [1994, eng] B-54422
Potable water characteristics at Esperanza Station [1993, spa] G-54537
Psychrophilic and psychrotrophic respiratory metabolism in antarctic microplankton [1996, eng] B-55961
Radiocarbon-dated subfossil stomach oil deposits from petrel nesting sites [1995, eng] E-55165
Reproduction and dispersal of mosses on Macquarie Island [1987, eng] B-56202
Role of the marginal ice zone in the southern ocean carbon cycle [1996, eng] J-56280
Seasonal lipid dynamics in dominant antarctic copepods [1996, eng] B-55364
Seasonal lipid storage as overwintering strategy of antarctic krill [1996, eng] B-55281
Sesterterpenoids of unprecedented skeletal class from an antarctic sponge [1995, eng] B-54484
Soil algae image analysis for detection of environmental change [1994, eng] B-54382
Some properties of the enzyme preparation "Euphasiidin" [1992, rus] B-56329
Southern elephant seal *(Mirounga leonina).* 2 [1996, eng] B-55187
Spatial and behavioral responses by foraging seabirds to antarctic krill swarms [1994, eng] B-54290
Species distribution within a moss bed in Greater Antarctica [1987, eng] B-56204
Sperm transfer in the Adélie penguin [1996, eng] B-55385
Splenic control in an antarctic fish [1996, eng] B-55096
Stabilized enzymes of antarctic krill [1996, eng] B-54754
Stable isotope composition of larval krill and its winter food sources [1996, eng] B-55980
Standing crop of the coastal macrolichen *Mastodia tesselata* on Petermann I. [1995, eng] B-54173
State of resistance of members of polar expeditions [1992, eng] H-56296
Steroid hormones in female minke whales [1996, eng] B-55405
Steroid metabolism in *Clione antarctica* [1996, eng] B-55402
Stilbene derivative from an antarctic sponge [1995, eng] B-55225
Studies of an antarctic sponge [1995, eng] B-54610
Subantarctic sulfate-reducing bacteria and some physicochemical and biological parameters [1986, fre] B-56275
Sulphur biogeochemistry in meltwater ponds on the McMurdo Ice Shelf [1996, eng] B-54550
Summer activities of several bacterial exoenzymes in the western Antarctic Peninsula [1994, eng] B-54707
Supercooling in a subantarctic fly [1996, eng] B-55413
Surface sediment diatoms and water chemistry in saline lakes of the Vestfold Hills [1996, eng] E-56278
Taxon and lineage of *Nocardiopsis* genus [1996, eng] B-56268
Taxonomy of bacteria from the Livingston I. isolated during the 1986-1987 expedition [1990, spa] B-55249
Terrestrial vegetation of King George I. [1993, pol] B-55513
Tissue distribution of PCBs and pesticides in antarctic penguins [1996, eng] B-55595
Trace elements in tissues of chick and adult Adélie penguins [1996, eng] B-55461
Two dominant antarctic copepod distribution and population dynamics in different water masses during summer [1996, eng] B-56188
Two further bipolar lichens [1995, eng] B-54259
Two new psychrotrophic bacteria species [1991, eng] B-55209
Ultraviolet absorbance by diatom populations from the Weddell-Scotia Confluence [1994, eng] B-54838
Ultraviolet inhibition of carbon fixation in phytoplankton [1994, eng] B-54841
Ultraviolet-B radiation and photosystem II activity in antarctic ice algae [1995, eng] B-54241
Uncommon tetrahydrofuran monoterpenes [1996, eng] B-55412
Uptake of water from the atmosphere by lichens in continental Antarctica [1995, eng] B-55538
Use of light and melatonin for disorders from jet lag and shift work [1994, eng] H-54379
UV radiation and utilization of inorganic nitrogen in the diatom *Odontella weissflogii* [1996, eng] B-54967
Vitamin D in southern elephant seals [1996, eng] B-55442
Volatile organic bases in canned krill [1986, rus] B-56325
Water relations and nutrients of bryophytes at Marion I. [1987, eng] B-56200
Water soluble substances in terrestrial antarctic plants and microbes [1989, eng] B-55649

Biogeography
Benthos studies in Terra Nova Bay, 1987-1992 [1995, eng] B-54773
Biofacies and biostratigraphic constraints on regression in the Fossil Bluff Group, Alexander I. [1993, eng] E-55561
New oxytomid bivalve from the Upper Jurassic-Lower Cretaceous of Antarctica [1996, eng] E-56018
Planktic foraminifera in the subantarctic Atlantic [1996, eng] J-55695

PHYTOGEOGRAPHY
Antarctic marine red algae phylogenetic studies [1996, eng] B-55810
Biogeographic observations on South Georgia marine yeasts [1994, eng] B-54278
Comparison of Cretaceous and Cenozoic history of vegetation and climate in high latitudes [1995, eng] E-55975
Distribution of seaweed floras in the southern ocean [1994, eng] B-54385
Fossil plant remains from Dufayel I. [1986, eng] E-56308
Grapnelispora evansii, Late Cretaceous megaspore from Argentina and Antarctica [1988, spa] E-56305
Latest Paleocene crisis in the deep sea: ostracode succession at Maud Rise, southern ocean [1996, eng] J-55504
Macroalgal community ecosystems in Potter Cove, Antarctica [1996, eng] B-56290
Middle Eocene dinocysts from Bruce Bank, Scotia Sea [1995, eng] E-54188
Morphometric and paleobiogeographic analyses of *Dicroidium* from the Triassic of Gondwana [1995, eng] E-56336
Reappraisal of the Triassic flora from Williams Point [1995, eng] E-54978
Temperature requirements for growth and survival of antarctic Rhodophyta [1996, eng] B-56258

Thermal biosystem of Mount Rittmann fumaroles [1996, eng] B-55311
ZOOGEOGRAPHY
Antarctic benthic ostracods 3: from South Orkney Is. [1988, ger] B-55490
Antarctic benthic ostracods 4: from South Georgia [1989, ger] B-55494
Antarctic cheilostomatous bryozoa [1995, eng] B-56314
Benthic ostracods from Elephant I. and the Antarctic Peninsula [1989, ger] B-55495
Biogeography of brachiopods from Marion and Prince Edward Is. [1994, eng] B-54177
Cellariiform and flustriform microporellid Bryozoa from Antarctica [1989, spa] B-54195
Copepods of Beaver Lake [1993, eng] B-54993
Cretaceous and Paleogene decapods from high latitudes [1994, eng] E-54070
Dispersal of benthic invertebrates in the Scotia Arc by kelp rafting [1994, eng] B-54280
Distribution of surface zooplankton and seabirds across the southern ocean [1996, eng] B-55189
Distribution patterns of microfauna on Queen Maud Land nunataks [1996, eng] B-54728
Early Cambrian archaeocyaths from glacial erratics of King George I. [1996, eng] E-55905
Early Cambrian trilobites from the Shackleton Limestone [1995, eng] E-54253
Eocene brachiopods from La Meseta Formation of Seymour I. [1996, eng] E-55908
Fishes of the Tristan da Cunha group and Gough Island, South Atlantic Ocean [1995, eng] B-55310
Foraminifera, biofacies and sedimentary hydrodynamics in Antarctica [1990, spa] E-55247
Global warming and Paleocene mass extinction in the deep sea [1995, eng] B-55974
Hypothesis on Mesozoic vicariance in Hydromedusae [1996, eng] B-55394
Laophontidae n.sp.(Copepoda: Harpacticoida) from the Weddell Sea [1996, eng] B-55984
Late Cambrian trilobites from the Marine Group, northern Victoria Land, Antarctica [1984, eng] E-55838
Late Cretaceous to Early Tertiary land mammal biogeography [1996, eng] E-56113
Ostracods *Heterocyprideis sorbyana* found on Elephant I. [1994, ger] B-55502
Pliocene Ostracoda from the *Pecten* Conglomerate of Cockburn I. [1996, eng] E-55913
Population dynamics in the southern ocean [1995, eng] B-54124
Surface mesozooplankton biomass distribution in the South Atlantic Ocean [1996, eng] B-56279

BIBLIOGRAPHIES
Bibliography of terrestrial biological research in Queen Maud Land [1994, eng] B-54181
INSTRUMENTS
Algal and moss communities in a dry valley stream [1994, eng] B-54716
Effects of flipper bands on Royal Penguin adult survival rate [1996, eng] B-55542
Effects of small-mammal trapping on birds at Marion I. [1994, eng] B-54182
Effects of TDRs on seal behavior [1995, eng] B-54481
Energy expenditure of free-ranging black-browed albatrosses [1995, eng] B-54186
Hydroponic cultivation, a feasible activity for development in Antarctica [1993, spa] B-54508
Implantable data logging system for estimation of metabolic rates in antarctic predators [1995, eng] B-54410
Japanese antarctic activities for 1995-1996 [1996, eng] A-54266
Lateral target strength of antarctic krill [1996, eng] B-55221
Maintenance and culture of antarctic organisms with control of physical and chemical variables [1993, spa] B-54511
Satellite telemetry of the winter migration of Adélie penguins (*Pygoscelis adeliae)* [1996, eng] B-54729
Speed and time during seals' foraging dives [1995, eng] B-55098
Thermal control and data acquisition systems [1993, spa] B-54515
MAPS AND CHARTS
Antarctic hydromedusae and water masses [1990, eng] B-55349
Energy expenditure of free-ranging black-browed albatrosses [1995, eng] B-54186
Evaluation model for yield and long-term status of fish stocks [1996, eng] B-56098
Leslie depletion model for abundance assessment of the Patagonian toothfish [1996, eng] B-56099
Lichenological assessment at Lions Rump for monitoring biological changes [1994, eng] B-55579
Phytoplankton pigments during JARE-30, Nov. 1988-Mar. 1989 [1996, eng] B-56105
Phytoplankton pigments during JARE-31, Nov. 1989-Mar. 1990 [1996, eng] B-56106
Phytoplankton pigments during JARE-32, Nov. 1990-Mar. 1991 [1996, eng] B-56107
Phytoplankton pigments during JARE-33, Nov. 1991-Mar. 1992 [1996, eng] B-56108
Phytoplankton pigments during JARE-34, Nov. 1992-Mar. 1993 [1996, eng] B-56109
Phytoplankton pigments during JARE-35, Nov. 1993-Mar. 1994 [1996, eng] B-56110
MODELS
Environmental influence on antarctic terrestrial biota [1996, eng] B-54753
Evaluation model for yield and long-term status of fish stocks [1996, eng] B-56098
In situ measurements of the microclimate and net photosynthesis of *Usnea antarctica* from Livingston I. [1990, spa] B-55243
Leslie depletion model for abundance assessment of the Patagonian toothfish [1996, eng] B-56099
Marine mammal-fishery interaction in the southern ocean [1985, eng] B-56196
Model of penguin foraging demands and krill fishery overlap near the South Shetland Is. [1995, eng] B-54432
Modelling attempts of effects of different levels of krill fishing on predators [1995, eng] B-54431
Population changes of elephant seals on Kerguelen Is. during the past 30yr. [1985, eng] B-56197
Primary production model of benthic microbial mats in Lake Hoare [1994, eng] B-54720
Research on Antarctic Shallow Coastal and Littoral Systems (RASCALS) [1995, ger] B-54238
Speed and time during seals' foraging dives [1995, eng] B-55098
Tardigrades from the northern Prince Charles Mountains [1996, eng] B-56247

Birds
See: Aves

Botany
Antarctic Conservation Act of 1978 [1989, eng] M-55053
Antimicrobial activity of antarctic lichens [1919, por] B-56206
Biological survey of the Davis Is. [1996, eng] B-54321
Biological survey of Vesleskarvet Cliff, Ahlmann Ridge [1994, eng] B-54176
Effects of water stress on antarctic green algae [1996, eng] B-54972
Floristic zonation of the southern ocean [1993,] B-56034
Hydroponic cultivation, a feasible activity for development in Antarctica [1993, spa] B-54508
Introduced plants in Antarctica: potential impacts and conservation issues [1996, eng] B-55157
Level of biomass and chlorophyll content of the plant communities, Arctowski Station [1989, pol] B-54367
Mycorrhizal status of *Deschampsia antarctica* in the Palmer Station area, Antarctica [1995, eng] B-55774
Observations on nutrient flow in a maritime “Antarctic Tundra” community [1919, eng] B-56205
Plants used in nest-building by gulls and terns on King George and Nelson islands [1990, eng] B-55347
Reproduction of antarctic flowering plants [1996, eng] B-55312
Reversible photoinhibition in antarctic moss during freezing and thawing [1995, eng] B-54351
Terrestrial vegetation of King George I. [1993, pol] B-55513
Vegetation of subantarctic Campbell Island [1994, eng] B-54231

Sulfide oxidation products in the antarctic atmosphere [1996, eng] I-55306
Temporal structure of surface weather parameters at Casey, Davis, Mawson and Macquarie Island [1993, eng] I-56138
Time-dependent wave-packet studies on the sticking of HCl to an ice surface [1996, eng] I-55045
Ultraviolet and visible solar irradiance at the Weddell-Scotia Confluence, spring 1993 [1994, eng] I-54840
Ultraviolet radiation in the southern seas in early spring 1993 [1994, eng] F-54833
Unsuitability of meteoritic and other nuclei for polar stratospheric cloud freezing [1996, eng] I-55642

Uptake of chlorine dioxide by model PSCs under stratospheric conditions [1996, eng] **I-54810**
Uptake of HBr on ice at polar atmospheric conditions [1995, eng] **I-54413**
UV absorption spectra of H_2O/HNO_3 films [1996, eng] **I-56042**

Coelenterata
BEHAVIOR
Population structure and chemical defenses in three species of soft corals in McMurdo Sound [1994, eng] **B-54422**
BREEDING CYCLES AND REPRODUCTION
New primnoid gorgonians (Coelenterata: Octocorallia) from antarctic waters [1996, eng] **B-55309**
ECOLOGY
Antarctic hydromedusae and water masses [1990, eng] **B-55349**
Tertiary corals from King George I. [1995, chi] **E-54596**
EMBRYOLOGY
New primnoid gorgonians (Coelenterata: Octocorallia) from antarctic waters [1996, eng] **B-55309**
EVOLUTION
Hypothesis on Mesozoic vicariance in Hydromedusae [1996, eng] **B-55394**
GEOGRAPHIC DISTRIBUTION
Antarctic hydromedusae and water masses [1990, eng] **B-55349**
Hydromedusae and Siphonophora from the water area northwest of the Antarctic Peninsula [1989, chi] **B-55728**
Hypothesis on Mesozoic vicariance in Hydromedusae [1996, eng] **B-55394**
New antarctic coelenterate species [1996, eng] **B-55802**
Oswaldella shetlandica Stepan'yants, 1979 and *O. elongata* n.sp. (Cnidaria:Hydrozoa) [1995, eng] **B-55936**
MORPHOLOGY
Diatoms as primary diet of benthic hydroids [1996, eng] **B-55963**
Hydromedusae and Siphonophora from the water area northwest of the Antarctic Peninsula [1989, chi] **B-55728**
New antarctic coelenterate species [1996, eng] **B-55802**
New primnoid gorgonians (Coelenterata: Octocorallia) from antarctic waters [1996, eng] **B-55309**
Oswaldella shetlandica Stepan'yants, 1979 and *O. elongata* n.sp. (Cnidaria:Hydrozoa) [1995, eng] **B-55936**
Paleogene corals from Seymour Island, Antarctic Peninsula [1996, eng] **E-55907**
Redescription of *Oswaldella antarctica* (Cnidaria: Hydrozoa) [1995, eng] **B-55935**
Tertiary corals from King George I. [1995, chi] **E-54596**
NUTRITION
Diatoms as primary diet of benthic hydroids [1996, eng] **B-55963**
PHYSIOLOGY
Population structure and chemical defenses in three species of soft corals in McMurdo Sound [1994, eng] **B-54422**
POPULATION
Antarctic hydromedusae and water masses [1990, eng] **B-55349**
Population structure and chemical defenses in three species of soft corals in McMurdo Sound [1994, eng] **B-54422**
TAXONOMY
Antarctic hydromedusae and water masses [1990, eng] **B-55349**
Hypothesis on Mesozoic vicariance in Hydromedusae [1996, eng] **B-55394**
New antarctic coelenterate species [1996, eng] **B-55802**
New primnoid gorgonians (Coelenterata: Octocorallia) from antarctic waters [1996, eng] **B-55309**
Oswaldella shetlandica Stepan'yants, 1979 and *O. elongata* n.sp. (Cnidaria:Hydrozoa) [1995, eng] **B-55936**
Paleogene corals from Seymour Island, Antarctic Peninsula [1996, eng] **E-55907**
Redescription of *Oswaldella antarctica* (Cnidaria: Hydrozoa) [1995, eng] **B-55935**

Polar news/Notizie polari, Vol.10, No.12 [1995, ita] A-54770
Power and strategies: aspects of antarctic political geography [1994, ita] M-54336
Precutionary measures for the krill fishery [1996, eng] B-56096
Reason for a new geography for Antarctica [1994, ita] A-54334
Relations between elements of the Antarctic Treaty System [1995, eng] A-55299
Report of the CCAMLR 14th meeting, 1995 [1995, eng] B-55471
Report of the SC-CAMLR 14th meeting, 1995 [1995, eng] B-55470
Report of the United States Antarctic Inspection, Feb. 9 to Mar. 11, 1995 [1995, eng] M-55427
Restoration programs on Amsterdam I. and the Kerguelen Is. [1996, fre] B-56344
Review of studies at SSSI No.32 and CEMP Site "Cape Shirreff and San Telmo Island" [1995, spa] B-54987
SCAR bulletin No.122, July 1996 [1996, eng] A-55409
Terrestrial flora and fauna of the AAT [1993, eng] B-55532
Terrestrial vegetation of King George I. [1993, pol] B-55513
Towards a conservation strategy for the Australian Antarctic Territory [1993, eng] M-55528
Why is an Antarctic conservation strategy necessary? [1993, eng] M-55531

Construction
Automatic integrated module installed at Terra Nova Bay [1994, eng] G-54883
Diversity of modern antarctic vessels [1994, eng] G-54882
Museum in Antarctica [1996, spa] A-55359
Also used as subordinate term under various types of ice (snow)
BUILDING
Design of undersnow facilities for Byrd Station [1962, eng] G-54670
Development of a mobile garage/vehicle servicing facility, Halley scientific station [1994, eng] G-54864
Historic hut destruction by wind at Cape Adare [1996, eng] I-54316
Industrial archaeology at South Georgia: methods and results [1996, eng] G-54320
JARE-33 activities in summer 1991-1992 and winter 1992 [1996, jpn] D-55590
Preliminary report on the condition of the South Pole Station [1989, eng] G-55955
Relocation of telecommunication facilities at Syowa Station [1995, jpn] G-54499

Thoughts on a structure for assembling balloon experiments at Williams Field, Antarctica [1989, eng] G-55954

DOCK

Palmer Station docking facility. Conceptual engineering study [1986, eng] G-54731

EQUIPMENT

Casey Airfield project report, summer 89/90 [1990, eng] G-55855
Development of a continuous thermosalinograph [1993, spa] J-54514
Polar hydrocarbon technologies: future developments [1995, eng] A-55212

RUNWAY

Antarctica assignment—it's not just a job [1986, eng] G-55837
Casey Airfield project report, summer 89/90 [1990, eng] G-55855
Concept of the cooperative air transport system in East Antarctica [1994, eng] G-54881
Location of blue ice runway sites—report on air photo search [1988, eng] E-55942
Pegasus: a glacial-ice runway for wheeled flight operations at McMurdo Station [1995, eng] F-55632
Polar news/Notizie polari, Vol.10, No.11 [1995, ita] A-54270
Utilization of large aircraft in the Antarctic [1996, jpn] G-56340
Workshop on Antarctic Air Transport Networks [1995, eng] G-55547

STATION

Antarctic commute: CRREL searches for safe land route to South Pole [1996, eng] G-54438
Antarctic journal of the United States, Vol.27, No.3 [1992, eng] A-55611
Casey Airfield project report, summer 89/90 [1990, eng] G-55855
Design of undersnow facilities for Byrd Station [1962, eng] G-54670
Dome-Fuji deep drilling facility, JARE 35 [1995, jpn] G-54496
German antarctic receiving station [1993, eng] A-55986
Infrastructure development and environmental management in Antarctica [1993, eng] M-55535
Long range development plan, Palmer Station [1984, eng] G-55882
Polar news/Notizie polari, Vol.10, No.11 [1995, ita] A-54270
Preliminary report on the condition of the South Pole Station [1989, eng] G-55955
Seismic observatory in Terra Nova [1995, eng] L-54950
United States Antarctic Program [1996, eng] M-55444
Utilities and systems for the new Amundsen-Scott Station [1996, eng] G-55505
Waste management concept at the German winter station Neumayer [1994, eng] G-54865

Containers

Automatic integrated module installed at Terra Nova Bay [1994, eng] G-54883

Continental drift

Architecture of Gondwana during rifting between Australia and Antarctica [1993, eng] E-55570
Comparison of Cretaceous and Cenozoic history of vegetation and climate in high latitudes [1995, eng] E-55975
Continental fragmentation in the Scotia Sea, Antarctica [1996, eng] E-55473
Correlation of New Zealand granitoids with antarctic sediments [1996, eng] E-55085
Cratonic and orogenic provinces in Africa and Queen Maud Land [1993, eng] E-55552
Discussion of paper by Shiraishi et al [1995, eng] E-56177
Early Paleozoic continental-rise deposition off East Antarctica [1994, eng] E-54090
Eclogite at the antarctic paleo-Pacific active margin of Gondwana [1996, eng] E-55599
Geochemistry of mafic dike rocks, Sør Rondane Mountains [1995, eng] E-54618
Geodynamic links between the Transantarctic Mountains and Tethys [1994, eng] E-54088
Geological outline of the Ross Sea [1994, ita] E-54341
Geology of the Shackleton Range and Coats Land nunataks [1994, eng] E-54072
Geomagnetic field and tectonics of the southeast Pacific [1989, chi] E-55755
Geomorphology and geological history of Broken Ridge in eastern Indian Ocean [1985, rus] E-56181
Gondwana eight: assembly, evolution and dispersal [1993, eng] E-55548
Gondwana reconstruction of the Ross/Delamerian orogens in Victoria Land and Australia [1993, eng] E-55554
Gondwana supercontinent: Proterozoic [1993, eng] E-55549
Gondwanan foreland basin along the Panthalassan margin of Antarctica [1993, eng] E-55564
Gondwanian implications of Australian basalt petrogenesis [1996, eng] E-56179
Grenville-age belts and associated older terranes in Australia and Antarctica [1995, eng] E-54908
Initial stages of the spreading between Australia and Antarctica based on a propagating rift model [1985, rus] E-56182
Jurassic faulting and magmatism in the Transantarctic Mountains [1993, eng] E-55569
Jurassic phreatomagmatic volcanism in the central Transantarctic Mountains [1994, eng] E-54086
Kannack complex of the Indochina Block—a possible fragment of Gondwanaland [1993, eng] E-55557
Kenyan paleomagnetic data implications for Gondwana assembly [1996, eng] L-55474
Lachlan fold belt linked to lithospheric mantle exhumation [1996, eng] E-56058
Late Proterozoic to Early Paleozoic paleomagnetism and formation of Gondwanaland [1993, eng] E-55550
Mafic and ultramafic igneous suites in the Lambert-Amery rift zone [1993, eng] E-55566
Mesozoic alkaline-ultrabasic magmatism of Jetty Peninsula [1993, eng] E-55567
Morphometric and paleobiogeographic analyses of *Dicroidium* from the Triassic of Gondwana [1995, eng] E-56336
New Zealand Cambrian volcanic sediments related to Gondwana evolution [1995, eng] E-55386
Paleomagnetism of Early Tertiary volcanic rocks from South Shetland Is. [1995, chi] E-54592
Peridotites from the seamount off Wilkes Land, Antarctica [1995, eng] E-54627
Plate path plotting for the determination of Ordovician position of Gondwana continents [1993, eng] E-55565
Preliminary model for the 500 Ma event in the East Antarctic Shield [1993, eng] E-55553
Reconnaissance apatite fission-track data from the East Antarctic Shield [1993, eng] E-55571
Reconstruction of the late Palaeozoic ice sheet on southwestern Gondwana [1993, eng] E-55562
Review of the Precambrian geology of Sri Lanka and its comparison with Antarctica [1993, eng] E-55551
SKS splitting at Showa Station [1995, eng] L-54615
Structural features of the northeastern sector of the Antarctic Peninsula [1993, spa] E-54533
Structure and evolution of the Antarctic shield in Precambrian [1993, eng] E-55555
Synthetic Australian and Antarctic polar wander path since 250 Ma [1996, fre] L-56118
Tectonics and climate [1996, eng] J-56291
Tectonics and paleomagnetism of Early Tertiary volcanics at South Shetland Is. [1995, eng] E-54566

Continental ice

See: Glacier ice; Ice sheet

Continental shelf

Benthic foraminifera off the Antarctic Peninsula [1994, eng] B-54393
Bottom plumes on the continental slope [1995, eng] J-55208
Continental margin of the northwest part of the Antarctic Peninsula [1989, chi] E-55758
Crustal transitions in the Bransfield Trough and the South Scotia Ridge [1995, eng] E-54691
Early Paleozoic continental-rise deposition off East Antarctica [1994, eng] E-54090
Evidence for a fluidized till deposit on the Ross Sea continental shelf [1994, eng] E-54277
Fall birds and mammals in the Amundsen and Bellingshausen Seas [1994, eng] B-54161
Fall phytoplankton biomass, P-I relationships and primary production in the Weddell Sea [1996, eng] B-54687
Geochemistry in an area recently uncovered from the Filchner Ice Shelf [1996, eng] J-55854
Geomorphology of the shelf of the South Shetland Islands within the limits of Bransfield Strait [1989, pol] E-54363
Holocene glacial marine sediments in the Palmer Deep Basin [1993, eng] E-54748
Hydrography in the LTER region during Aug. and Sep. 1993 [1994, eng] J-54710
Isotope analysis of Weddell Sea sediment stratigraphy and paleoproductivity [1995, eng] J-54299
Oceanographic expedition to the Amundsen and Bellingshausen Seas [1994, eng] J-54157
Petrography of fragmented material from bottom sediments of the Weddell Sea [1986, rus] E-56318
Polar hydrocarbon technologies: future developments [1995, eng] A-55212
Possible influence of glacial eustasy on antarctic shelf stratigraphy [1996, eng] E-55055
R/V OGS-Explora: 7th antarctic cruise, Leg 1 - ODP proposal #452 [1995, eng] E-54940

R/V OGS-Explora: 7th antarctic cruise, Leg 1-SEDANO [1995, eng] **E-54939**
Reconnaissance apatite fission-track data from the East Antarctic Shield [1993, eng] **E-55571**
Sedimentological data on cores from the Joides Basin [1995, eng] **E-54947**
Seismic survey of the Ross Sea continental shelf [1994, eng] **E-54276**
Seismic surveys of Ross Sea for links between eustatic changes and sequence architecture of continental margins [1994, eng] **E-54275**
Structure and ecology of antarctic deep-sea meiofauna [1995, eng] **B-54197**
Temporal changes in shelf water of the southern Ross Sea [1994, eng] **J-54271**
Thermal evolution within the Ross Orogen, Antarctica [1996, eng] **E-55352**
Topography of the continental margin off Wilkes Land [1995, eng] **E-54628**
Trace elements in the Weddell Sea water and sediments in the continental shelf area [1995, eng] **J-54115**
Upper Cretaceous trace fossils from the storm-dominated Rabot Formation on James Ross I. [1993, spa] **E-54520**
Water masses of the Ross Sea and dispersal of suspended matter [1994, ita] **J-54342**

Firn
Atmospheric gases at the South Pole [1996, eng] **I-55900**
Snow studies at Maudheim [1958, eng] **F-55616**

CHEMISTRY
Atmospheric CO_2 variations inferred from antarctic ice composition [1996, eng] **F-54487**
First results of $^{15}N/^{14}N$ ratios in nitrate from alpine and polar ice cores [1996, eng] **F-54646**

CORES
Century of accumulation and temperature changes in Dronning Maud Land, Antarctica [1996, eng] **F-54907**

DENSITY
Taylor Ice Dome study 1993-1994: an ice core to bedrock [1994, eng] **F-54107**

PHYSICAL PROPERTIES
Effects of snow ventilation on chemical concentrations [1996, eng] **F-55828**

POLLUTION
Recent climate anomalies and their impact on snow chemistry at South Pole, 1987-1994 [1996, eng] **I-56211**

STRATIGRAPHY
Acidic gases: a review of ice core data and their air-snow relationships [1996, eng] **F-55821**
Chemical exchange processes among air, snow, and ice [1996, eng] **F-55827**
Gas diffusion in firn [1996, eng] **F-55831**
Holocene climate changes recorded in an East Antarctica ice core [1996, eng] **F-55917**
Location, movement and reactions of impurities in solid ice [1996, eng] **F-55832**
Passive microwave remote sensing of snow: volume scattering in antarctic firn [1995, eng] **F-54811**
Peroxide record from the DSS ice core, Law Dome, Antarctica: preliminary results [1996, eng] **F-55834**
Summer temperatures from an ice core at Law Dome [1989, chi] **F-55714**

STRUCTURE
Microwave emission from density-stratified antarctic firn at 6 cm wavelength [1996, eng] **F-55080**

TEMPERATURE
German Filchner V Campaign in 1995: results from Berkner I. [1995, eng] **F-56079**
Microwave emission from density-stratified antarctic firn at 6 cm wavelength [1996, eng] **F-55080**

First aid
Low-technology telemedicine in Antarctica [1995, eng] **H-54381**

INSTRUMENTS
Antarctic automatic instrumentation for general data acquisition [1990, spa] I-55269
Antarctic instrumentation. Seismic Digital Net [1990, spa] L-55270
Infrared spectrometry of biogenic silica, smectites and plagioclases in sediments from the Kerguelen Plateau [1991, fre] E-56304

Japanese antarctic activities for 1995-1996 [1996, eng] A-54266
MAPS AND CHARTS
Cape Melville Formation: Lower Miocene glaciomarine deposits on King George I. [1995, eng] E-54751
Cratonic and orogenic provinces in Africa and Queen Maud Land [1993, eng] E-55552
Dating of volcanic rocks on King George I. [1995, chi] E-54580
Disturbances of isotopic systems in the Kirkpatrick Basalt, Victoria Land [1993, eng] E-55560
Early Cambrian trilobites from the Shackleton Limestone [1995, eng] E-54253
Early Cretaceous magmatism within the Antarctic Peninsula magmatic arc [1996, eng] E-56294
Early Paleozoic continental-rise deposition off East Antarctica [1994, eng] E-54090
Euhedral calcic plagioclase inclusions in garnet from the Lützow-Holm Complex [1995, eng] E-54622
Evolution of metamorphic and intrusive rocks from the Sør Rondane Mountains [1995, eng] E-54620
Explanatory text of geological map of the northern Yamato Mountains, Antarctica: (2) Mt. Torimai [1995, eng] E-54764
Fern thickets from the Cretaceous of Alexander I. [1996, eng] E-55159
Field work on Cambro-Ordovician granitoids in the Wilson Terrane [1995, eng] E-54930
Geochemistry and mineralogy of tufa of the Ameghino Formation [1993, spa] E-54541
Geochemistry of mafic dike rocks, Sør Rondane Mountains [1995, eng] E-54618
Geodynamic links between the Transantarctic Mountains and Tethys [1994, eng] E-54088
Geological mapping, West Falkland Is. [1996, eng] E-55691
Geology and regional metamorphism of the northeastern Shackleton Range [1995, eng] E-54931
Geology of Cape Dubouzet and the Trinity Peninsula Group [1996, eng] E-56286
Geology of Cretaceous magmatic rocks at Paradise Harbor [1994, eng] E-55816
Geology of Gerlache Strait—Arctowski Peninsula [1995, eng] E-55575
Geology of the High Grade Metamorphic Complex of Wilson Terrane [1995, eng] E-54929
Geology of the Lanterman Metamorphic Complex, Victoria Land [1994, eng] E-54082
Geology of the Miers Bluff Formation, Hurd Peninsula [1994, eng] E-55817
Glacial-interglacial depositional model in Bransfield Basin [1994, eng] E-54273
Investigation of the Ferrar Supergroup in the area between David Glacier and 76°00'S [1995, eng] E-54933
Isotopic and chemical compositions of Ferrar magmas from Victoria Land [1995, eng] E-54111
Jurassic faulting and magmatism in the Transantarctic Mountains [1993, eng] E-55569
K-Ar ages of the Cabral Formation on the Antarctic Peninsula [1993, spa] E-54536
Late Cenozoic tectonics and the dynamics of the west antarctic ice sheet [1994, eng] E-54073
Location of blue ice runway sites—report on air photo search [1988, eng] E-55942
Mapping and petrology of the Proterozoic Read Metamorphic Complex in the Shackleton Range [1995, eng] E-54932
Mesozoic alkaline-ultrabasic magmatism of Jetty Peninsula [1993, eng] E-55567
Mesozoic volcanism in the central Transantarctic Mountains [1993, eng] E-55559
Metamorphic age of garnet-pyroxene granulite from the Søstrene Is. [1995, chi] E-54590
Mineral ages across the Lützow-Holm Complex [1995, eng] E-54625
Mineral detection associated with alkaline-ultrabasic rocks in Prince Charles Mountains [1993, eng] E-55568
Mineral paragenesis of the sapphirine-bearing rock from Austkampane Hills [1995, eng] E-54619
New observations about the Latady basin from the Orville Coast, Antarctic Peninsula [1996, eng] E-55601
New stratigraphical unit in the Transantarctic Mountains [1996, eng] E-56284
Paleomagnetic study of the northern Ford Ranges [1996, eng] E-55006
Permo-Triassic sedimentation within the Lambert Graben, Prince Charles Mountains [1993, eng] E-55558
Petrochemical characteristics of the igneous rocks of the Fisher Massif (East Antarctica) [1993, rus] E-54960
Petroleum potential of the Falkland Islands offshore area [1996, eng] E-55293
Productivity and meltwater cycles in Andvord Bay: paleoclimatology [1996, eng] E-54769
Reconnaissance apatite fission-track data from the East Antarctic Shield [1993, eng] E-55571
Record of Holocene paleoclimate changes from glacial marine sediments in Lallemand Fjord [1996, eng] E-54767
Review of Tertiary glaciation in King George Bay [1990, eng] E-55348
Sapphirine-bearing silica-undersaturated granulites from Forefinger Point [1995, eng] E-54623
Sediment descriptions, USAP cruise II, 1992 [1996, eng] E-56260
Stability field of amphibole from the Sør Rondane Mountains [1995, eng] E-54621
Structural and metamorphic geology, Windmill Is. [1995, eng] E-54164
Subdivision and history of metamorphic rocks from Prince Charles Mountains [1993, eng] E-55556
Substitution of Si^{IV} by Al^{IV} as indicator of consanguineous eruptive rocks at Hope Bay [1993, spa] E-54526
Tectonic structure of the Pedersen Nunatak [1993, spa] E-54531
Trinity Peninsula Group at Paradise Harbor [1992, eng] E-56250
Using multiple data sources to enhance photogrammetry for mapping antarctic terrain [1995, eng] C-55278
Volcanic history of Mount Sidley [1994, eng] E-54394
Volcanic succession at Deception I. [1992, eng] E-56251

MODELS
Glacial-interglacial depositional model in Bransfield Basin [1994, eng] E-54273
Gondwanan foreland basin along the Panthalassan margin of Antarctica [1993, eng] E-55564
Initial stages of the spreading between Australia and Antarctica based on a propagating rift model [1985, rus] E-56182
Isotopic and chemical compositions of Ferrar magmas from Victoria Land [1995, eng] E-54111
Non-equilibrium process in magmatism of the Fildes Peninsula [1996, chi] E-55323
Origin and significance of acid magmas on Deception I. [1993, spa] E-54538
Petrogenic model for volcanic rocks on Deception I. [1993, spa] E-54545
Plate motions, SW Pacific/Antarctica [1995, eng] E-55675
Preliminary model for the 500 Ma event in the East Antarctic Shield [1993, eng] E-55553
Problems in geodynamic studies of Antarctica [1989, pol] E-54356
Speculative stratigraphic model for the central Ross embayment [1994, eng] E-54074
Structural and metamorphic geology, Windmill Is. [1995, eng] E-54164
Subdivision and history of metamorphic rocks from Prince Charles Mountains [1993, eng] E-55556
Uplift of Transantarctic Mountains in northern Victoria Land [1994, eng] L-55058

Geomagnetic disturbances
Australian upper atmospheric and space physics research in Antarctica, 1992 [1992, eng] K-54203
Ducted whistler-mode signals received at two widely spaced locations [1996, eng] K-55527
Electron concentration and meteorological parameters at Molodezhnaya [1995, eng] K-55767
Transient auroral events observed from South Pole Station [1994, eng] K-55128
BAYS AND PULSATIONS
Comparative study of auroral modulation and ground Pi2 oscillations (Extended abstract) [1996, eng] K-55377
Electron precipitation and high latitude magnetic pulsations [1994, eng] K-54443
Generation and propagation mechanisms of Pi2 geomagnetic pulsations [1992, eng] K-54211
Geomagnetic pulsation anomaly at Showa Station [1996, jpn] K-55586
Ground-satellite observations of high latitude Pc1-2 pulsations [1992, eng] K-54209
Low-frequency radio emission variation in the antarctic magnetosphere [1996, eng] K-54345
Magnetic impulse events measured at Pc 1 frequencies and at multiple sites [1994, eng] K-55123
Multi-site high-latitude ULF magnetic pulsation studies [1992, eng] K-54206
Multistation study of long period geomagnetic pulsations in the polar cleft and cusp [1992, eng] K-54207

Pc1-2 pulsations observed by a search-coil magnetometer at AGO-P2 [1994, eng] **K-55147**
Photometry of antarctic auroral pulsations [1995, eng] **K-55524**
Propagation of Pc1 magnetic bursts across the polar cap region [1992, eng] **K-54210**
Radar studies of magnetosphere dynamics [1995, eng] **K-55039**
Simultaneous enhancement of Pc1, Pc4, Pc5 hydromagnetic waves at AGO-P2, Antarctica [1994, eng] **K-55146**
Sources and velocities of Pcl-2 ULF waves at high latitudes [1995, eng] **K-54976**
Sources of solar wind associated Pc3-5 magnetic pulsations in the magnetosphere [1992, eng] **K-54208**
ULF magnetic pulsation studies in Antarctica [1992, eng] **K-54204**
STORMS
Auroral research [1995, eng] **K-55041**
Daytime measurements of optical auroral emissions from Antarctica [1995, eng] **K-56136**
Flux and fluence of major solar proton events and their record in antarctic snow [1994, eng] **K-55019**
Generation and propagation mechanisms of Pi2 geomagnetic pulsations [1992, eng] **K-54211**
Global thunderstorm tracking via measurements of radio atmospherics at Palmer Station [1994, eng] **K-55124**
Ground-based optical observations of daytime auroral emissions from Antarctica [1995, eng] **K-54116**
Magnetic storm changes at Zhongshan Station and in China [1996, chi] **K-55327**
Geomagnetic field
Australian upper atmospheric and space physics research in Antarctica, 1992 [1992, eng] **K-54203**
Cosmic ray observations from a station on Dome A [1992, eng] **K-54230**
Paleomagnetic investigations in Victoria Land [1995, eng] **L-54934**
Polar cusp, plasma mantle particles and their relationships to polar rain [1996, eng] **K-55373**
Solar modulation processes as recorded by cosmic ray telescopes [1992, eng] **K-54224**
Time lag of auroral breakup in conjugate hemispheres [1996, eng] **K-55376**

Polar ice sheet ice crystal characteristics [1996, eng] **F-56043**
Progress in glaciology and Quaternary glaciation research in China since 1978 [1995, eng] **F-54971**
Relevance of glacial bed debris to glacial mechanics [1996, eng] **E-55544**
Validation of theory of moraine formation beneath polar ice sheets [1995, eng] **F-55940**
Vostok ice core deuterium variations over the last two glacial cycles [1995, eng] **I-54790**

DEFORMATION
Internal layer folding patterns from radar studies of ice streams B and C [1994, eng] **F-54101**

DRILLING
Breakdown freezes ice core project [1996, eng] **A-54490**
Dome-Fuji deep drilling facility, JARE 35 [1995, jpn] **G-54496**
Freshwater sub-ice antarctic lake [1996, eng] **E-55121**
Hot water drilling in antarctic ice for neutrino detectors [1996, eng] **F-55629**
Lake Vostok beneath the antarctic ice sheet—a Russian research proposal [1995, jpn] **F-54498**
Lake Vostok—freshwater time capsule [1996, eng] **E-55948**
On the age vs depth and optical clarity of deep ice at the South Pole [1995, eng] **F-54065**

South Pole neutrino trap languishes in the snow [1996, eng] K-55076
ELECTRICAL PROPERTIES
Electrical conductivity measurements in ice [1995, eng] F-54243
FLOW
Evidence for a fluidized till deposit on the Ross Sea continental shelf [1994, eng] E-54277
Geodesic dome in Antarctica threatened by snow movement [1988, eng] G-55836
Hydrographic and climatic changes and proglacial Druzhby drainage system [1996, eng] E-56283
Ice flow observations along traverse routes from the coast to Dome Fuji [1995, eng] F-54044
Ice velocities near a relict flow feature on Siple Dome [1994, eng] F-54100
Internal layer folding patterns from radar studies of ice streams B and C [1994, eng] F-54101
Late Cenozoic tectonics and the dynamics of the west antarctic ice sheet [1994, eng] E-54073
Moraine observations at the foot of Independence Hills [1995, eng] E-54912
Progress in ice-stream basal modeling [1994, eng] F-54099
Satellite imagery of the onset of streaming flow of ice streams C and D, West Antarctica [1996, eng] F-54890
South Pole wanders from the straight and narrow [1996, eng] F-54823
Temperature measurements in the margin of ice stream B, 1993-1994 [1994, eng] F-54098
West Antarctic ice sheet removal of subglacial volcanic artefacts [1995, eng] E-54235
FORMATION
Cenozoic glaciation: the marine record established by ocean drilling [1992, eng] E-56175
East Antarctic Ice Sheet development during the Middle Miocene climatic transition from 16 to 12 Ma [1993, eng] F-56133
Initiation of a continental ice sheet in a global climate model (GENESIS) [1996, eng] I-55949
Maintenance of the last great ice sheets: a UGAMP GCM study [1996, eng] F-55276
Neogene East Antarctic ice sheet: a dynamic or stable feature? [1995, eng] F-55923
Reconstruction of the late Palaeozoic ice sheet on southwestern Gondwana [1993, eng] E-55562
Southwest Pacific paleoceanography and development of the East Antarctic Ice Sheet [1995, eng] J-54267
HEAT EXCHANGE
Atmospheric surface pressure over the interior of Antarctica [1996, eng] I-55321
Polythermal model of the antarctic ice sheet [1996, eng] F-55627
SCAR report No.11, Feb. 1996 [1996, eng] I-55365
LUMINESCENCE
Radiation exposure rate over the antarctic ice sheet [1995, eng] K-54482
Ultratransparent antarctic ice as a supernova detector [1996, eng] K-55573
MAGNETIC EXPLORATION
Magnetotelluric profiling of rift dormancy beneath West Antarctica [1996, eng] E-56021
Surface ice flow and anisotropic internal radar echoes in Queen Maud Land ice sheet [1995, eng] F-54246
MASS BALANCE
Ablation rates under the Ekström Ice Shelf deduced from different methods [1995, eng] F-56072
Antarctic ice sheet mass balance [1961, ger] F-55625
Antarctic ice sheet melting in the southeast Pacific [1996, eng] F-55217
Century of accumulation and temperature changes in Dronning Maud Land, Antarctica [1996, eng] F-54907
Comparison of ice-sheet satellite altimeter retracking algorithms [1996, eng] F-54298
Elastic response of the earth to interannual variations in antarctic precipitation [1995, eng] F-54412
Ice sheets [1993, eng] F-55815
Ice sheets, climate change and sea level [1996, eng] F-54479
Long-term observations for monitoring of the cryosphere [1995, eng] I-54448
Mesoscale atmospheric circulations over the southwestern Ross Sea sector, Antarctica [1996, eng] I-56140
Modeling and observational study of East Antarctic surface mass balance [1996, eng] I-54400
Numerical simulation of Shirase Glacier [1995, eng] F-54247
Polythermal model of the antarctic ice sheet [1996, eng] F-55627
Role of the Antarctic in global change [1993, eng] F-56003
MORPHOLOGY
Changes in the configuration of ice stream flow from the West Antarctic ice sheet [1996, eng] F-54909
Internal and basal ice changes near the grounding line derived from radio-echo sounding [1996, eng] F-55082
Mid to Late Holocene readvance of the Law Dome ice margin [1996, eng] F-56285
Satellite imagery of the onset of streaming flow of ice streams C and D, West Antarctica [1996, eng] F-54890
PHYSICAL PROPERTIES
Antarctic ice sheet [1996, eng] F-55087
POLLUTION
Electrical conductivity measurements in ice [1995, eng] F-54243
RADIATION
On radio detection of ultrahigh energy neutrinos in antarctic ice [1996, eng] K-54761
Snow and ice reflectance spectra of the Nansen Ice Sheet surfaces [1996, eng] F-55223
Topographic origin for double-ridge features in visible imagery of ice divides in Antarctica [1995, eng] F-54067
Ultratransparent antarctic ice as a supernova detector [1996, eng] K-55573
SEISMIC EXPLORATION
Lake Vostok beneath the antarctic ice sheet—a Russian research proposal [1995, jpn] F-54498
SOUNDINGS
First results of short pulse radio echo sounding on the top of Berkner Island [1995, eng] F-56086
Internal layer folding patterns from radar studies of ice streams B and C [1994, eng] F-54101
Inventory of Antarctic sub-glacial lakes [1996, eng] F-55600
Lake Vostok beneath the antarctic ice sheet—a Russian research proposal [1995, jpn] F-54498
Late Cenozoic tectonics and the dynamics of the west antarctic ice sheet [1994, eng] E-54073
Microwave emission from density-stratified antarctic firn at 6 cm wavelength [1996, eng] F-55080
Surface ice flow and anisotropic internal radar echoes in Queen Maud Land ice sheet [1995, eng] F-54246
STRATIGRAPHY
Validation of theory of moraine formation beneath polar ice sheets [1995, eng] F-55940
STRUCTURE
Inland ice and nunataks, Queen Maud Land [1959, eng] F-55517
Internal layer folding patterns from radar studies of ice streams B and C [1994, eng] F-54101
Mid to Late Holocene readvance of the Law Dome ice margin [1996, eng] F-56285
SURFACE FEATURES
Antarctic map from the Geosat Radar Altimeter Geodetic Mission [1992, eng] C-55933
Application of synthetic aperture radar (SAR) imagery on antarctic glaciology [1995, jpn] F-54995
Approximation of ice sheet from ERS-1 radar altimeter in the Filchner Ronne Ice Shelf [1995, eng] F-56069
Comparison of ice-sheet satellite altimeter retracking algorithms [1996, eng] F-54298
Employment of ERS-1 SAR interferometry in Antarctica [1994, fre] C-55804
Enhanced-resolution ERS-1 scatterometer imaging of antarctic ice [1994, fre] C-55805
Ice sheet surface features between 80 and 90S, along 90W [1995, eng] F-54918
Ice velocities near a relict flow feature on Siple Dome [1994, eng] F-54100
Location of blue ice runway sites—report on air photo search [1988, eng] E-55942
Meteorites as surface exposure markers of blue icefield stability [1994, eng] E-54095
Review of the airborne radio echo sounding data of the Filchner-Ronne Ice Shelf [1995, eng] F-56083
Satellite imagery of the onset of streaming flow of ice streams C and D, West Antarctica [1996, eng] F-54890
Snow and ice reflectance spectra of the Nansen Ice Sheet surfaces [1996, eng] F-55223
Topographic origin for double-ridge features in visible imagery of ice divides in Antarctica [1995, eng] F-54067
TEMPERATURE
Newly detected ablation phenomenon in Dronning Maud Land, Antarctica [1995, eng] F-56306
On radio detection of ultrahigh energy neutrinos in antarctic ice [1996, eng] K-54761

Temperature measurements in the margin of ice stream B, 1993-1994 [1994, eng] **F-54098**
THAWING
Evidence for a fluidized till deposit on the Ross Sea continental shelf [1994, eng] **E-54277**
Neogene East Antarctic ice sheet: a dynamic or stable feature? [1995, eng] **F-55923**
Paleoceanographic analyses of Pleistocene climatic variability [1996, eng] **J-56047**
THICKNESS
Behavior of the East Antarctic ice sheet as deduced from a coupled GCM/ice-sheet model [1995, eng] **F-54974**
Comparison of ice-sheet satellite altimeter retracking algorithms [1996, eng] **F-54298**
Correction of satellite radar altimetry of antarctic ice sheets [1996, eng] **F-55107**
First results of short pulse radio echo sounding on the top of Berkner Island [1995, eng] **F-56086**
Products of subglacial volcanic eruptions under different ice thicknesses [1994, eng] **E-54383**
Research on the glaciation of the Larsemann Hills, East Antarctica [1995, chi] **F-54578**
Topographic origin for double-ridge features in visible imagery of ice divides in Antarctica [1995, eng] **F-54067**
VARIATIONS
Antarctic ice sheet [1996, eng] **F-55087**
Antarctic marine microfossil transport during the Neogene [1996, eng] **E-55653**
Behavior of the East Antarctic ice sheet as deduced from a coupled GCM/ice-sheet model [1995, eng] **F-54974**
Cenozoic glaciation: the marine record established by ocean drilling [1992, eng] **E-56175**
Changes in the configuration of ice stream flow from the West Antarctic ice sheet [1996, eng] **F-54909**
Chronology of late Wisconsin ice retreat from the western Ross Sea, Antarctica [1996, eng] **E-54673**
Correction of satellite radar altimetry of antarctic ice sheets [1996, eng] **F-55107**
East Antarctic Ice Sheet development during the Middle Miocene climatic transition from 16 to 12 Ma [1993, eng] **F-56133**
Elastic response of the earth to interannual variations in antarctic precipitation [1995, eng] **F-54412**
Hydraulic run-away: a mechanism for thermally regulated surges of ice sheets [1995, eng] **F-54068**
Ice sheets [1993, eng] **F-55815**
Ice sheets, climate change and sea level [1996, eng] **F-54479**
Implications of Pleistocene diatom sediments for antarctic glaciation [1996, eng] **E-54674**
Inverse relation between ice extent and the late Paleozoic glacial record of Gondwana [1995, eng] **E-54059**
Long-term ice-sheet stability study in Ross Sea cores [1994, eng] **F-54102**
Low probability of east Antarctica Pliocene deglaciation [1996, eng] **E-55680**
Marine fossils and glacial history of raised beach deposits around Lützow-Holm Bay [1995, eng] **E-54632**
Mid to Late Holocene readvance of the Law Dome ice margin [1996, eng] **F-56285**
Neogene East Antarctic ice sheet: a dynamic or stable feature? [1995, eng] **F-55923**
Pliocene paleoclimate of Dry Valleys of Southern Victoria Land [1996, eng] **E-55681**
Polythermal model of the antarctic ice sheet [1996, eng] **F-55627**
Possible influence of glacial eustasy on antarctic shelf stratigraphy [1996, eng] **E-55055**
Research on the glaciation of the Larsemann Hills, East Antarctica [1995, chi] **F-54578**
Sedimentological data on cores from the Joides Basin [1995, eng] **E-54947**
Seismic survey of the Ross Sea continental shelf [1994, eng] **E-54276**
Southern Hemisphere climate and glacial history over the past 5 million years [1995, eng] **E-55997**
VOLUME
Chronology of late Wisconsin ice retreat from the western Ross Sea, Antarctica [1996, eng] **E-54673**
East Antarctic Ice Sheet development during the Middle Miocene climatic transition from 16 to 12 Ma [1993, eng] **F-56133**
Elastic response of the earth to interannual variations in antarctic precipitation [1995, eng] **F-54412**

Propagation of Pc1 magnetic bursts across the polar cap region [1992, eng] K-54210
Radio observation data at Syowa Station, Antarctica during 1994 [1996, eng] K-55370

Spectral deviations of HF signals in antarctic radio lines [1991, rus] K-54169
U.S. antarctic activities, 1993-1994 [1994, eng] A-54069
U.S. National Science Foundation's Geospace Environmental Modelling (GEM) Program, 1990-1995 [1992, eng] K-54205
Upper atmosphere physics at Showa Station in 1993 [1996, eng] K-55200
Upper atmosphere physics at Showa Station in 1994 [1996, eng] K-55201

ABSORPTION
Analysis of high-resolution mesospheric sodium twilight spectral emission profiles [1992, eng] K-54213

CURRENT SYSTEMS
Convection enhancement event observed with the Polar Patrol Balloon #4 [1996, eng] K-55372
First Dynasonde observations of F-region plasma flow at Halley, Antarctica [1995, eng] K-54117
Geomagnetic field daily variations at Zhongshan Station, 1991 [1995, chi] K-54598
Sources and velocities of Pc1-2 ULF waves at high latitudes [1995, eng] K-54976

D REGION
Electron concentration and meteorological parameters at Molodezhnaya [1995, eng] K-55767
Time constants of the D-region [1992, eng] K-54220

DIURNAL VARIATIONS
Maximum ionospheric electronic concentrations over King George I. and Concepción, Chile [1995, spa] K-54980
ULF modulation of ELF-VLF emissions close to the magnetospheric boundary [1994, eng] K-54396

ELECTRON DENSITY
16-beam phased-array radiowave imager for studies of cosmic noise absorption at U.S. AGO sites [1994, eng] K-55140
Antarctic polar cap total electron content at Casey Station [1992, eng] K-54216
Cyclotron absorption of whistler signals [1996, eng] K-55924
Diurnal and seasonal occurrence of polar patches [1996, eng] K-55520
Electron concentration and meteorological parameters at Molodezhnaya [1995, eng] K-55767
Initial results from the PENGUIN imaging riometer at AGO-P2 [1994, eng] K-55141
Ionisation below 55 km in the antarctic mesosphere [1992, eng] K-54219
Ionospheric tomography in Antarctica [1996, eng] K-55603
Ionospheric Trimpi events recorded at Kerguelen [1996, eng] K-55523
Maximum ionospheric electronic concentrations over King George I. and Concepción, Chile [1995, spa] K-54980
Maximum of VLF hiss occurrence in the postnoon sector at cusp latitudes [1996, chi] K-55879
Numerical simulation of whistler-triggered VLF emissions observed in Antarctica [1996, eng] K-54488
Polar cusp, plasma mantle particles and their relationships to polar rain [1996, eng] K-55373
Quasi periodic scintillation events at southern auroral latitudes [1992, eng] K-54217
VLF waves in the magnetosphere [1995, eng] K-55040
Wave-particle interactions [1996, eng] K-55689

F REGION
First Dynasonde observations of F-region plasma flow at Halley, Antarctica [1995, eng] K-54117
Maximum ionospheric electronic concentrations over King George I. and Concepción, Chile [1995, spa] K-54980

IONIZATION
Antarctic polar cap total electron content at Casey Station [1992, eng] K-54216
Atmospheric ionization detected by nitrate measurements in snow [1995, eng] K-56335
Diurnal and seasonal occurrence of polar patches [1996, eng] K-55520
Ionisation below 55 km in the antarctic mesosphere [1992, eng] K-54219
Ionospheric Trimpi events recorded at Kerguelen [1996, eng] K-55523
Semidiurnal tide oscillations of the antarctic lower thermosphere [1996, eng] K-56024

IRREGULARITIES
Ducted whistler-mode signals received at two widely spaced locations [1996, eng] K-55527
Evaluation of ionospheric inhomogeneities using reverse-oblique sounding [1991, rus] K-54168
Geomagnetic pulsation anomaly at Showa Station [1996, jpn] K-55586
Ionospheric Trimpi events recorded at Kerguelen [1996, eng] K-55523
Numerical simulation of whistler-triggered VLF emissions observed in Antarctica [1996, eng] K-54488
Quasi periodic scintillation events at southern auroral latitudes [1992, eng] K-54217
Radar studies of magnetosphere dynamics [1995, eng] K-55039
Relation of gamma-ray bursts to lighting [1996, eng] K-55218
Reverse signal parameters from the data of oblique sounding in the Antarctic [1995, eng] K-55156
Riometer absorption events at SANAE, L=4.0 [1995, eng] K-55038
Wave-particle interactions [1996, eng] K-55689

STORMS
Ionospheric disturbance caused by magnetospheric convection [1995, chi] K-54584
Ionospheric Trimpi events recorded at Kerguelen [1996, eng] K-55523

Isolation effects
Antarctic context [1994, eng] A-55859
Dream analysis of the Antarctic Walk [1995, eng] H-54924
Effects of prolonged isolation in extreme environments on stress, coping and depression [1995, eng] H-55934
Folk psychology of the winter experience in Antarctica [1994, eng] H-55151
Levels of anxiety aboard two expeditionary ships [1995, eng] H-55932
Proceedings of the conference “Living in Antarctica: Women in a Man's World” [1994, eng] A-55858
Psychological selection of wintering-over personnel [1994, eng] H-54876
Remote sites as analogs for lunar and Mars habitat pilot studies [1994, eng] A-55381
Selection of ANARE station leaders [1994, eng] H-54875
Sociocultural influences on psychosocial adjustment in Antarctica [1989, eng] H-55904
Some human resource strategies and experiences from the Australian mining industry [1994, eng] H-55864

Mammalia
Antarctic Conservation Act of 1978 [1989, eng] M-55053
Effects of small-mammal trapping on birds at Marion I. [1994, eng] B-54182
BLOOD AND CIRCULATION
Intracellular fatty acid-binding protein in antarctic and temperate-zone fishes [1994, eng] B-55059
EVOLUTION
Late Cretaceous to Early Tertiary land mammal biogeography [1996, eng] E-56113
EXPLOITATION
Marine mammal-fishery interaction in the southern ocean [1985, eng] B-56196
GEOGRAPHIC DISTRIBUTION
Cetaceans, seals and seabirds observed near the Antarctic Peninsula [1990, spa] B-55246
Late Cretaceous to Early Tertiary land mammal biogeography [1996, eng] E-56113
Vertebrate predators and their spatial association with krill [1994, eng] B-54701
NUTRITION
Biomass allocation in *Acaena magellanica* [1996, eng] B-55314
Krill oil inhibits murine lupus [1996, eng] B-55198
Marine mammal-fishery interaction in the southern ocean [1985, eng] B-56196
PATHOLOGY
Krill oil inhibits murine lupus [1996, eng] B-55198
PHYSIOLOGY
Biochemical aspects of the readaptation of an organism after a period spent in Antarctica [1993,] B-56038
Fatty acid-binding protein from antarctic icefish muscle [1995, eng] B-54187
POPULATION
Fall birds and mammals in the Amundsen and Bellingshausen Seas [1994, eng] B-54161
TAXONOMY
Late Cretaceous to Early Tertiary land mammal biogeography [1996, eng] E-56113

Mammalia—Cetacea
[Remembrance: William Nigel Bonner] [1995, eng] A-54757
BEHAVIOR
Behavior and dive times of Arnoux's beaked whales in fast ice [1996, eng] B-56112
Distribution of mtDNA in humpback whales [1995, eng] B-55195
BREEDING CYCLES AND REPRODUCTION
Morphology and biochemistry of frozen spermatozoa of male minke whales [1996, eng] B-55011
ECOLOGY
Behavior and dive times of Arnoux's beaked whales in fast ice [1996, eng] B-56112
EXPLOITATION
Newsletter, No.43, Dec. 1995 [1995, eng] A-55396
See [also]: Whaling
GEOGRAPHIC DISTRIBUTION
Distribution of mtDNA in humpback whales [1995, eng] B-55195
Occurrence of organic halogens in marine mammals [1995, eng] B-55062
MORPHOLOGY
Morphology and biochemistry of frozen spermatozoa of male minke whales [1996, eng] B-55011
Steroid hormones in female minke whales [1996, eng] B-55405
NUTRITION
Cephalopods as prey. III. Cetaceans [1996, eng] B-56093
PATHOLOGY
Stomach contents of a stranded whale [1995, eng] B-54756
PHYSIOLOGY
Behavior and dive times of Arnoux's beaked whales in fast ice [1996, eng] B-56112
Distribution of mtDNA in humpback whales [1995, eng] B-55195
Morphology and biochemistry of frozen spermatozoa of male minke whales [1996, eng] B-55011
Occurrence of organic halogens in marine mammals [1995, eng] B-55062
Steroid hormones in female minke whales [1996, eng] B-55405
POPULATION
Distribution of mtDNA in humpback whales [1995, eng] B-55195

Mammalia—Pinnipedia
[Remembrance: William Nigel Bonner] [1995, eng] A-54757
Pinnipeds and seabirds at South Shetland Is., summer 1993-1994 [1994, eng] B-54702
Report of the Workshop on Southern Elephant Seals [1991, eng] B-54732
BEHAVIOR
Barnacles on southern elephant seal skin [1995, eng] B-55013
Behavior of antarctic fur seal bulls at Cape Shirreff during the mating season [1995, spa] B-54984
Classification of Weddell seal diving behavior [1996, eng] B-55404
Diving behavior of female Weddell seals [1994, eng] B-55407
Diving development and survivorship in Weddell seal pups [1994, eng] B-54295
Diving of adult southern elephant seals from Marion I. [1994, eng] B-54178
Effects of TDRs on seal behavior [1995, eng] B-54481
Food and growth in fur seal pups [1996, eng] B-55197
Hormones and diving in Weddell seals [1995, eng] B-54303
Juvenile elephant seal moulting, Walker Bay, South Shetland Islands [1995, eng] B-55279
Molting southern elephant seals and weather conditions on Livingston I. [1994, eng] B-55581
Movements of southern elephant seals [1996, eng] B-56248
Myoglobin saturation in free-diving Weddell seals [1995, eng] B-54260
Relationship between foraging behaviour and energy expenditure in antarctic fur seals [1996, eng] B-55938
Speed and time during seals' foraging dives [1995, eng] B-55098
BLOOD AND CIRCULATION
Diving development and survivorship in Weddell seal pups [1994, eng] B-54295
Splenic contraction during seal diving [1996, eng] B-54954
Vitamin D in southern elephant seals [1996, eng] B-55442
BREEDING CYCLES AND REPRODUCTION
Antarctic fur seal diet during breeding, South Georgia [1996, eng] B-54467
Behavior of antarctic fur seal bulls at Cape Shirreff during the mating season [1995, spa] B-54984
Body composition changes in elephant seal mothers [1996, eng] B-55776
Diving of adult southern elephant seals from Marion I. [1994, eng] B-54178
Duration of pregnancy in fur seals [1996, eng] B-54901
Food and growth in fur seal pups [1996, eng] B-55197
Milk composition annual variation in antarctic fur seals [1995, eng] B-54114
Newborn southern elephant seal temperature [1995, eng] B-54755
Offspring sex ratio and female size in southern elephant seals [1994, eng] B-54391
Population changes of elephant seals on Kerguelen Is. during the past 30yr. [1985, eng] B-56197
Relationship between foraging behaviour and energy expenditure in antarctic fur seals [1996, eng] B-55938
Reproduction in the female subantarctic fur seal [1995, eng] B-54202
Southern elephant seal *(Mirounga leonina).* 2 [1996, eng] B-55187
Status of southern elephant seals at South Georgia [1996, eng] B-55593
Vitamin D in southern elephant seals [1996, eng] B-55442
ECOLOGY
Determination of energetics and physiology of penguins and seals [1995, eng] B-54892
Juvenile elephant seal moulting, Walker Bay, South Shetland Islands [1995, eng] B-55279
Molting southern elephant seals and weather conditions on Livingston I. [1994, eng] B-55581
Pack-ice seal activities, Feb.-Apr. 1994 [1994, eng] B-54162
Status of southern elephant seals at South Georgia [1996, eng] B-55593
EMBRYOLOGY
Offspring sex ratio and female size in southern elephant seals [1994, eng] B-54391
Reproduction in the female subantarctic fur seal [1995, eng] B-54202
EXPLOITATION
Population changes of elephant seals on Kerguelen Is. during the past 30yr. [1985, eng] B-56197
See [also]: Sealing
GEOGRAPHIC DISTRIBUTION
Antarctic fauna and some of its problems [1956, eng] B-55481

Distribution and numbers of fur seals on King George I. [1987, eng] B-56264

LOCOMOTION

Pioneering science on the frozen frontier [1995, eng] B-54441

MARKING

Aurora, Sep. 1995, Vol.15, No.1 [1995, eng] A-54265

Diving of adult southern elephant seals from Marion I. [1994, eng] B-54178

Implantable data logging system for estimation of metabolic rates in antarctic predators [1995, eng] B-54410

Movements of southern elephant seals [1996, eng] B-56248

MIGRATION

Distribution and numbers of fur seals on King George I. [1987, eng] B-56264

Movements of southern elephant seals [1996, eng] B-56248

MORPHOLOGY

Body composition changes in elephant seal mothers [1996, eng] B-55776

Offspring sex ratio and female size in southern elephant seals [1994, eng] B-54391

Reproduction in the female subantarctic fur seal [1995, eng] B-54202

Thoracic circumference and nitric oxide activity in the free-diving Weddell seal [1994, eng] B-54296

NUTRITION

Antarctic fur seal diet during breeding, South Georgia [1996, eng] B-54467

Cephalopods as prey. II. Seals [1996, eng] B-56092

Diet of southern elephant seals *(Mirounga leonina)* from Heard Island [1995, eng] B-54480

Differences between krill caught by predators and by net [1996, eng] B-56187

Diving of adult southern elephant seals from Marion I. [1994, eng] B-54178

Fish diet of the antarctic fur seal at Stranger Point [1996, eng] B-55336

Food and growth in fur seal pups [1996, eng] B-55197

Fur seal diet at South Georgia [1996, eng] B-55315

IgA in elephant seals' milk [1995, eng] B-54450

Seabird and seal consumption of subantarctic marine resources and consumer biomass changes 1962-1985 [1996, eng] B-54551

Speed and time during seals' foraging dives [1995, eng] B-55098

PHYSIOLOGY

Body composition changes in elephant seal mothers [1996, eng] B-55776

Body composition of antarctic fur seals [1996, eng] B-54261

Body condition and composition in female antarctic fur seals [1995, eng] B-54201

Determination of energetics and physiology of penguins and seals [1995, eng] B-54892

Diving development and survivorship in Weddell seal pups [1994, eng] B-54295

Food and growth in fur seal pups [1996, eng] B-55197

Hormones and diving in Weddell seals [1995, eng] B-54303

IgA in elephant seals' milk [1995, eng] B-54450

Implantable data logging system for estimation of metabolic rates in antarctic predators [1995, eng] B-54410

Milk composition annual variation in antarctic fur seals [1995, eng] B-54114

Molting southern elephant seals and weather conditions on Livingston I. [1994, eng] B-55581

Myoglobin saturation in free-diving Weddell seals [1995, eng] B-54260

Newborn southern elephant seal temperature [1995, eng] B-54755

Relationship between foraging behaviour and energy expenditure in antarctic fur seals [1996, eng] B-55938

Southern elephant seal *(Mirounga leonina).* 2 [1996, eng] B-55187

Speed and time during seals' foraging dives [1995, eng] B-55098

Splenic contraction during seal diving [1996, eng] B-54954

Thoracic circumference and nitric oxide activity in the free-diving Weddell seal [1994, eng] B-54296

Vitamin D in southern elephant seals [1996, eng] B-55442

POPULATION

Aurora, Dec. 1995, Vol.15, No.2 [1995, eng] A-54264

Biologic notes about Turret Point, King George Island, Antarctica [1990, eng] B-55346

Distribution and numbers of fur seals on King George I. [1987, eng] B-56264

Diving development and survivorship in Weddell seal pups [1994, eng] B-54295

Entanglement of seals at South Georgia [1995, eng] B-54816

Juvenile elephant seal moulting, Walker Bay, South Shetland Islands [1995, eng] B-55279

Molting southern elephant seals and weather conditions on Livingston I. [1994, eng] B-55581

Pack-ice seal activities, Feb.-Apr. 1994 [1994, eng] B-54162

Population changes of elephant seals on Kerguelen Is. during the past 30yr. [1985, eng] B-56197

Seabird and seal consumption of subantarctic marine resources and consumer biomass changes 1962-1985 [1996, eng] B-54551

Status of southern elephant seals at South Georgia [1996, eng] B-55593

Chemical variations between polar stratospheric cloud phases [1996, eng] **I-54485**
Chlorine monoxide in the antarctic spring vortex, pt.2 [1996, eng] **I-54401**
Climate and atmospheric tracers modelling with GCM, polar applications [1996, eng] **I-55833**
Climate reconstruction from water isotopes [1996, eng] **I-55915**
Climatic variations and forcing mechanisms of the last 2000 years [1996, eng] **I-55914**
Climatological wind reference model [1996, eng] **K-56170**
Cloud detection in satellite imagery over the South Pole [1994, eng] **I-54855**
Denitrification mechanisms in the polar stratospheres [1990, eng] **I-55439**
Development of the antarctic ozone hole [1996, eng] **I-56060**
DMS flux in the southern ocean [1996, eng] **I-55690**
Double jets in a two-level PE model [1995, eng] **I-56235**
Downwelling radiation flux at continental surfaces [1996, eng] **I-55093**
Effect of dynamical mixing in a simple model of the ozone hole [1996, eng] **I-55585**
Effect of volcanic aerosols on ultraviolet radiation in Antarctica [1996, eng] **I-54407**
Effects of snow ventilation on chemical concentrations [1996, eng] **F-55828**
Equilibrium constant for the reaction of $ClO + O_2 <-> ClO.O_2$ [1990, eng] **I-55031**
Evolution of the boundary layer over the southern ocean [1994, eng] **I-55065**
Formation of nitric acid hydrates—a chemical equilibrium approach [1990, eng] **I-55029**
Formation of polar stratospheric clouds on preactivated background aerosols [1996, eng] **I-55641**

Future chlorine-bromine loading and ozone depletion [1991, eng] **I-54314**
GCM response to an antarctic polynya [1995, eng] **I-54419**
GCM study of the climatic effect of 1979-1992 ozone trend [1995, eng] **I-54051**
Glacial circulation in atmospheric models [1996, ger] **J-55977**
Global climate model with 1°-resolution sea ice and ocean components [1995, eng] **F-56239**
Global operational monitoring of atmospheric ozone from space [1992, eng] **I-56132**
Global sea-ice—upper-ocean model: some preliminary results [1993, eng] **F-55054**
Growth of acidic polar stratospheric aerosols [1996, eng] **I-54898**
Heterogeneous interactions of aerosol radicals on simulated cloud ice surface [1996, eng] **I-54796**
Heterogeneous processes: laboratory, field, and modeling studies [1991, eng] **I-54311**
High latitude climate and remote sensing [1996, eng] **I-56307**
Ice sheets, climate change and sea level [1996, eng] **F-54479**
Initiation of a continental ice sheet in a global climate model (GENESIS) [1996, eng] **I-55949**
Interaction between atmospheric thermal tides and ozone anomalies [1996, eng] **I-55840**
Interaction between polar climate and global warming [1995, eng] **I-56238**
Interannual variations in antarctic precipitation related to El Niño-Southern Oscillation [1996, eng] **I-55952**
Intercomparison of simulated polar climates by global climate models [1995, eng] **I-56240**
Ionisation and solvation of stratospherically relevant molecules on ice films [1995, eng] **I-55437**
Kinetic measurements of the $ClO + O_3 \rightarrow ClOO + O_2$ reaction [1990, eng] **I-55028**
Longwave atmospheric radiation over Antarctica [1996, eng] **I-54559**
Low-level atmospheric jets over the western Weddell Sea [1995, eng] **I-56234**
Low-temperature photochemistry of submicrometer nitric acid and ammonium nitrate layers [1996, eng] **I-55698**
Maintenance of the last great ice sheets: a UGAMP GCM study [1996, eng] **F-55276**
Measurements and parameter estimation of clear air and sea echoes in MST radars [1995, eng] **I-55074**
Model study of polar stratospheric clouds, pt.1 [1996, eng] **I-55685**
Model study of polar stratospheric clouds, pt.2 [1996, eng] **I-55686**
Modeling and observational study of East Antarctic surface mass balance [1996, eng] **I-54400**
Modeling katabatic winds over West Antarctica [1995, eng] **I-56236**
Modeling of the coupled katabatic/ocean and ice systems of the Antarctic [1995, eng] **I-56228**
Modeling the coupled ocean—katabatic wind systems of the Antarctic [1994, eng] **I-54849**
Molecules on ice [1996, eng] **I-55067**
Nature and causes of Antarctic and Austrialian paleoclimatic changes [1992, eng] **A-55887**
Numerical analysis of atmospheric water cycle over Antarctica [1995, eng] **I-54119**
Numerical modeling of heterogeneous ozone depletion in polar stratospheric clouds [1994, eng] **I-54127**
Observational study of the springtime Siple Coast confluence zone [1995, eng] **I-56237**
Observations and model studies of episodic events over the south polar plateau [1994, eng] **I-55126**
Parameterization of surface albedo for sea ice and its snow cover [1996, eng] **F-55092**
Past 100 year instrumental record and long-term paleoclimatic reconstruction [1996, eng] **I-55920**
Photodissociation of condensed films of chlorine dioxide [1996, eng] **I-55696**
Preprints [1995, eng] **I-56212**
Pressure dependence of the reaction between ClO and OClO at 226K [1990, eng] **I-55032**
Radiative forcing of climate [1991, eng] **I-54313**
Reaction probabilities of $ClONO_2$ and N_2O_5 on polar stratospheric cloud materials [1991, eng] **I-54587**
Relationship between atmospheric circulation and antarctic ozone depletion [1996, eng] **I-54758**
Risk of sea level rise [1996, eng] **I-55903**
Role of droplet composition in polar stratospheric cloud freezing [1995, eng] **I-55078**
Simulated antarctic mesoscale processes and climate [1995, eng] **I-56230**
Simulated effects of dichlorine hexoxide on stratospheric ozone depletion [1995, eng] **I-54118**
Simulations of antarctic climate using a limited area model [1996, eng] **I-55951**
Solitary wave-turbulence interaction [1995, eng] **I-54669**
Solvation of hydrogen halides on the surface of ice [1995, eng] **I-55472**
Southern hemisphere climate system recovery from 'instantaneous' sea-ice removal [1996, eng] **I-56194**
Southern Hemisphere climate: comparing models with reality [1996, eng] **I-55355**
Spectroscopy of freezing mechanisms of sulfuric acid aerosols [1996, eng] **I-54797**
Sudden cessation of katabatic winds in Adélie Land, Antarctica [1996, eng] **I-56141**
Surface energy and mass balance at Halley, Antarctica during winter [1996, eng] **I-55953**
Surface fluxes and aerial measurements in antarctic climate studies [1995, ita] **I-54774**
Synoptic-scale cyclones and summer surface winds on Siple Coast [1994, eng] **I-54851**
Temperature inversion strength on the south polar plateau [1995, eng] **I-56224**
Time-dependent wave-packet studies on the sticking of HCl to an ice surface [1996, eng] **I-55045**
U.S. FROST: Data and Science Plan. Report from the U.S. Science FROST Workshop, 2 and 3 August 1993 [1993, eng] **I-54442**
Unsuitability of meteoritic and other nuclei for polar stratospheric cloud freezing [1996, eng] **I-55642**
Uptake of chlorine dioxide by model PSCs under stratospheric conditions [1996, eng] **I-54810**
Uptake of HBr on ice at polar atmospheric conditions [1995, eng] **I-54413**
UV absorption spectra of H_2O/HNO_3 films [1996, eng] **I-56042**
Weather forecasting for antarctic air and sea operations [1995, eng] **I-55285**
Wind and thermohaline circulations and the ACC [1996, eng] **J-55931**

Cephalopods and mesoscale oceanography at the Antarctic Polar Front [1996, eng] B-56184
Cephalopods as prey. I. Seabirds [1996, eng] B-56091
Falkland Islands squid fishery [1996, eng] A-55792
Report of the SC-CAMLR 14th meeting, 1995 [1995, eng] B-55470
Role of cephalopods in the world's oceans [1996, eng] B-56095
Size structure and spatial variation of the limpet *Nacella concinna* from King George I. [1995, eng] B-54985

GEOGRAPHIC DISTRIBUTION
Albatrosses feeding on squid as indicators of marine resources in Kerguelen waters [1995, eng] B-54651
Antarctic Bivalvia from 1984-1986 German cruises [1989, ger] B-55492
Ascidians collected in the Weddell Sea [1994, eng] B-56051
Biogeography of brachiopods from Marion and Prince Edward Is. [1994, eng] B-54177
Cephalopods and mesoscale oceanography at the Antarctic Polar Front [1996, eng] B-56184
Description of Zerotulidae fam. nov. (Littorinoidea) [1996, eng] B-56137
Dispersal of benthic invertebrates in the Scotia Arc by kelp rafting [1994, eng] B-54280
Distribution and adaptive brachial crown allometry in cephalopods from the Scotia Sea [1995, eng] B-55772
Do antarctic benthic invertebrates show an extended level of eurybathy? [1996, eng] B-54548
Four molluscan species from King George Island [1993, ger] B-54297
Gastropods and bivalves collected by JARE in East Antarctica [1996, eng] B-55457
Isotope ratios of O and C in brachiopods [1995, eng] B-55213
New data on subantarctic micromolluscs [1988, spa] B-56262
New ecological role for cephalopods at the APFZ [1995, eng] B-54054
Role as consumers [1996, eng] B-56090
Role of cephalopods in the world's oceans [1996, eng] B-56095
Signy Island, Antarctica nudibranch diet and distribution [1996, eng] B-56017
Synopsis of *Pareledone* and *Megaleledone* species, with description of 2 n.sp. from East Antarctica [1994, eng] B-55049
Thecosomata (Gastropoda) from the antarctic ocean [1993, spa] B-54506

MORPHOLOGY
Antarctic bivalve molluscs - Cuspidaria (*Cuspidariidae, Cuspidatiida, Bivalva*) [1993,] B-56035
Antarctic Bivalvia from 1984-1986 German cruises [1989, ger] B-55492
Ascidians collected in the Weddell Sea [1994, eng] B-56051
Beak length of arrow squids between Stewart and Auckland Is. [1996, eng] B-54730
Biogeography of brachiopods from Marion and Prince Edward Is. [1994, eng] B-54177
Description of Zerotulidae fam. nov. (Littorinoidea) [1996, eng] B-56137
Distribution and adaptive brachial crown allometry in cephalopods from the Scotia Sea [1995, eng] B-55772

Early Cambrian brachiopods from glacial erratics of King George I. [1996, eng] E-55906
Eocene brachiopods from La Meseta Formation of Seymour I. [1996, eng] E-55908
Epibiota and attachment substrata of deep-water brachiopods [1996, eng] B-55356
Gastropods and bivalves collected by JARE in East Antarctica [1996, eng] B-55457
New data on subantarctic micromolluscs [1988, spa] B-56262
Notaspidean *Polictenidia tomasi* n.gen and n.sp. from the Scotia Sea [1996, eng] B-54463
Role as consumers [1996, eng] B-56090
Size structure and spatial variation of the limpet *Nacella concinna* from King George I. [1995, eng] B-54985
Steroid metabolism in *Clione antarctica* [1996, eng] B-55402
Study of four South Georgia molluscs [1995, eng] B-54817
Synopsis of *Pareledone* and *Megaleledone* species, with description of 2 n.sp. from East Antarctica [1994, eng] B-55049
Thecosomata (Gastropoda) from the antarctic ocean [1993, spa] B-54506

NUTRITION
Cephalopods and mesoscale oceanography at the Antarctic Polar Front [1996, eng] B-56184
Chemical ecology of three antarctic gastropods [1994, eng] B-54283
Metabolism and feeding of the brachiopod *Liothyrella uva* [1996, eng] B-54862
New ecological role for cephalopods at the APFZ [1995, eng] B-54054
Ocean food web at King George Island [1996, ger] B-55818
Role as consumers [1996, eng] B-56090
Signy Island, Antarctica nudibranch diet and distribution [1996, eng] B-56017

PATHOLOGY
Baseline heavy metal concentrations in clams from Maxwell Bay [1996, eng] B-56300
Epibiota and attachment substrata of deep-water brachiopods [1996, eng] B-55356

PHYSIOLOGY
Baseline heavy metal concentrations in clams from Maxwell Bay [1996, eng] B-56300
Chemical ecology of three antarctic gastropods [1994, eng] B-54283
Glyceryl ester and diterpenoic acid from the skin of antarctic nudibranchs [1995, eng] B-54112
High cadmium content in organisms from Terra Nova Bay [1996, eng] B-55964
Isotope ratios of O and C in brachiopods [1995, eng] B-55213
Metabolism and feeding of the brachiopod *Liothyrella uva* [1996, eng] B-54862
Role as consumers [1996, eng] B-56090
Role of cephalopods in the world's oceans [1996, eng] B-56095
Steroid metabolism in *Clione antarctica* [1996, eng] B-55402

POPULATION
Albatrosses feeding on squid as indicators of marine resources in Kerguelen waters [1995, eng] B-54651
Antarctic Bivalvia from 1984-1986 German cruises [1989, ger] B-55492
Cephalopods and mesoscale oceanography at the Antarctic Polar Front [1996, eng] B-56184
Cephalopods as prey. I. Seabirds [1996, eng] B-56091
Distribution and adaptive brachial crown allometry in cephalopods from the Scotia Sea [1995, eng] B-55772
Mollusc population dynamics on the antarctic shelf ocean bottom [1993, eng] B-54460
New ecological role for cephalopods at the APFZ [1995, eng] B-54054
Pliocene extinction of antarctic pectinid mollusks [1996, eng] E-55069
Size structure and spatial variation of the limpet *Nacella concinna* from King George I. [1995, eng] B-54985

TAXONOMY
Antarctic bivalve molluscs - Cuspidaria (*Cuspidariidae, Cuspidatiida, Bivalva*) [1993,] B-56035
Ascidians collected in the Weddell Sea [1994, eng] B-56051
Biogeography of brachiopods from Marion and Prince Edward Is. [1994, eng] B-54177
Description of Zerotulidae fam. nov. (Littorinoidea) [1996, eng] B-56137
Early Cambrian brachiopods from glacial erratics of King George I. [1996, eng] E-55906
Eocene brachiopods from La Meseta Formation of Seymour I. [1996, eng] E-55908
Four molluscan species from King George Island [1993, ger] B-54297
New data on subantarctic micromolluscs [1988, spa] B-56262
Notaspidean *Polictenidia tomasi* n.gen and n.sp. from the Scotia Sea [1996, eng] B-54463
Study of four South Georgia molluscs [1995, eng] B-54817
Synopsis of *Pareledone* and *Megaleledone* species, with description of 2 n.sp. from East Antarctica [1994, eng] B-55049

CIRCULATION
Abyssal antarctic circulation model [1996, eng] **J-55398**
Antarctic Circumpolar Current as a waveguide for Rossby waves [1996, eng] **J-55684**
Atlantic thermohaline circulation inferred [1996, eng] **J-54454**
Atmosphere-surface interactions over polar oceans and heterogeneous surfaces [1995, eng] **J-54762**
Barotropic model of the Antarctic Circumpolar Current [1996, eng] **J-55996**
Carbon tetrachloride as tracer of Weddell Sea bottom waters [1996, eng] **J-56019**
Changes in Antarctic Bottom Water properties in the western South Atlantic in the late 1980s [1996, eng] **J-55171**
Clay mineral distribution in antarctic oceanic surface sediments [1996, eng] **J-55079**
Comparison of South Atlantic Ocean circulation models [1996, eng] **J-54346**
Cosmonaut polynya in the southern ocean: structure and variability [1996, eng] **F-56122**
Current structure of the south Indian Ocean [1996, eng] **J-54888**
Deep water distillation [1996, eng] **J-55112**
Deployment of oceanographic-glaciological strings under the Filchner-Ronne-Schelfeis in 1995 [1995, eng] **F-56078**
Depth-integrated vorticity budget of the southern ocean from a general circulation model [1995, eng] **J-54236**
Diatom constraints on Pliocene antarctic oceanic fronts [1996, eng] **I-55677**
Distribution of surface zooplankton and seabirds across the southern ocean [1996, eng] **B-55189**
Disturbances in the thermohaline structure of the near-surface ocean layer in the wake of an iceberg [1995, rus] **J-54818**
Dynamics of the Antarctic Circumpolar Current [1996, eng] **J-55115**
East Antarctic Ice Sheet development during the Middle Miocene climatic transition from 16 to 12 Ma [1993, eng] **F-56133**
Freezing driven upwelling in antarctic sea ice biological systems [1996, eng] **B-55448**
Geostrophic circulation and satellite tracked buoys in the Bellingshausen Sea [1990, eng] **J-55945**
Glacial circulation in atmospheric models [1996, ger] **J-55977**
Global ocean circulation and heat fluxes [1996, eng] **J-55644**
Heat transport by large-scale antarctic geostrophic currents [1996, eng] **J-56039**
Hemispheric climate relations revealed by bottom sediment/ice core correlations [1996, eng] **I-55683**
High resolution observations of Weddell Sea surface currents using ERS-1 SAR sea-ice motion vectors [1995, eng] **F-54062**
Ice-ocean interactions in front of Filchner-Ronne Ice Shelf [1995, eng] **F-56064**
Interaction between ice-shelf cavities and the open ocean [1995, eng] **F-56067**
Interocean exchange of GNAIW and subantarctic Cd/Ca and carbon isotope measurements [1996, eng] **J-55607**
Large-scale circulation and its variability in the south Indian Ocean from TOPEX/POSEIDON altimetry [1995, eng] **J-54307**
Late Eocene-Oligocene paleoceanography in the southern Indian Ocean (ODP Site 744) [1996, eng] **J-55056**
Mesoscale tracer transports [1995, eng] **J-55673**
Mixing of AABW in the mid-Atlantic [1996, eng] **J-54453**
Modeling of the coupled katabatic/ocean and ice systems of the Antarctic [1995, eng] **I-56228**
Modeling the oceanic general circulation [1996, eng] **J-55155**
New Zealand Oligocene sedimentary evidence of initiation of Antarctic Circumpolar Current [1996, eng] **J-54655**
Numerical modeling of the world ocean circulation with the upper mixed-layer parametrization [1992, rus] **J-55468**
Ocean circulation variations associated with the Antarctic Circumpolar Wave [1996, eng] **J-56020**
Ocean load tides at the South Pole [1995, eng] **J-54815**
Ocean thermohaline circulations compared [1996, eng] **J-55113**
Oceanographic expedition to the Amundsen and Bellingshausen Seas [1994, eng] **J-54157**
On the obscurantist physics of "form drag" in theorizing about the Circumpolar Current [1994, eng] **J-56120**
On the representation of sea ice in global ocean general circulation models [1996, eng] **F-56121**
On the temporal variability of the transport through Drake Passage [1996, eng] **J-56046**
Organic carbon transport from subantarctic frontal zones [1995, eng] **J-55196**
Oxygen-minimum layer in waters around the South Shetland Is. and Ardley I. in summer [1989, chi] **J-55722**
Paleoceanographic analyses of Pleistocene climatic variability [1996, eng] **J-56047**
Palmer ecological research program [1995, eng] **A-55436**
Project 7: circulation, heat transport and sea ice changes in the southern ocean [1992, eng] **A-55888**
Radiolaria in surface sediments off the northwest Antarctic Peninsula [1989, chi] **B-55745**
Recent climate variability in the vicinity of the Antarctic Peninsula [1994, eng] **I-54392**
Rosame: sea-level observation network in antarctic and subantarctic areas [1996, fre] **J-56342**
Seasonal simulation of the southern ocean coupled ice-ocean system [1995, eng] **J-54130**
Sketch of hydrographic structure and circulation in the waters near Wilkes Land, Antarctica [1989, chi] **J-55708**
Southern ocean circulation variations simulated by an antarctic water mass model [1996, eng] **J-54889**
Southern ocean oceanography and models [1994, eng] **J-55872**
Southern ocean Pleistocene water mass circulation variations [1996, eng] **J-54458**
Southwest Pacific paleoceanography and development of the East Antarctic Ice Sheet [1995, eng] **J-54267**
Spreading of lower circumpolar deep water in the Atlantic Ocean [1995, eng] **J-54306**
Status of a Weddell Sea foraminifer [1996, ger] **B-54681**
Study of antarctic pack ice [1995, eng] **F-55114**
Study of the surface circulation to the north of Bransfield Strait, Antarctica [1992, spa] **J-55694**
Surface water circulation in krill fishing areas near the South Shetland Islands [1996, eng] **J-56104**
Topographic preconditions of open-ocean deep convection [1994, eng] **J-56119**
Turbulent oceanic heat flux during winter in the central Weddell Sea [1995, eng] **J-56229**
Use of seabirds to monitor sea-surface temperatures [1995, eng] **J-54200**
Water masses and circulation around the South Shetland Islands in summer [1989, chi] **J-55706**
Weddell Sea ice drift: kinematics and wind forcing [1996, eng] **F-56139**

Wind and thermohaline circulations and the ACC [1996, eng] **J-55931**
Wind-induced circulation in the Bransfield Strait from ERS-1/WSC data [1994, eng] **J-55780**
CURRENTS
Antarctic Circumpolar Current as a waveguide for Rossby waves [1996, eng] **J-55684**
Antarctic circumpolar wave in surface pressure, wind, temperature and sea-ice extent [1996, eng] **I-54822**
Antarctic ice sheet melting in the southeast Pacific [1996, eng] **F-55217**
Antarctic oceanic seasonal variations in Lützow-Holm Bay [1996, eng] **J-56044**
Atmosphere/sea ice interaction in global climate models: a review [1994, eng] **F-55869**
Atmospheric and oceanic forcing of Weddell Sea ice motion [1996, eng] **F-56045**
Barotropic model of the Antarctic Circumpolar Current [1996, eng] **J-55996**
Biogenic implications of Ross Sea particle transport [1996, eng] **J-56125**
Bottom pressure correlations in the south Atlantic [1996, eng] **J-56009**
Clay mineral distribution in antarctic oceanic surface sediments [1996, eng] **J-55079**
Comparison of South Atlantic Ocean circulation models [1996, eng] **J-54346**
Current structure of the south Indian Ocean [1996, eng] **J-54888**
Dating of Atlantic Ocean Quaternary marine sediment redistribution [1996, eng] **J-56293**
Deep-sea foraminifera in the South Atlantic Ocean: ecology and assemblage generation [1995, eng] **B-55108**
Depth-integrated vorticity budget of the southern ocean from a general circulation model [1995, eng] **J-54236**
Dissolved oxygen saturation in waters studied during the “Antártida 86 11” expedition [1990, spa] **J-55234**
Dynamics of the Antarctic Circumpolar Current [1996, eng] **J-55115**
Euphausiid larvae in the Antarctic Circumpolar Current-Weddell Sea Confluence Zone in winter [1992, rus] **B-55467**
Euphausiid larvae in the eastern Weddell Gyre [1992, rus] **B-55466**
Geochemistry in an area recently uncovered from the Filchner Ice Shelf [1996, eng] **J-55854**
Geochemistry of ACC sediments [1996, eng] **J-54787**
Geostrophic circulation and satellite tracked buoys in the Bellingshausen Sea [1990, eng] **J-55945**
Gravity flows as sediment transport systems in Admiralty Bay [1996, eng] **E-54768**
Heat fluxes across the ACC in the Drake Passage and Scotia Sea [1996, eng] **J-56282**
Heat transport by large-scale antarctic geostrophic currents [1996, eng] **J-56039**
High resolution observations of Weddell Sea surface currents using ERS-1 SAR sea-ice motion vectors [1995, eng] **F-54062**
Hydrography of Admiralty Bay in the summer of 1988-1989 [1990, spa] **J-55233**
Interocean exchange of GNAIW and subantarctic Cd/Ca and carbon isotope measurements [1996, eng] **J-55607**
Isotope analysis of Weddell Sea sediment stratigraphy and paleoproductivity [1995, eng] **J-54299**
Large-scale circulation and its variability in the south Indian Ocean from TOPEX/POSEIDON altimetry [1995, eng] **J-54307**
Macrozooplankton distribution, SW Atlantic [1995, eng] **B-55194**
Modeling the coupled ocean—katabatic wind systems of the Antarctic [1994, eng] **I-54849**

Chlorine budget of the lower polar stratosphere [1995, eng] **I-54414**
Chlorine monoxide in the antarctic spring vortex, pt.2 [1996, eng] **I-54401**
CLAES ozone validation measurements [1996, eng] **I-56154**
Comparison of antarctic ozone sounding techniques [1996, eng] **I-56210**
Concurrent ozone and temperature trends derived from ozonesonde stations [1995, eng] **I-54050**
Decadal evolution of the antarctic ozone hole [1996, eng] **I-55168**
Development of the antarctic ozone hole [1996, eng] **I-56060**
Direct measurements of atmospheric ozone at Zhongshan Station, Antarctica [1996, chi] **I-55328**
Dynamical influences on the antarctic ozone hole [1996, eng] **I-55693**
Effect of dynamical mixing in a simple model of the ozone hole [1996, eng] **I-55585**
Effect of volcanic aerosols on ultraviolet radiation in Antarctica [1996, eng] **I-54407**
Equilibrium constant for the reaction of ClO + O_2 <-> ClO.O_2 [1990, eng] **I-55031**
Formation of nitric acid hydrates—a chemical equilibrium approach [1990, eng] **I-55029**
Frozen clouds accelerate ozone destruction [1996, eng] **I-56317**
Future chlorine-bromine loading and ozone depletion [1991, eng] **I-54314**
GCM study of the climatic effect of 1979-1992 ozone trend [1995, eng] **I-54051**
Global change in aerosols and PSCs [1989, eng] **I-55850**
Global operational monitoring of atmospheric ozone from space [1992, eng] **I-56132**
Global ozone evolution [1989, eng] **I-55848**
Global progress on problems of ozone depletion [1993, eng] **I-55987**
Ground-based aerosol measurements at Arrival Heights, Antarctica [1996, eng] **I-55697**
Ground-based observations of the ozone hole in Antarctica [1995, eng] **I-54775**
HALOE ozone channel validation [1996, eng] **K-56166**
HCl molecules and ice interaction in polar stratosphere [1995, eng] **I-56176**
HCl on stratospheric ice [1996, eng] **I-55068**
Heterogeneous processes: laboratory, field, and modeling studies [1991, eng] **I-54311**
High-resolution ultraviolet spectral irradiance monitoring in polar regions [1994, eng] **I-54834**
Infrared balloon-borne ground-based and laboratory spectra [1989, eng] **I-55846**
Interaction between atmospheric thermal tides and ozone anomalies [1996, eng] **I-55840**
ISAMS ozone measurements [1996, eng] **K-56157**
Kinetic measurements of the ClO + $O_3 \rightarrow$ ClOO + O_2 reaction [1990, eng] **I-55028**
Low-temperature photochemistry of submicrometer nitric acid and ammonium nitrate layers [1996, eng] **I-55698**
McMurdo, Antarctica atmospheric aerosol measurements, 1994 [1996, eng] **I-56061**
Mending the ozone hole: science, technology, and policy [1995, eng] **I-54232**
Meteor-3/TOMS observations of the 1994 ozone hole [1995, eng] **I-54415**
Meteorological conditions of the antarctic ozone hole [1990, spa] **I-55251**
Meteorological data at Showa Station, 1994 [1995, eng] **I-54269**
Meteorological observations at Showa Station by JARE-33 in 1992 [1995, jpn] **I-54999**
Model study of polar stratospheric clouds, pt.2 [1996, eng] **I-55686**
Modification of the ozone layer by human activities in polar regions [1994, spa] **I-55779**
Molecules on ice [1996, eng] **I-55067**
Neumayer weather data: 1992, 1993, 1994 [1996, eng] **I-54786**
Newsletter, No.44, Mar. 1996 [1996, eng] A-55397
Numerical modeling of heterogeneous ozone depletion in polar stratospheric clouds [1994, eng] **I-54127**
Observation of a new absorption band of HOBr and its atmospheric implications [1996, eng] **I-54759**
Observational studies of the role of polar regions in mid-latitude ozone loss [1995, eng] **I-54417**
Our changing atmosphere [1989, eng] **I-55845**
Overview of UARS ozone validation measurements [1996, eng] **K-56168**
Ozone and NO_2 observations within the antarctic polar vortex [1990, spa] **I-55250**
Ozone and temperature trends [1991, eng] **I-54310**
Ozone diplomacy: new directions in safeguarding the planet [1991, eng] A-55024
Ozone hole [1996, eng] **I-55089**
Ozone hole and the 1995 Nobel Prize in chemistry [1996, fre] **I-55426**
Ozone in northern Europe and in Antarctica, 1987-1990 [1992, eng] **I-55192**
Ozone layer concentration over the Weddell Sea [1995, eng] **I-55584**
Ozone layer: the road not taken [1996, eng] **I-55122**
Ozone observations on Antarctic Peninsula [1993, spa] **I-54518**
Ozone saga, the GOME experiment and the Nobel story... [1996, eng] **I-56312**
Photodissociation of condensed films of chlorine dioxide [1996, eng] **I-55696**
Planetary waves in total ozone and their relation to antarctic ozone depletion [1995, eng] **I-54975**
Polar Ozone and Aerosol Measurement instrument [1996, eng] **I-55350**

Polar stratospheric clouds observed by lidar at McMurdo Station during the 1993 winter [1994, eng] **I-54831**
Possible influence of long-term SST-anomalies on the eddy ozone transport [1989, eng] **I-55849**
Potential cutaneous effects of stratospheric ozone depletion [1996, eng] **I-56333**
Preface to the UARS experiment [1996, eng] **A-56149**
Pressure dependence of the reaction between ClO and OClO at 226K [1990, eng] **I-55032**
Radiation and ozone data at Zhongshan and Great Wall stations, 1993-1994 [1995, eng] **I-55422**
Radiative forcing of climate [1991, eng] **I-54313**
Recent climate anomalies and their impact on snow chemistry at South Pole, 1987-1994 [1996, eng] **I-56211**
Record low ozone at McMurdo Station in spring of 1993 [1994, eng] **I-54830**
Recovery of antarctic ozone hole [1996, eng] **I-56332**
Refractive index and density of vapor-deposited ice [1995, eng] **I-54418**
Relationship between atmospheric circulation and antarctic ozone depletion [1996, eng] **I-54758**
Role of the Antarctic in global change [1993, eng] **F-56003**
Satellites for monitoring climate change [1994, eng] **I-55066**
SCAR report No.11, Feb. 1996 [1996, eng] **I-55365**
Simulated effects of dichlorine hexoxide on stratospheric ozone depletion [1995, eng] **I-54118**
Solvation of hydrogen halides on the surface of ice [1995, eng] **I-55472**
Sounding of polar stratospheric ozone annual variations [1995, eng] **I-55043**
Sounding of polar stratospheric ozone structure [1996, eng] **I-56010**
Source gases: concentrations, emissions, and trends [1991, eng] **I-54309**
Space data from scientific projects [1991, eng] **I-54791**
Spectrometry of atmospheric emission over the South Pole [1996, eng] **I-54905**
Spectroscopy of antarctic stratospheric ozone variations, pt.2 [1996, eng] **I-54906**
Spectroscopy of stratospheric trace gases at the South Pole [1994, eng] **I-54832**
Statistical seasonal analysis of winter decreases in ozone at Macquarie Island [1994, eng] **I-54194**
Stratospheric ozone and nitrogen dioxide at the poles [1989, eng] **I-55847**
Stratospheric ozone depletion [1993, eng] **I-55812**
Stratospheric polar vortex and sub-vortex: fluid dynamics and midlatitude ozone loss [1995, eng] **I-55153**
Stratospheric processes: observations and interpretation [1991, eng] **I-54312**
Ultraviolet and visible solar irradiance at the Weddell-Scotia Confluence, spring 1993 [1994, eng] **I-54840**
Ultraviolet inhibition of carbon fixation in phytoplankton [1994, eng] **B-54841**
Ultraviolet radiation changes [1991, eng] **I-54315**
Ultraviolet radiation effects on phytoplankton during ozone depletion [1994, eng] **B-54835**
Ultraviolet radiation in the southern seas in early spring 1993 [1994, eng] **F-54833**
Ultraviolet-B radiation and photosystem II activity in antarctic ice algae [1995, eng] **B-54241**
Upper Atmosphere Research Satellite (UARS) Microwave Limb Sounder (MLS) experiment [1992, eng] **I-54546**
UV radiation and photosynthesis in the Bellingshausen Sea [1993, eng] **B-55099**
Validation of NOAA-9 SBUV/2 total ozone measurements during the 1994 antarctic ozone hole [1996, eng] **I-56023**
Validation of UARS MLS ozone measurements [1996, eng] **K-56160**
Year-round column ozone observations at 65°S: validation and polar winter data [1995, eng] **I-54500**

Pack ice
Contribution of fast-ice algae to the spring phytoplankton bloom in Ellis Fjord [1996, eng] **B-55191**
Freezing driven upwelling in antarctic sea ice biological systems [1996, eng] **B-55448**
Marginal ice zone [1994, eng] **F-55873**
Occurrence of net phytoplankton between Elephant I. and the southern passages [1989, pol] **B-54369**
Physical controls on antarctic sea ice ecosystems [1994, eng] **B-55870**
Sea ice thickness observations from East Antarctica [1994, eng] **F-56005**
Summer phytoplankton bloom under fast ice around Showa Station [1996, eng] **B-55454**
CHEMISTRY
Carbon acquisition and growth of antarctic sea ice diatoms in closed bottle incubations [1996, eng] **B-55215**
Organic compounds in antarctic sea-water and pack-ice [1995, eng] **J-55891**
DEFORMATION
Small-scale structure of internal stresses in consolidated ice cover [1995, eng] **F-56173**
Stresses in sea ice in the neighboring force interaction zone [1995, eng] **F-55228**
DESTRUCTION
Macroalgal community ecosystems in Potter Cove, Antarctica [1996, eng] **B-56290**
DISTRIBUTION
Effects of pack ice on Weddell Sea plankton distribution [1995, eng] **B-54809**
DRIFTING
Antarctic Zone Flux Experiment [1996, eng] **J-55941**
High resolution observations of Weddell Sea surface currents using ERS-1 SAR sea-ice motion vectors [1995, eng] **F-54062**
Sea ice in the global climate system: requirements for an ocean observing system [1995, eng] **I-54858**
Study of antarctic pack ice [1995, eng] **F-55114**
POLLUTION
Organic compounds in antarctic sea-water and pack-ice [1995, eng] **J-55891**
STRUCTURE
Small-scale structure of internal stresses in consolidated ice cover [1995, eng] **F-56173**
VARIATIONS
Cosmonaut polynya in the southern ocean: structure and variability [1996, eng] **F-56122**

Paleobotany
Anatomically preserved Permian *Noeggerathiopsis* leaves from east Antarctica [1996, eng] **E-55654**
Atmospheric CO_2 in peat [1994, eng] **I-54656**
Biofacies and biostratigraphic constraints on regression in the Fossil Bluff Group, Alexander I. [1993, eng] **E-55561**
Climatic variations and forcing mechanisms of the last 2000 years [1996, eng] **I-55914**
Comparison of Cretaceous and Cenozoic history of vegetation and climate in high latitudes [1995, eng] **E-55975**
Comparison of investigations carried out in Antarctica and Greenland [1994, ita] A-54332
Diatom preservation comparison in oxic and anoxic basins [1995, eng] **B-55777**
Dinosaur assemblage from the Transantarctic Mountains [1994, eng] **E-54085**
Early Createceaous angiosperm leaves [1996, eng] **E-55102**
Early palynostratigraphy of the Heimefront Range [1995, eng] **E-54301**
Enigmatic gymnosperms? Structurally preserved Permian and Triassic seed ferns from Antarctica [1996, eng] **E-54760**
Eocene plant and fish assemblages from La Meseta Formation, Seymour I. [1996, eng] **E-55911**
Evolution of Ace Lake, Antarctica, determined from sedimentary diatom assemblages [1996, eng] **E-55921**
Fern thickets from the Cretaceous of Alexander I. [1996, eng] **E-55159**
Fossil plant remains from Dufayel I. [1986, eng] **E-56308**
Geology of Upper Cretaceous samples from Seymour I. [1993, spa] **E-54519**
Grapnelispora evansii, Late Cretaceous megaspore from Argentina and Antarctica [1988, spa] **E-56305**
Holocene environmental change in a sediment sequence from King George I. [1996, eng] **E-56276**
Implications of Pleistocene diatom sediments for antarctic glaciation [1996, eng] **E-54674**
Late Cambrian trilobites from the Marine Group, northern Victoria Land, Antarctica [1984, eng] **E-55838**
Macroscopic plant remains from Upper Cretaceous and Tertiary of King George I. [1993, pol] **E-55514**
Middle Eocene dinocysts from Bruce Bank, Scotia Sea [1995, eng] **E-54188**
Morphometric and paleobiogeographic analyses of *Dicroidium* from the Triassic of Gondwana [1995, eng] **E-56336**
New cycad leaf related to Patagonian geology [1995, eng] **E-54300**
New dinoflagellate genus trom the antarctic Lower Tertiary [1982, eng] **B-56297**
Palaeoecology of a cushion bog, southern Tierra del Fuego [1995, eng] **E-54302**

Paleoclimate from diatom distribution in a marine core [1989, chi] **E-55747**
Paleoenvironmental import of Antarctic Peninsula palynological patterns [1996, eng] **E-55042**
Permo-Triassic sedimentation within the Lambert Graben, Prince Charles Mountains [1993, eng] **E-55558**
Polymorphism in a pteridospermous frond from the Jurassic [1993, eng] **E-54380**
Reappraisal of the Triassic flora from Williams Point [1995, eng] **E-54978**
Significance of Snow Island flora [1995, eng] **E-54814**
Transantarctic Mountains fossil climatic implications [1996, eng] **E-56015**
Triassic seed fern cupules from Antarctica [1994, eng] **E-54084**
Unusual plant organ from the Triassic of Antarctica [1994, eng] **E-54083**
Wound response in antarctic fossil trees and paleoenvironment [1996, eng] **E-54968**

Paleoceanography
135,000-year Vostok SPECMAP common temporal framework [1993, eng] **I-54352**
Cenozoic glaciation: the marine record established by ocean drilling [1992, eng] **E-56175**
Dating of Atlantic Ocean Quaternary marine sediment redistribution [1996, eng] **J-56293**

Leslie depletion model for abundance assessment of the Patagonian toothfish [1996, eng] **B-56099**
Report of the SC-CAMLR 14th meeting, 1995 [1995, eng] **B-55470**
Seabird interaction with longlining operations for fish around South Georgia, 1994 [1995, eng] **B-54433**
Seabird interaction with trawl and longline fisheries [1996, eng] **A-56101**
Spawning, hatching and growth of *Champsocephalus gunnari* around the Kerguelen Is. [1995, eng] **B-54427**

GEOGRAPHIC DISTRIBUTION

Antarctic fauna and some of its problems [1956, eng] **B-55481**
Distribution, abundance and biology of *Patagonotothen brevicauda guntheri* from the Shag Rocks [1990, spa] **B-55237**
Fish distribution and biomass in the Heard I. zone [1995, eng] **B-54426**
Fish taken during the "Antártida 86 11" expedition [1990, spa] **B-55235**
Fishes of the Tristan da Cunha group and Gough Island, South Atlantic Ocean [1995, eng] **B-55310**
Glycoprotein antifreeze in *Notothenia coriiceps* from Marion I. [1994, eng] **B-54175**
Karyotypes of the species *Harpagifer* from the South Orkneys and Macquarie I. [1996, eng] **B-56055**
Observations of the shortsnout lancetfish at Marion I. [1994, eng] **B-54183**
Structure of borel from the South Georgia and South Shetlands region [1989, pol] **B-54371**

LOCOMOTION

Locomotory activity and behaviour of the antarctie teleost *Notothenia coriiceps* [1996, eng] **B-55885**

MARKING

Age determination in *Notothenia coriiceps* from Potter Cove [1996, eng] **B-56334**
Studies of age marking in *Parachaenichthys georgianus* (Pisces, Bathydraconidae) from the South Georgia region [1989, pol] **B-54372**

MORPHOLOGY

Age and growth of *Notothenia gibberifrons* Lönnberg 1905 at South Georgia [1990, spa] **B-55236**
Age and growth of *Trematomus bernacchii* from Terra Nova Bay [1996, eng] **B-54469**
Age determination in *Notothenia coriiceps* from Potter Cove [1996, eng] **B-56334**
Antarctic fish retina. Histological variations under continuous darkness [1990, eng] **B-55343**
Cold adaptation in some antarctic fishes [1995, eng] **B-54784**
Distribution, abundance and biology of *Patagonotothen brevicauda guntheri* from the Shag Rocks [1990, spa] **B-55237**
Dynamic instability of microtubules from antarctic fishes [1994, eng] **B-54288**
Egg-shell distribution and abundance, and egg-shell morphology, of antarctic fish at South Georgia [1996, eng] **B-55597**
EM of the fish tectum [1996, eng] **B-54785**
Eocene plant and fish assemblages from La Meseta Formation, Seymour I. [1996, eng] **E-55911**
Feeding physiology of some antarctic fishes [1996, eng] **B-55926**
Fish taken during the "Antártida 86 11" expedition [1990, spa] **B-55235**
Fishes of the Tristan da Cunha group and Gough Island, South Atlantic Ocean [1995, eng] **B-55310**
Fur seal diet at South Georgia [1996, eng] **B-55315**
Heart of the icefish: bioconstruction and adaptation [1995, eng] **B-54891**
Histology of ovarian development of *Champsocephalus gunnari* from South Geogia [1995, eng] **B-54428**
Length frequency analysis of antarctic fish species [1995, eng] **B-55503**
Na^+/K^+-ATPase in antarctic fish [1995, eng] **B-54910**
Observations of the shortsnout lancetfish at Marion I. [1994, eng] **B-54183**
Occurrence of a copepod parasite on the fish *Champsocephalus gunnari* [1993, eng] **B-54142**
Splenic control in an antarctic fish [1996, eng] **B-55096**
Structure of borel from the South Georgia and South Shetlands region [1989, pol] **B-54371**
Studies of age marking in *Parachaenichthys georgianus* (Pisces, Bathydraconidae) from the South Georgia region [1989, pol] **B-54372**
Systematics and phylogeny of antarctic dragonfishes (Bathydraconidae, Notothenioidei, Perciformes) [1995, eng] **B-55162**

NUTRITION

Benthos and fish associated with submerged drifting algae in Fildes Bay [1996, eng] **B-55460**
Cephalopods as prey. IV. Fishes [1996, eng] **B-56094**
Feeding behavior in 3 species of Artedidraconidae fish [1996, eng] **B-55458**
Feeding incidence and yolk resorption in larval fishes [1994, eng] **B-54289**
Feeding physiology of some antarctic fishes [1996, eng] **B-55926**
Fishes from the Davis Sea and Prydz Bay (AzCherNIRO expeditions in 1978 and 1983) [1990, rus] **B-56309**
Food web of juvenile antarctic fish [1995, eng] **B-54564**
Ocean food web at King George Island [1996, ger] **B-55818**
Prey composition and daily rations of myctophid fishes in the southern ocean [1996, eng] **B-55280**
Tropic role of myctophids in the southern ocean ecosystem [1995, eng] **B-54430**

PATHOLOGY

Acanthocephalan infection of inshore fishes at the South Orkney Islands [1996, eng] **B-55598**
Aspects of the ecology of metazoan ectoparasites of marine fishes [1995, eng] **B-54189**
Description of *Lecithochirium whitei* n.sp. from the fish *Bathylagus antarcticus* [1994, eng] **B-55002**
Development of the parasite *Eubrachiella antarctica* [1993, eng] **B-54141**
Fish infection by Digenea off Heard Island [1996, eng] **B-55789**
Morphology and occurrence of a parasitic nematode in antarctic and subantarctic fishes [1996, eng] **B-55526**
New records of fish infection off Heard Island [1996, eng] **B-55788**
Occurrence of a copepod parasite on the fish *Champsocephalus gunnari* [1993, eng] **B-54142**
Organochlorine compounds in fish off the Antarctic Peninsula [1996, eng] **B-56057**
Systemic status of a copepod parasite of antarctic teleosts [1996, eng] **B-55455**
Tetraphyllidean cercoids from bony fishes occurring in the Ross Sea (Antarctic) [1994, eng] **B-55003**

PHYSIOLOGY

Activity of lanternfish proteases and lipase [1986, rus] **B-56320**
Age and growth of *Notothenia gibberifrons* Lönnberg 1905 at South Georgia [1990, spa] **B-55236**
Age and growth of *Trematomus bernacchii* from Terra Nova Bay [1996, eng] **B-54469**
Age determination in *Notothenia coriiceps* from Potter Cove [1996, eng] **B-56334**
Antarctic fish retina. Histological variations under continuous darkness [1990, eng] **B-55343**
Antifreeze glycopeptides and peptides in fish from the Weddell and Lazarev seas [1996, eng] **B-54647**
Blood rheology of antarctic fishes: viscosity adaptations [1996, eng] **B-54988**
Chromosomal compliment of the Artedidraconidae from the Scotia Sea [1996, eng] **B-56056**
Cold adaptation in some antarctic fishes [1995, eng] **B-54784**
Cytochrome b gene sequences and antifreeze gene structure in eelpouts from McMurdo Sound [1994, eng] **B-54287**
Distribution, abundance and biology of *Patagonotothen brevicauda guntheri* from the Shag Rocks [1990, spa] **B-55237**
Dynamic instability of microtubules from antarctic fishes [1994, eng] **B-54288**
EM of the fish tectum [1996, eng] **B-54785**
Evolution and adaptive radiation of antarctic fishes [1996, eng] **B-55105**
Fatty acid-binding protein from antarctic icefish muscle [1995, eng] **B-54187**
Feeding behavior in 3 species of Artedidraconidae fish [1996, eng] **B-55458**
Feeding physiology of some antarctic fishes [1996, eng] **B-55926**
Fish adaptation to different temperatures by changes in gene expression [1995, eng] **B-54193**
Fishes from the Davis Sea and Prydz Bay (AzCherNIRO expeditions in 1978 and 1983) [1990, rus] **B-56309**
Glycoprotein antifreeze in *Notothenia coriiceps* from Marion I. [1994, eng] **B-54175**
Heart of the icefish: bioconstruction and adaptation [1995, eng] **B-54891**
Hemoglobin system in an antarctic teleost [1996, eng] **B-56269**
Histology of ovarian development of *Champsocephalus gunnari* from South Geogia [1995, eng] **B-54428**
Hydrodynamic diameter of fish antifreeze molecules [1994, eng] **B-55773**

Intracellular fatty acid-binding protein in antarctic and temperate-zone fishes [1994, eng] **B-55059**
Karyotype diversity in three fish species of the family *Bathydraconidae* from western Antarctic [1990, rus] **B-56310**
Karyotypes of the species *Harpagifer* from the South Orkneys and Macquarie I. [1996, eng] **B-56055**
Metabolic capacity and sensory performance of notothenioids [1993, eng] **B-54970**
Na^+/K^+-ATPase in antarctic fish [1995, eng] **B-54910**
Natural mortality of a mackerel icefish around South Georgia [1995, eng] **B-54893**
Occurrence of a copepod parasite on the fish *Champsocephalus gunnari* [1993, eng] **B-54142**
Population differentiation by size for mackerel icefish at Shag Rocks and South Georgia [1996, eng] **B-54552**
Spawning, hatching and growth of *Champsocephalus gunnari* around the Kerguelen Is. [1995, eng] **B-54427**
Splenic control in an antarctic fish [1996, eng] **B-55096**

POPULATION
Blackfin icefish stock off South Georgia, 1988-1992 [1993, eng] **B-54139**
Egg-shell distribution and abundance, and egg-shell morphology, of antarctic fish at South Georgia [1996, eng] **B-55597**
Evaluation model for yield and long-term status of fish stocks [1996, eng] **B-56098**
Fish distribution and biomass in the Heard I. zone [1995, eng] **B-54426**
Fishes of the Tristan da Cunha group and Gough Island, South Atlantic Ocean [1995, eng] **B-55310**
Fur seal diet at South Georgia [1996, eng] **B-55315**
Leslie depletion model for abundance assessment of the Patagonian toothfish [1996, eng] **B-56099**
Natural mortality of a mackerel icefish around South Georgia [1995, eng] **B-54893**
Performance of the FP-120 trawl in fish stock assessment surveys around South Georgia [1995, eng] **A-54429**
Population differentiation by size for mackerel icefish at Shag Rocks and South Georgia [1996, eng] **B-54552**
Spawning, hatching and growth of *Champsocephalus gunnari* around the Kerguelen Is. [1995, eng] **B-54427**
Structure of borel from the South Georgia and South Shetlands region [1989, pol] **B-54371**

TAXONOMY
Activity of lanternfish proteases and lipase [1986, rus] **B-56320**
Chromosomal compliment of the Artedidraconidae from the Scotia Sea [1996, eng] **B-56056**
Evolution of antarctic fishes [1995, eng] **B-54682**
Fish taken during the "Antártida 86 11" expedition [1990, spa] **B-55235**
Fishes of the Tristan da Cunha group and Gough Island, South Atlantic Ocean [1995, eng] **B-55310**
Karyotype diversity in three fish species of the family *Bathydraconidae* from western Antarctic [1990, rus] **B-56310**
Karyotypes of the species *Harpagifer* from the South Orkneys and Macquarie I. [1996, eng] **B-56055**
Systematics and phylogeny of antarctic dragonfishes (Bathydraconidae, Notothenioidei, Perciformes) [1995, eng] **B-55162**

Place names

Plankton
Cruise report of the 1994 *Victor Hensen* cruise [1996, eng] **J-54900**
High cadmium content in organisms from Terra Nova Bay [1996, eng] **B-55964**
Hydrocarbons in the antarctic marine environment: monitoring and background [1994, eng] **J-54388**
Microplankton summer communities at the ice-edge zone [1996, eng] **B-55982**
Planktic foraminifera in the subantarctic Atlantic [1996, eng] **J-55695**
Plankton and physico-chemical parameters in surface waters of the Antarctic [1993, eng] **B-54953**
Psychrophilic and psychrotrophic respiratory metabolism in antarctic microplankton [1996, eng] **B-55961**
Tropic role of myctophids in the southern ocean ecosystem [1995, eng] **B-54430**

PHYTOPLANKTON
Anomalies of hydrometeorological conditions in the South Atlantic Ocean [1986, rus] **J-56324**
Antarctic diatom nitrate exhaustion and mortality [1996, eng] **B-55411**
Antarctic krill enzyme physiology [1996, eng] **B-55410**
Antarctic phytoplankton and DNA library from communities exposed to ultraviolet-B [1994, eng] **B-54843**
Bacterioplankton viability and ultraviolet radiation [1995, eng] **B-54199**
Carbon-13 in algal and sedimentary biomarkers from the Amundsen and Bellingshausen Seas [1994, eng] **J-54160**
Chlorophyll-*a* summer vertical distribution in Boeckella Lake [1996, eng] **B-55588**
Climate change in the recent evolution of a pro-glacial lake [1996, eng] **B-54555**
Contribution of fast-ice algae to the spring phytoplankton bloom in Ellis Fjord [1996, eng] **B-55191**
Depletion of inorganic nutrients around Elephant I. [1994, eng] **J-54700**
Dimethysulfide, algal pigments and light in an antarctic *Phaeocystis* sp. bloom [1995, eng] **B-54904**
Downward fluxes of fatty acids and hydrocarbons in Breid Bay in summer [1996, eng] **B-56257**
Ecosystem of the sea ice in Antarctica [1989, pol] **F-54357**
Fall phytoplankton biomass, P-I relationships and primary production in the Weddell Sea [1996, eng] **B-54687**
Floristic zonation of the southern ocean [1993,] **B-56034**
Ice-edge hydrography between Elephant I. and the South Orkneys, summer 1988-1989 [1990, spa] **J-55232**
Long-Term Ecological Research in an ice-dominated ecosystem in winter 1993 [1994, eng] **B-54705**
McMurdo LTER: Paleolimnology of Taylor Valley, Antarctica [1994, eng] **E-54717**
Measurement of planktonic respiration levels in antarctic coastal waters [1996, eng] **B-54896**
Microbial dynamics in coastal waters of East Antarctica [1996, eng] **B-56183**
Microplankton bloom dynamics in McMurdo Sound, Antarctica [1993, eng] **B-54459**
Nutrient cycle in the Bransfield Strait [1989, chi] **J-55716**
Occurrence of net phytoplankton between Elephant I. and the southern passages [1989, pol] **B-54369**
Open-ocean phytoplankton blooms north of South Georgia in summer 1994 [1996, eng] **J-56189**
Photoadaptation in a coastal phytoplankton bloom [1994, eng] **B-54708**
Phytoplankton acclimatization to UVR exposure [1995, eng] **B-54665**
Phytoplankton biomass and taxonomy around Elephant I. [1995, eng] **B-54063**
Phytoplankton biomass distribution in Ross Sea, Antarctica [1996, eng] **B-56124**
Phytoplankton biomass in the western Ross Sea: January and February 1994 [1994, eng] **B-54279**
Phytoplankton biomass, productivity and organic carbon in the southern ocean [1996, eng] **B-54683**
Phytoplankton community and water masses northwest of the Antarctic Peninsula [1989, chi] **B-55732**
Phytoplankton composition, biomass and distribution in Bransfield Strait, Feb. 1993 [1995, eng] **B-54650**
Phytoplankton distribution and species composition around Elephant I., Jan.-Mar. 1994 [1994, eng] **B-54698**
Phytoplankton distribution in different water masses [1994, eng] **B-54699**
Phytoplankton nutrient deficiency in lakes of the McMurdo Dry Valleys, Antarctica [1995, eng] **B-54409**
Phytoplankton nutrient deficiency in Taylor Valley lakes [1994, eng] **B-54719**
Phytoplankton photobiological characteristics around Elephant I. [1994, eng] **B-54697**
Phytoplankton pigment identification in waters adjacent to the Great Wall Station [1995, eng] **B-54568**
Phytoplankton pigment profiles, Weddell-Scotia Confluence, spring 1993 [1994, eng] **B-54281**
Phytoplankton pigments during JARE-30, Nov. 1988-Mar. 1989 [1996, eng] **B-56105**
Phytoplankton pigments during JARE-31, Nov. 1989-Mar. 1990 [1996, eng] **B-56106**
Phytoplankton pigments during JARE-32, Nov. 1990-Mar. 1991 [1996, eng] **B-56107**
Phytoplankton pigments during JARE-33, Nov. 1991-Mar. 1992 [1996, eng] **B-56108**
Phytoplankton pigments during JARE-34, Nov. 1992-Mar. 1993 [1996, eng] **B-56109**
Phytoplankton pigments during JARE-35, Nov. 1993-Mar. 1994 [1996, eng] **B-56110**
Phytoplankton responses to ultraviolet irradiance in the Weddell-Scotia Confluence in spring [1994, eng] **B-54839**
Phytoplankton winter-spring biomass and productivity in Lake Bonney [1996, eng] **B-54725**
Phytoplankton, chlorophyll-*a* and krill distribution in waters northwest of the Antarctic Peninsula [1989, chi] **B-55731**
Planktonic biomass variations in an antarctic lake [1996, eng] **B-55435**

Parameterization of lead formation in the Weddell Sea using SAR-derived ice velocity fields [1994, eng] **F-55782**
Role of the Antarctic in global change [1993, eng] **F-56003**
SCAR report No.11, Feb. 1996 [1996, eng] **I-55365**
Sea ice [1996, eng] **F-55939**
Seasonal chlorophyll changes in waters under fast ice, 1992 [1996, chi] **J-55876**
Semiannual cycle and sea ice extent in the southern ocean [1995, eng] **F-56227**
Simulations of antarctic climate using a limited area model [1996, eng] **I-55951**
Turbulent oceanic heat flux during winter in the central Weddell Sea [1995, eng] **J-56229**
Wind events compared with polynya area estimates derived from SSM/I data [1993, eng] **F-55286**
MECHANICAL PROPERTIES
Acoustic emission during fatigue experiments on first year sea ice [1996, eng] **F-55992**
Preliminary results from fatigue tests on in situ sea ice beams [1996, eng] **F-55224**
Small-scale structure of internal stresses in consolidated ice cover [1995, eng] **F-56173**
Stresses in sea ice in the neighboring force interaction zone [1995, eng] **F-55228**
Variability of internal stresses in typical local ice cover inhomogeneities [1995, eng] **F-56040**
MORPHOLOGY
Field observations of microwave backscatter from Weddell Sea ice [1996, eng] **F-54420**
Wave-pancake ice interactions [1994, eng] **F-54149**
PHYSICAL PROPERTIES
C-band radar backscatter from antarctic first-year sea ice. 1 [1995, eng] **F-55638**
C-band radar backscatter from antarctic first-year sea ice. 2 [1995, eng] **F-55639**
Field observations of microwave backscatter from Weddell Sea ice [1996, eng] **F-54420**
Optical properties of sea ice [1996, eng] **F-55957**
Preliminary results from fatigue tests on in situ sea ice beams [1996, eng] **F-55224**
Sea ice [1996, eng] **F-55939**
Sea ice morphology [1994, eng] **F-55868**
Study of antarctic pack ice [1995, eng] **F-55114**
POLLUTION
Ice wharves sampling and analysis plan for ocean dumping, McMurdo Station, Antarctica [1993, eng] **G-54737**
RADIATION
Reduction of weather effects in the calculation for sea-ice concentration with the DMSP SSM/I [1995, eng] **F-54066**
Surface radiation budget, Svalbard and Antarctica, 1987 [1995, eng] **F-54249**
SOUNDINGS
Airborne radio echo investigations of a marine ice body [1995, eng] **F-56065**
Snow, sea-ice and radar observations during ANT X/4: summary data report [1994, eng] **F-56171**
STRUCTURE
Ice-core analysis for sea-ice development in Ross, Amundsen and Bellingshausen seas, 1993 and 1994 winters [1995, eng] **F-55635**
Physical controls on antarctic sea ice ecosystems [1994, eng] **B-55870**
Sea ice [1996, eng] **F-55939**
Sea ice morphology [1994, eng] **F-55868**
Snow, sea-ice and radar observations during ANT X/4: summary data report [1994, eng] **F-56171**
Variability of internal stresses in typical local ice cover inhomogeneities [1995, eng] **F-56040**
SURFACE FEATURES
Application of synthetic aperture radar (SAR) imagery on antarctic glaciology [1995, jpn] **F-54995**
C-band backscatter measurements of winter sea-ice in the Weddell Sea, Antarctica [1995, eng] **F-54060**
TEMPERATURE
Heat flux through Weddell Sea ice cover [1996, eng] **F-55170**
Variability of internal stresses in typical local ice cover inhomogeneities [1995, eng] **F-56040**
TERMINOLOGY
Sea ice [1996, eng] **F-55090**
THAWING
Antarctic oceanic seasonal variations in Lützow-Holm Bay [1996, eng] **J-56044**
Ice-edge hydrography between Elephant I. and the South Orkneys, summer 1988-1989 [1990, spa] **J-55232**
On the ocean's upper boundary conditions in regions influenced by sea ice [1996, eng] **F-56252**
Probability of sea level rise [1995, eng] **J-55353**
THICKNESS
Global climate model with 1°-resolution sea ice and ocean components [1995, eng] **F-56239**
Global sea-ice—upper-ocean model: some preliminary results [1993, eng] **F-55054**
Heat flux through Weddell Sea ice cover [1996, eng] **F-55170**
Ice algae biomass variations around Zhongshan Station [1995, chi] **B-54582**
Interaction between polar climate and global warming [1995, eng] **I-56238**
Neogloboquadrina pachyderma distribution in the sea ice of Lützow-Holm Bay [1996, eng] **B-55452**
On the ocean's upper boundary conditions in regions influenced by sea ice [1996, eng] **F-56252**
On the representation of sea ice in global ocean general circulation models [1996, eng] **F-56121**
Review of the airborne radio echo sounding data of the Filchner-Ronne Ice Shelf [1995, eng] **F-56083**
Sea ice and snow thickness in antarctic seas, winter 1993-94 [1995, eng] **F-55636**
Sea ice in the global climate system: requirements for an ocean observing system [1995, eng] **I-54858**
Sea ice morphology [1994, eng] **F-55868**
Sea ice thickness observations from East Antarctica [1994, eng] **F-56005**
Sea ice: Part 1. Bulk salinity versus ice floe thickness [1996, eng] **F-55956**
Snow cover on winter sea ice of Amundsen and Ross seas [1995, eng] **F-55637**
Snow, sea-ice and radar observations during ANT X/4: summary data report [1994, eng] **F-56171**
Submarine topographical chart around Filchner-Ronne Ice Shelf [1995, eng] **F-55205**
Ultraviolet radiation in the southern seas in early spring 1993 [1994, eng] **F-54833**
Variability of internal stresses in typical local ice cover inhomogeneities [1995, eng] **F-56040**
VARIATIONS
Atmospheric and oceanic forcing of Weddell Sea ice motion [1996, eng] **F-56045**
Atmospheric circulation and sea ice extent in the west Antarctic Peninsula area [1994, eng] **F-54378**
Atmospheric effects on sea ice radiometry [1996, ger] **I-56130**
Atmospheric heat budget seasonal variations in 1988 [1995, eng] **I-54251**
Factors influencing the distribution of diatoms and other algae in the Ross Sea [1996, eng] **B-56126**
Global sea ice coverage [1993, eng] **F-55814**
Iceberg observations and estimation of submarine ridges in the western Weddell Sea [1995, eng] **F-54061**
Long-term observations for monitoring of the cryosphere [1995, eng] **I-54448**
Marginal ice zone [1994, eng] **F-55873**
On the ocean's upper boundary conditions in regions influenced by sea ice [1996, eng] **F-56252**
Project 7: circulation, heat transport and sea ice changes in the southern ocean [1992, eng] **A-55888**
Sea ice in the global climate system: requirements for an ocean observing system [1995, eng] **I-54858**
Sea-ice evolution in the Amundsen and Bellingshausen Seas [1994, eng] **F-54158**
Semiannual cycle and sea ice extent in the southern ocean [1995, eng] **F-56227**
Sensitivity of global climate to low-cloud physical properties, pt.1 [1996, eng] **F-56253**
Sensitivity of numerical prognoses to antarctic sea ice distribution [1995, eng] **F-54129**
Southern Hemisphere climate and glacial history over the past 5 million years [1995, eng] **E-55997**
Southern hemisphere climate system recovery from 'instantaneous' sea-ice removal [1996, eng] **I-56194**
Spatial and temporal variability in southern ocean sea ice coverage [1993, eng] **F-55227**
Western Weddell stratification and ice cover [1994, eng] **F-54152**
VOLUME
Climate changes in Antarctica over the past 500 years from ice core evidence [1996, eng] **F-55916**
Long-range sea ice forecasting at the National Ice Center [1995, eng] **F-56218**

Penguin population dynamics in relation to sea ice distribution [1996, eng] B-55333
Recent climate variability in the vicinity of the Antarctic Peninsula [1994, eng] I-54392
Sea ice extent and surface mass accumulation in Amundsen, Bellingshausen and Weddell seas [1993, eng] F-54517
Sea-ice evolution in the Amundsen and Bellingshausen Seas [1994, eng] F-54158
Semiannual cycle and sea ice extent in the southern ocean [1995, eng] F-56227
Temporal variability of precipitation over the western Antarctic Peninsula [1995, eng] I-56226
Western Weddell stratification and ice cover [1994, eng] F-54152

Sea level
Antarctic ice sheet mass balance [1961, ger] F-55625
Ice sheets, climate change and sea level [1996, eng] F-54479
Impact of Late Ordovician glaciation-deglaciation on marine life [1995, eng] B-55973
Interannual variations in antarctic precipitation related to El Niño-Southern Oscillation [1996, eng] I-55952
Large-scale circulation and its variability in the south Indian Ocean from TOPEX/POSEIDON altimetry [1995, eng] J-54307
New Zealand Oligocene sedimentary evidence of initiation of Antarctic Circumpolar Current [1996, eng] J-54655
Ocean circulation variations associated with the Antarctic Circumpolar Wave [1996, eng] J-56020
Oceanic satellites in the Global Ocean Observing System [1993, eng] J-55052
Probability of sea level rise [1995, eng] J-55353
Risk of sea level rise [1996, eng] I-55903
Rosame: sea-level observation network in antarctic and subantarctic areas [1996, fre] J-56342
Scales of spatial and temporal variability in the southern ocean [1996, eng] J-55169
Science and implementation plan for US ITASE [1996, eng] A-55384
Seismic survey of the Ross Sea continental shelf [1994, eng] E-54276

Sea transportation
See: Cargo operations/Sea; Transportation/Sea

Sea travel

Sea water
New geography of the polar regions: synthesis and perspectives [1994, ita] A-54330
Proceedings [1989, chi] A-55705
Winter investigations in the Ross, Amundsen and Bellingshausen seas, 1993-1995 [1995, spa] F-54257
See [also]: Ocean/Water masses

ACOUSTICS
Cephalopods and mesoscale oceanography at the Antarctic Polar Front [1996, eng] B-56184

AGE DETERMINATION
Carbon tetrachloride as tracer of Weddell Sea bottom waters [1996, eng] J-56019

CHEMISTRY
135,000-year Vostok SPECMAP common temporal framework [1993, eng] I-54352
Accumulation rates for Ross Sea biogenic sediments [1996, eng] J-56127
Advection of suspended sediment in the Ross Sea [1994, eng] J-54156
Antarctic hydromedusae and water masses [1990, eng] B-55349
Antarctic oceanic seasonal variations in Lützow-Holm Bay [1996, eng] J-56044
Atlantic thermohaline circulation inferred [1996, eng] J-54454
Bacterial number and biomass in the antarctic waters [1989, chi] B-55735
Behavior of mercury in seawater to the northwest of the Antarctic Peninsula [1989, chi] J-55723
Biogenic implications of Ross Sea particle transport [1996, eng] J-56125
Biogenic opal and barium as productivity change indicators [1995, ger] J-54436
Biological CO$_2$ pump in seasonally ice-covered waters [1996, eng] B-55449
Biomass patterns in the Ross Sea, Antarctica [1996, eng] B-56123
Carbon tetrachloride as tracer of Weddell Sea bottom waters [1996, eng] J-56019
Carbon-13 in algal and sedimentary biomarkers from the Amundsen and Bellingshausen Seas [1994, eng] J-54160
Carbonyl sulfide concentrations in the surface waters and above the Indian Ocean [1989, eng] J-55853
Chemical characteristics of water masses in the Bransfield Strait [1989, chi] J-55715
CO$_2$ pressure in the Pacific Ocean surface waters in summers of 1992 and 1994 [1994, eng] J-54159
Cruise ANTARKTIS XII/4 of RV *Polarstern* in 1995: CTD-report [1995, eng] J-54239
Deep water distillation [1996, eng] J-55112
Depletion of inorganic nutrients around Elephant I. [1994, eng] J-54700
Diatom preservation comparison in oxic and anoxic basins [1995, eng] B-55777
Diel periodicity of subantarctic copepods [1996, eng] B-55979
Dimethyl sulfide analysis in *Phaeocystis pouchetii* from McMurdo Sound [1994, eng] B-54155
Dimethysulfide, algal pigments and light in an antarctic *Phaeocystis* sp. bloom [1995, eng] B-54904
Dissolved oxygen saturation in waters studied during the "Antártida 86 11" expedition [1990, spa] J-55234
Disturbances in the thermohaline structure of the near-surface ocean layer in the wake of an iceberg [1995, rus] J-54818
DMS flux in the southern ocean [1996, eng] I-55690
Downward fluxes of fatty acids and hydrocarbons in Breid Bay in summer [1996, eng] B-56257
Estimates of Ross Sea sedimentary fluxes [1996, eng] J-56128
Fall phytoplankton biomass, P-I relationships and primary production in the Weddell Sea [1996, eng] B-54687
Freezing driven upwelling in antarctic sea ice biological systems [1996, eng] B-55448
FY-1994 environmental sampling and analysis plan for Winter Quarters Bay [1993, eng] B-54736
Geochemistry in an area recently uncovered from the Filchner Ice Shelf [1996, eng] J-55854
Glacial circulation in atmospheric models [1996, ger] J-55977
Glacial southern ocean paleoceanography [1996, eng] J-55608
High cadmium content in organisms from Terra Nova Bay [1996, eng] B-55964
High resolution study of the platelet ice ecosystem in McMurdo Sound [1995, eng] B-54198
Humification dynamics of algal derived dissolved organic carbon [1995, eng] B-55844
Hydrocarbons in the antarctic marine environment: monitoring and background [1994, eng] J-54388
Hydrographic changes of the Indian Ocean over the last 230 kyr [1996, eng] J-54861
Hydrography of Admiralty Bay [1995, eng] J-55576
Hydrography of Admiralty Bay in the summer of 1988-1989 [1990, spa] J-55233
Ice-edge hydrography between Elephant I. and the South Orkneys, summer 1988-1989 [1990, spa] J-55232
Inorganic geochemistry and calcium carbonate dynamics [1994, eng] E-54718
Interocean exchange of GNAIW and subantarctic Cd/Ca and carbon isotope measurements [1996, eng] J-55607
Iron stimulation of antarctic bacteria [1996, eng] J-55899
Isotope ratios of O and C in brachiopods [1995, eng] B-55213
Large diatom bloom impact on macronutrient distribution in Arthur Harbor, summer 1991-1992 [1994, eng] B-54709
Late Cretaceous oceans and the cool tropic paradox [1996, eng] J-54444
Long-Term Ecological Research in an ice-dominated ecosystem in winter 1993 [1994, eng] B-54705
Longitudinal distributions of dissolved barium, silica and alkalinity in the western and southern Indian Ocean [1996, eng] J-55160
Measurement of planktonic respiration levels in antarctic coastal waters [1996, eng] B-54896
Microbial biology of melting Weddell Sea ice [1996, eng] B-55313
Microbial dynamics in coastal waters of East Antarctica [1996, eng] B-56183
Microplankton summer communities at the ice-edge zone [1996, eng] B-55982
Mixing of AABW in the mid-Atlantic [1996, eng] J-54453
Modeling the oceanic general circulation [1996, eng] J-55155

Movement of the ice shelf at Maudheim [1958, eng] F-55643
DENSITY
Ice shelf structure at Maudheim Station [1958, eng] F-55618
DESTRUCTION
Partial disintegration of antarctic ice [1995, por] F-54745
DRILLING
Ice shelf structure at Maudheim Station [1958, eng] F-55618
FLOW
Airborne radio echo sounding during the Filchner V field season [1995, eng] F-56068
Basal melting at grounding line of Rufford Ice Stream from seismic surveys [1995, eng] F-56084
Evolving front of the Ross Ice Shelf [1994, eng] F-54272
Geodetic fieldwork along Foundation Ice Stream [1995, eng] F-56081
Glaciological investigations on the Foundation Ice Stream [1995, eng] F-56073
Landsat and ERS-1 SAR image data analysis of the Filchner-Ronne Ice Shelf [1995, eng] F-56071
Movement of the ice shelf at Maudheim [1958, eng] F-55643
Thermistor cable record analysis under the Ronne Ice Shelf [1995, eng] J-56077
Weddell Sea glaciomarine sedimentation variations [1996, eng] E-55545
GRAVIMETRIC EXPLORATION
Geoid determination in the Filchner Ronne Ice Shelf [1995, eng] F-56085
HEAT EXCHANGE
Deployment of oceanographic-glaciological strings under the Filchner-Ronne-Schelfeis in 1995 [1995, eng] F-56078
German Filchner V Campaign in 1995: results from Berkner I. [1995, eng] F-56079
Interaction between ice-shelf cavities and the open ocean [1995, eng] F-56067
New formulation for the Bowen ratio over saturated surfaces [1996, eng] I-55659
Surface energy and water balance over an antarctic ice shelf in winter [1995, eng] F-56219
Thermistor cable record analysis under the Ronne Ice Shelf [1995, eng] J-56077
MASS BALANCE
Airborne radio echo sounding during the Filchner V field season [1995, eng] F-56068
Glaciological investigations on the Foundation Ice Stream [1995, eng] F-56073
Ice shelf basal melting at the grounding line, measured from seismic observations [1996, eng] F-56048
Landsat and ERS-1 SAR image data analysis of the Filchner-Ronne Ice Shelf [1995, eng] F-56071
Rapid collapse of northern Larsen Ice Shelf, Antarctica [1996, eng] F-54240
Surface energy and water balance over an antarctic ice shelf in winter [1995, eng] F-56219
MECHANICAL PROPERTIES
GPS recording of Hells Gate ice shelf tidal responses [1994, eng] F-54653
MORPHOLOGY
Antarctic map from the Geosat Radar Altimeter Geodetic Mission [1992, eng] C-55933
Evolving front of the Ross Ice Shelf [1994, eng] F-54272
GPS recording of Hells Gate ice shelf tidal responses [1994, eng] F-54653
PHYSICAL PROPERTIES
Submersible remote controlled vehicles for glacier-ocean-sediment study [1996, eng] G-55083
POLLUTION
Movement of fuel spills in the Ross Ice Shelf [1994, eng] G-55148
SEISMIC EXPLORATION
Basal melting at grounding line of Rufford Ice Stream from seismic surveys [1995, eng] F-56084
Glaciological investigations on the Foundation Ice Stream [1995, eng] F-56073
Ice shelf basal melting at the grounding line, measured from seismic observations [1996, eng] F-56048
Towed geophone system for use in snow-covered terrain [1996, eng] E-55541
SOUNDINGS
Airborne radio echo sounding during the Filchner V field season [1995, eng] F-56068
Review of the airborne radio echo sounding data of the Filchner-Ronne Ice Shelf [1995, eng] F-56083
Towed geophone system for use in snow-covered terrain [1996, eng] E-55541
STRATIGRAPHY
Airborne radio echo sounding during the Filchner V field season [1995, eng] F-56068
Towed geophone system for use in snow-covered terrain [1996, eng] E-55541
STRUCTURE
Internal and basal ice changes near the grounding line derived from radio-echo sounding [1996, eng] F-55082
SURFACE FEATURES
Aurora, June 1996, Vol.15, No.4 [1996, eng] A-55508
Aurora, Mar. 1996, Vol.15, No.3 [1996, eng] A-55017
Correction of satellite radar altimetry of antarctic ice sheets [1996, eng] F-55107
Landsat and ERS-1 SAR image data analysis of the Filchner-Ronne Ice Shelf [1995, eng] F-56071
THAWING
Ablation rates under the Ekström Ice Shelf deduced from different methods [1995, eng] F-56072
Basal melting at grounding line of Rufford Ice Stream from seismic surveys [1995, eng] F-56084
Deployment of oceanographic-glaciological strings under the Filchner-Ronne-Schelfeis in 1995 [1995, eng] F-56078
Ice shelf basal melting at the grounding line, measured from seismic observations [1996, eng] F-56048
THICKNESS
Airborne radio echo sounding during the Filchner V field season [1995, eng] F-56068
Antarctic ice sheet melting in the southeast Pacific [1996, eng] F-55217
German Filchner V Campaign in 1995: results from Berkner I. [1995, eng] F-56079
Ice shelf basal melting at the grounding line, measured from seismic observations [1996, eng] F-56048
Interaction between ice-shelf cavities and the open ocean [1995, eng] F-56067
VARIATIONS
Evolving front of the Ross Ice Shelf [1994, eng] F-54272
Record of Holocene paleoclimate changes from glacial marine sediments in Lallemand Fjord [1996, eng] E-54767
Submersible remote controlled vehicles for glacier-ocean-sediment study [1996, eng] G-55083

Distribution of hydrogen peroxide in surface snow over antarctic ice sheet [1996, eng] F-54489
Effects of snow ventilation on chemical concentrations [1996, eng] F-55828
Flux and fluence of major solar proton events and their record in antarctic snow [1994, eng] K-55019
Inorganic geochemistry and calcium carbonate dynamics [1994, eng] E-54718
Ionic constituents of surface snow samples, 1992-1993 [1995, eng] F-54921
New radiochemical procedures for environmental actinide measurements and data quality control [1995, eng] A-54172
Peroxide concentrations in the Dome Summit South ice core, Law Dome, Antarctica [1996, eng] F-55583
Peroxide record from the DSS ice core, Law Dome, Antarctica: preliminary results [1996, eng] F-55834
Recent climate anomalies and their impact on snow chemistry at South Pole, 1987-1994 [1996, eng] I-56211
Record of aerosol deposited species in ice cores, and problems of interpretation [1996, eng] F-55820
Record of gases and reactive species in ice cores, and problems of interpretation [1996, eng] F-55822
Sea salt ions in ice cores from King George Island [1996, chi] F-56116
Snow filtering of aerosols as ice sheet deposition mechanism [1996, eng] F-55797
Wind-blown snow: sublimation, transport and changes to polar snow [1996, eng] F-55829

COMPACTION
Utilization of large aircraft in the Antarctic [1996, jpn] G-56340

CONSTRUCTION
Casey Airfield project report, summer 89/90 [1990, eng] G-55855
Design of undersnow facilities for Byrd Station [1962, eng] G-54670
Utilization of large aircraft in the Antarctic [1996, jpn] G-56340
Workshop on Antarctic Air Transport Networks [1995, eng] G-55547

CRYSTALS
Morphological studies on the polycrystalline snow germs [1992, eng] F-55687
Observation of snow crystals in Antarctica and Greenland [1995, eng] F-54917
Study of snowflakes in antarctic clouds [1996, eng] F-55001

DEFORMATION
Design of undersnow facilities for Byrd Station [1962, eng] G-54670

DENSITY
Comparison of arctic, antarctic, and Himalayan ice [1989, eng] F-54462
German Filchner V Campaign in 1995: results from Berkner I. [1995, eng] F-56079
Microwave emission from density-stratified antarctic firn at 6 cm wavelength [1996, eng] F-55080
Passive microwave remote sensing of snow: volume scattering in antarctic firn [1995, eng] F-54811
Shallow ice coring and borehole casing at Dome Fuji Station, East Antarctica [1995, eng] F-54048
Snow studies at Maudheim [1958, eng] F-55616

DISTRIBUTION
Drifted snow affects momentum exchange over sea ice [1994, eng] F-54148
Field observations of microwave backscatter from Weddell Sea ice [1996, eng] F-54420
Wind-blown snow: sublimation, transport and changes to polar snow [1996, eng] F-55829

DRIFTING
Chemical composition of snow between the Ronne Ice Shelf and the South Pole [1995, eng] F-54920
Drifted snow affects momentum exchange over sea ice [1994, eng] F-54148
Hydrographic and climatic changes and proglacial Druzhby drainage system [1996, eng] E-56283
Snow accumulation and transport dynamics on the Ross Ice Shelf [1994, eng] F-54147
Snow hardness variations in Patriot Hills [1995, eng] F-54919
Surface energy and mass balance at Halley, Antarctica during winter [1996, eng] I-55953
Turbulent exchange in the surface layer over antarctic snow and ice [1996, eng] I-55830

HEAT EXCHANGE
Astronomical forcing of the last glacial-interglacial cycle [1989, eng] I-55851
Atmosphere/sea ice interaction in global climate models: a review [1994, eng] F-55869
Peroxide record from the DSS ice core, Law Dome, Antarctica: preliminary results [1996, eng] F-55834
Surface energy and mass balance at Halley, Antarctica during winter [1996, eng] I-55953
Temperature distribution in Collins Ice Cap, King George I. [1995, eng] F-54570
Turbulent exchange in the surface layer over antarctic snow and ice [1996, eng] I-55830

INSTRUMENTS
Japanese antarctic activities for 1995-1996 [1996, eng] A-54266
Measuring snow particle size from video radar images [1995, eng] F-54248
Snow accumulation and transport dynamics on the Ross Ice Shelf [1994, eng] F-54147
Study of snowflakes in antarctic clouds [1996, eng] F-55001
Towed geophone system for use in snow-covered terrain [1996, eng] E-55541

MAPS AND CHARTS
Glaciological data collected by JARE-35, 1994-1995 [1996, eng] F-55368
Polar data sets from the Defense Meteorological Satellite Program (DMSP) [1995, eng] I-56222

MASS BALANCE
Livingston Island, Antarctica ice radioactivity variations [1996, eng] F-55947
Surface energy and mass balance at Halley, Antarctica during winter [1996, eng] I-55953

MODELS
Passive microwave remote sensing of snow: volume scattering in antarctic firn [1995, eng] F-54811

MORPHOLOGY
Comparison of arctic, antarctic, and Himalayan ice [1989, eng] F-54462
Snow studies at Maudheim [1958, eng] F-55616
Snow studies inland [1958, eng] F-55617

PHYSICAL PROPERTIES
Snow filtering of aerosols as ice sheet deposition mechanism [1996, eng] F-55797
Wind-blown snow: sublimation, transport and changes to polar snow [1996, eng] F-55829

POLLUTION
Acidic gases: a review of ice core data and their air-snow relationships [1996, eng] F-55821
Chemical composition of snow between the Ronne Ice Shelf and the South Pole [1995, eng] F-54920
Dirty oil makes a feast for soil bacteria [1996, eng] G-55075
Ionic constituents of surface snow samples, 1992-1993 [1995, eng] F-54921

RADIATION
Snow and ice reflectance spectra of the Nansen Ice Sheet surfaces [1996, eng] F-55223

SOUNDINGS
Passive microwave remote sensing of snow: volume scattering in antarctic firn [1995, eng] F-54811

STRATIGRAPHY
Snow cover on winter sea ice of Amundsen and Ross seas [1995, eng] F-55637
Snow stratigraphy and accumulation rate in the Lambert Glacier basin [1995, chi] F-55308
Snow studies at Maudheim [1958, eng] F-55616
Snow studies inland [1958, eng] F-55617

STRUCTURE
Measuring snow particle size from video radar images [1995, eng] F-54248
Snow cover on winter sea ice of Amundsen and Ross seas [1995, eng] F-55637
Snow hardness variations in Patriot Hills [1995, eng] F-54919

SUBLIMATION
Snow filtering of aerosols as ice sheet deposition mechanism [1996, eng] F-55797
Surface energy and mass balance at Halley, Antarctica during winter [1996, eng] I-55953
Surface energy and water balance over an antarctic ice shelf in winter [1995, eng] F-56219
Wind-blown snow: sublimation, transport and changes to polar snow [1996, eng] F-55829

SURFACE FEATURES
Albedo on snow surface in Patriot Hills, Antarctica [1995, eng] F-54916
Ice sheet surface features between 80 and 90S, along 90W [1995, eng] F-54918
Satellites for monitoring climate change [1994, eng] I-55066
Snow accumulation and transport dynamics on the Ross Ice Shelf [1994, eng] F-54147

Snow hardness variations in Patriot Hills [1995, eng] **F-54919**
TEMPERATURE
German Filchner V Campaign in 1995: results from Berkner I. [1995, eng] **F-56079**
Passive microwave remote sensing of snow: volume scattering in antarctic firn [1995, eng] **F-54811**
Surface energy and water balance over an antarctic ice shelf in winter [1995, eng] **F-56219**
THICKNESS
Heat flux through Weddell Sea ice cover [1996, eng] **F-55170**
Initiation of a continental ice sheet in a global climate model (GENESIS) [1996, eng] **I-55949**
Sea ice and snow thickness in antarctic seas, winter 1993-94 [1995, eng] **F-55636**
VARIATIONS
Meteorological observations at Showa Station by JARE-33 in 1992 [1995, jpn] **I-54999**
VOLUME
Polar cyclonic activity and snowfall at McMurdo Station [1995, eng] **I-56232**
Temporal variability of precipitation over the western Antarctic Peninsula [1995, eng] **I-56226**

Snowfall

Solar activity
Atmospheric ionization detected by nitrate measurements in snow [1995, eng] **K-56335**
Australian upper atmospheric and space physics research in Antarctica, 1992 [1992, eng] **K-54203**
Diurnal and seasonal occurrence of polar patches [1996, eng] **K-55520**
Helioseismology from South Pole: a clear view of the Sun [1994, eng] **K-55131**
Maximum ionospheric electronic concentrations over King George I. and Concepción, Chile [1995, spa] **K-54980**
Proceedings of the NIPR Symposium on Upper Atmosphere Physics, No.9 [1996, eng] **K-55371**
Riometer absorption events at SANAE, L=4.0 [1995, eng] **K-55038**
Solar-terrestrial events and atmospheric environment over Showa Station [1996, eng] **K-55374**
Sources of solar wind associated Pc3-5 magnetic pulsations in the magnetosphere [1992, eng] **K-54208**
U.S. National Science Foundation's Geospace Environmental Modelling (GEM) Program, 1990-1995 [1992, eng] **K-54205**
ULF magnetic pulsation studies in Antarctica [1992, eng] **K-54204**
COSMIC RAY EVENTS
Coincident events between SPASE and AMANDA detectors [1995, eng] **K-54895**
Cosmic ray diurnal variation near the heliospheric current sheet [1992, eng] **K-54222**
Cosmic ray observations from a station on Dome A [1992, eng] **K-54230**
Electron concentration and meteorological parameters at Molodezhnaya [1995, eng] **K-55767**
Flux and fluence of major solar proton events and their record in antarctic snow [1994, eng] **K-55019**
Heliospheric modulation models of high-energy cosmic rays [1992, eng] **K-54223**
Search for anisotropy in the cosmic microwave background radiation [1993, eng] **K-55609**
Solar cosmic-ray observatories at polar sites [1994, eng] **K-55132**
Solar modulation processes as recorded by cosmic ray telescopes [1992, eng] **K-54224**
South Pole air shower experiment [1994, eng] **K-55134**
Unprecedented sequence of ground level enhancements during the recent solar maximum [1992, eng] **K-54221**
See [also]: Radiation/Cosmic
CYCLES
Solar modulation processes as recorded by cosmic ray telescopes [1992, eng] **K-54224**
FLARES
Balloon-borne polarimetry [1996, eng] **K-55613**
Electron concentration and meteorological parameters at Molodezhnaya [1995, eng] **K-55767**
Flux and fluence of major solar proton events and their record in antarctic snow [1994, eng] **K-55019**
Unprecedented sequence of ground level enhancements during the recent solar maximum [1992, eng] **K-54221**
SUNSPOTS
Antarctic polar cap total electron content at Casey Station [1992, eng] **K-54216**
Geomagnetic field daily variations at Zhongshan Station, 1991 [1995, chi] **K-54598**
Magnetic storm changes at Zhongshan Station and in China [1996, chi] **K-55327**

Antarctic cheilostomatous bryozoa [1995, eng] **B-56314**
Antarctic Hexactinellida [1994, eng] **B-54666**
Antarctic krill *Thysanoessa macrura* fills a major gap in marine lipogenic pathways [1996, eng] **B-55283**
Antarctic marine red algae phylogenetic studies [1996, eng] **B-55810**
Antarctic polychaetes in 1984: Cirratulidae to Serpulidae [1989, ger] **B-55491**
Barnacles on southern elephant seal skin [1995, eng] **B-55013**
Biogeographic observations on South Georgia marine yeasts [1994, eng] **B-54278**
Classification uncertainties within foraminifera species in McMurdo Sound, Antarctica [1995, eng] **B-54446**
Copepods of Beaver Lake [1993, eng] **B-54993**
Diatoms in South Pole ice: implications for eolian contamination of Sirius Group deposits [1996, eng] **F-54457**
Dinosaur assemblage from the Transantarctic Mountains [1994, eng] **E-54085**
Early palynostratigraphy of the Heimefront Range [1995, eng] **E-54301**
Enigmatic gymnosperms? Structurally preserved Permian and Triassic seed ferns from Antarctica [1996, eng] **E-54760**
Euphausiid larvae in the Pacific sector of the Antarctic, 1992 [1995, eng] **B-56193**
Fatty acid adaptation in an antarctic bacterium—changes in primer utilization [1996, eng] **B-55051**
Fish infection by Digenea off Heard Island [1996, eng] **B-55789**
Food web of juvenile antarctic fish [1995, eng] **B-54564**
Foraminiferal bottom sediment assemblages from West Antarctica [1995, eng] **B-54447**
Four molluscan species from King George Island [1993, ger] **B-54297**
Geochemical variations in South Georgia subantarctic lakes [1996, eng] **B-56088**
Gut evacuation rates and pigment destruction in the antarctic krill *Euphausia superba* [1996, eng] **B-55277**
Length frequency analysis of antarctic fish species [1995, eng] **B-55503**
Life cycle strategies of competitive antarctic fish [1996, eng] **B-55119**
Macroalgal community ecosystems in Potter Cove, Antarctica [1996, eng] **B-56290**
Microbial sea ice ecology at a coastal antarctic site [1996, eng] **B-55216**
Mollusc population dynamics on the antarctic shelf ocean bottom [1993, eng] **B-54460**
New records of fish infection off Heard Island [1996, eng] **B-55788**
Pelagic bryozoan from Antarctica [1995, eng] **B-54064**
Photoacclimation of antarctic marine diatoms to solar ultraviolet radiation [1996, eng] **B-56289**
Photosynthetic characteristics of antarctic macroalgae [1996, eng] **B-56288**
Planktic foraminifera in the subantarctic Atlantic [1996, eng] **J-55695**
Polychaetes collected by "Polarstern" antarctic cruise in 1984 [1988, ger] **B-55487**
Prey composition and daily rations of myctophid fishes in the southern ocean [1996, eng] **B-55280**
Sea urchin growth in McMurdo Sound, Antarctica [1995, eng] **B-54903**
Seasonal amphipod trophodynamics in the South Georgia region [1996, eng] **B-55282**
Seasonal changes of subantarctic benthic bacterial communities [1995, eng] **B-54131**

Seasonal lipid storage as overwintering strategy of antarctic krill [1996, eng] **B-55281**
Shoot water content of maritime antarctic mosses [1996, eng] **B-55469**
Signy Island, Antarctica nudibranch diet and distribution [1996, eng] **B-56017**
South Georgia Islands acoustic targets during seasonal krill scarcity [1996, eng] **B-55795**
Stomach contents of a stranded whale [1995, eng] **B-54756**
Study of four South Georgia molluscs [1995, eng] **B-54817**
Summer marine algae biomass from Ross Sea, Antarctica [1996, eng] **B-55811**
Systematics of some antarctic *Idmidronea* and *Exidmonea* (Bryozoa: Cyclostomata) [1996, eng] **B-55993**
Taxonomy and ecology of the ciliate fauna of the Weddell Sea [1995, eng] **B-54252**
Water soluble substances in terrestrial antarctic plants and microbes [1989, eng] **B-55649**

GEOLOGICAL
Antarctic meteorite newsletter, Vol.19, No.1, Feb. 1996 [1996, eng] **E-54749**
Antarctic Peninsula low-grade metamorphism [1996, eng] **E-56178**
Antarctic search for meteorites project of 1993-1994 [1994, eng] **E-54092**
Collection of Yamato meteorites by JARE-35 [1996, eng] **E-55663**
Early Cambrian archaeocyaths from glacial erratics of King George I. [1996, eng] **E-55905**
Early Cambrian trilobites from the Shackleton Limestone [1995, eng] **E-54253**
Early palynostratigraphy of the Heimefront Range [1995, eng] **E-54301**
Newsletter [1996, eng] **E-55989**
Paleoenvironmental import of Antarctic Peninsula palynological patterns [1996, eng] **E-55042**
Petrology and classification of new antarctic carbonaceous chondrites PCA91082, TIL91722 and WIS91600 [1996, eng] **E-55664**
Remnant of water-rock interaction on the lunar surface [1995, eng] **E-55884**

Spermatophyta
BREEDING CYCLES AND REPRODUCTION
Reproduction of antarctic flowering plants [1996, eng] **B-55312**
EVOLUTION
Comparison of Cretaceous and Cenozoic history of vegetation and climate in high latitudes [1995, eng] **E-55975**
GEOGRAPHIC DISTRIBUTION
Anatomically preserved Permian *Noeggerathiopsis* leaves from east Antarctica [1996, eng] **E-55654**
Morphometric and paleobiogeographic analyses of *Dicroidium* from the Triassic of Gondwana [1995, eng] **E-56336**
Reproduction of antarctic flowering plants [1996, eng] **B-55312**
MORPHOLOGY
Biomass allocation in *Acaena magellanica* [1996, eng] **B-55314**
Fern thickets from the Cretaceous of Alexander I. [1996, eng] **E-55159**
Fossil plant remains from Dufayel I. [1986, eng] **E-56308**
Grapnelispora evansii, Late Cretaceous megaspore from Argentina and Antarctica [1988, spa] **E-56305**
Macroscopic plant remains from Upper Cretaceous and Tertiary of King George I. [1993, pol] **E-55514**
Morphometric and paleobiogeographic analyses of *Dicroidium* from the Triassic of Gondwana [1995, eng] **E-56336**
Polymorphism in a pteridospermous frond from the Jurassic [1993, eng] **E-54380**
Triassic seed fern cupules from Antarctica [1994, eng] **E-54084**
Unusual plant organ from the Triassic of Antarctica [1994, eng] **E-54083**
PATHOLOGY
Mycorrhizal status of *Deschampsia antarctica* in the Palmer Station area, Antarctica [1995, eng] **B-55774**
Wound response in antarctic fossil trees and paleoenvironment [1996, eng] **E-54968**
PHYSIOLOGY
Biomass allocation in *Acaena magellanica* [1996, eng] **B-55314**
POPULATION
Biomass allocation in *Acaena magellanica* [1996, eng] **B-55314**
Reproduction of antarctic flowering plants [1996, eng] **B-55312**
TAXONOMY
Anatomically preserved Permian *Noeggerathiopsis* leaves from east Antarctica [1996, eng] **E-55654**
Fern thickets from the Cretaceous of Alexander I. [1996, eng] **E-55159**
Morphometric and paleobiogeographic analyses of *Dicroidium* from the Triassic of Gondwana [1995, eng] **E-56336**
Polymorphism in a pteridospermous frond from the Jurassic [1993, eng] **E-54380**

New species of polychaete from Hope Bay [1994, ger] **B-55500**
One n.gen. and 2 n.sp. of Tubificidae (Oligochaeta) from the Ross Sea [1996, eng] **B-55962**
Polychaetes collected by "Polarstern" antarctic cruise in 1984 [1988, ger] **B-55487**
Polychaetes from Elephant I., 1985: Acrocirridae to Sabellidae [1991, ger] **B-55496**
Review of Echiura and its geographic distribution [1996, eng] **B-55338**
SEM study of ciliary sense organs in chaetognaths [1989, chi] **B-55736**
Six new species of *Grania* from the Ross Sea [1996, eng] **B-55317**
Synaptonemal complexes of the meiotic parthenogenetic nematode *Panagrolaimus davidi* [1996, eng] **B-56115**
Tetraphyllidean cercoids from bony fishes occurring in the Ross Sea (Antarctic) [1994, eng] **B-55003**
Vegetative reproduction of polychaetes from Elephant I. [1994, ger] **B-55499**

NUTRITION
Competition in encrusting antarctic bryozoan assemblages [1996, eng] **B-56054**

PHYSIOLOGY
SEM study of ciliary sense organs in chaetognaths [1989, chi] **B-55736**
Synaptonemal complexes of the meiotic parthenogenetic nematode *Panagrolaimus davidi* [1996, eng] **B-56115**

POPULATION
Chaetognatha in waters northwest of the Antarctic Peninsula [1989, chi] **B-55737**
Colonisation and development in encrusting communities from the Antarctic intertidal and sublittoral [1996, eng] **B-56053**

Competition in encrusting antarctic bryozoan assemblages [1996, eng] **B-56054**
Depth distribution of soil nematodes in Taylor Valley, Antarctica [1994, eng] **B-54692**
Distribution of Chaetognatha off Queen Maud Land, Antarctica [1992, eng] **B-54952**
Distribution patterns of microfauna on Queen Maud Land nunataks [1996, eng] **B-54728**
Fresh- and salt-water Rotifers and Crustaceans of Antarctica [1993,] **B-56036**
Infralittoral Bryozoa associated to macroalgae from Terra Nova Bay [1991, eng] **B-54196**
Polychaetes of the Weddell Sea [1996, ger] **B-54679**
Six new species of *Grania* from the Ross Sea [1996, eng] **B-55317**
Soil and nematode distribution in Taylor Valley [1994, eng] **E-54714**
Sponges and other fauna of the Weddell Sea [1996, ger] **B-56129**
TAXONOMY
Antarctic cheilostomatous bryozoa [1995, eng] **B-56314**
Antarctic polychaetes in 1984: Cirratulidae to Serpulidae [1989, ger] **B-55491**
Cellariiform and flustriform microporellid Bryozoa from Antarctica [1989, spa] **B-54195**
Chaetognatha in waters northwest of the Antarctic Peninsula [1989, chi] **B-55737**
Deontostoma species from subantarctic coasts (Nematoda, Leptosomatidae) [1995, eng] **B-54637**
Description of *Lecithochirium whitei* n.sp. from the fish *Bathylagus antarcticus* [1994, eng] **B-55002**
Eudorylaimus Andrássy, 1959, n.sp. from East Antarctica [1996, eng] **B-54726**
Infralittoral Bryozoa associated to macroalgae from Terra Nova Bay [1991, eng] **B-54196**
Keys to species of Polychaeta from Marion and Prince Edward Is., 1982-1989 [1994, eng] **B-54174**
Morphology and occurrence of a parasitic nematode in antarctic and subantarctic fishes [1996, eng] **B-55526**
New genus of antarctic piscicolid leeches [1994, rus] **B-55515**
New myzostomid from the antarctic ophiuroid *Ophiacantha disjuncta* [1995, eng] **B-55483**
New species of polychaete from Hope Bay [1994, ger] **B-55500**
One n.gen. and 2 n.sp. of Tubificidae (Oligochaeta) from the Ross Sea [1996, eng] **B-55962**
Polychaetes collected by "Polarstern" antarctic cruise in 1984 [1988, ger] **B-55487**
Polychaetes from Elephant I., 1985: Acrocirridae to Sabellidae [1991, ger] **B-55496**
Polychaetes of the Weddell Sea [1996, ger] **B-54679**
Review of Echiura and its geographic distribution [1996, eng] **B-55338**
Six new species of *Grania* from the Ross Sea [1996, eng] **B-55317**
Tetraphyllidean cercoids from bony fishes occurring in the Ross Sea (Antarctic) [1994, eng] **B-55003**
Visibility
Light dispersion and horizontal transparency in the surface boundary layer of the polar regions [1993, rus] **I-54958**
Seasonal cycle of cloud cover at the poles observed in moonlight [1995, eng] **I-56243**
VLF emissions
Auroral radio emissions observed at AGO-P2 [1994, eng] **K-55144**
Cyclotron absorption of whistler signals [1996, eng] **K-55924**
Programmable and low-power ELF/VLF receiver for automatic geophysical observatories [1994, eng] **K-55143**
Relationship between the θ-aurora and ULF emissions at high latitudes [1993, rus] **K-54956**
Seasonal variations of quasiperiodic VLF emissions [1994, eng] **K-55125**
ULF modulation of ELF-VLF emissions close to the magnetospheric boundary [1994, eng] **K-54396**
Upper atmosphere physics at Showa Station in 1993 [1996, eng] **K-55200**
Upper atmosphere physics at Showa Station in 1994 [1996, eng] **K-55201**

Re-appraisal of the British Graham Land Expedition 1934-1937 [1996, eng] **D-55004**
Recent climate variability in the vicinity of the Antarctic Peninsula [1994, eng] **I-54392**
Redescription of *Maxilliphimedia longipes* (Walker, 1906) from the Antarctic Peninsula [1991, eng] **B-55057**
Science in Antarctica [1982, eng] **A-55648**
Sea-air exchange of sulfur, phosphorus, and nitrogen in marine aerosols over the Antarctic Peninsula waters [1989, chi] **I-55724**
Sediment descriptions, USAP cruise 11, 1992 [1996, eng] **E-56260**
Seismicity around the Antarctic Peninsula [1995, eng] **L-54616**
Sources and distribution of sulfate in the Pacific atmosphere [1989, chi] **I-55760**
Stable isotope composition of larval krill and its winter food sources [1996, eng] **B-55980**
Structural features of the northeastern sector of the Antarctic Peninsula [1993, spa] **E-54533**
Study of snowflakes in antarctic clouds [1996, eng] **F-55001**
Sulfide oxidation products in the antarctic atmosphere [1996, eng] **I-55306**
Summer activities of several bacterial exoenzymes in the western Antarctic Peninsula [1994, eng] **B-54707**
Tectonics and paleomagnetism of Early Tertiary volcanics at South Shetland Is. [1995, eng] **E-54566**
Temporal variability of precipitation over the western Antarctic Peninsula [1995, eng] **I-56226**
Trachythyone baja n.sp. from Antarctica [1987, eng] **B-55486**
Ultraviolet radiation in the southern seas in early spring 1993 [1994, eng] **F-54833**
Water soluble substances in terrestrial antarctic plants and microbes [1989, eng] **B-55649**
Weather forecasting for antarctic air and sea operations [1995, eng] **I-55285**

Anvers Island
Bacterium from Palmer Peninsula waters [1996, eng] **B-55925**
Cleaning up the pollution caused by the sinking of the *Bahia Paraiso* [1990, spa] **J-55275**
Long range development plan, Palmer Station [1984, eng] **G-55882**
Primary productivity *in situ* inhibition due to ultraviolet radiation [1994, eng] **B-54836**
Study of brash ice in the proximal marine zone of a sub-polar tidewater glacier [1996, eng] **F-55540**

Arctowski Peninsula
Geology of Gerlache Strait—Arctowski Peninsula [1995, eng] **E-55575**

Arctowski Station
Analysis of soil microbial communities at Arctowski Station [1996, eng] **B-55463**
Arctowski Antarctic Station (AAS), 1988-1991 [1993, eng] **L-54969**
Atmospheric circulation in the region of Arctowski Station, 1986-1989 [1993, eng] **I-54145**
Bioclimatic conditions in the region of Arctowski Station during the summer period [1989, pol] **I-54374**
Level of biomass and chlorophyll content of the plant communities, Arctowski Station [1989, pol] **B-54367**
Twenty-four hour course of wind temperatures at Arctowski Station (King George Island, South Shetlands) [1989, pol] **I-54366**
Wind velocities and frequency of its hourly values at Arctowski Station [1989, pol] **I-54365**

Ardley Island
^{137}Cs areal concentration and vertical distribution in soils from Ardley Island [1995, spa] **E-54979**
Oxygen-minimum layer in waters around the South Shetland Is. and Ardley I. in summer [1989, chi] **J-55722**

Argentine Islands
Semidiurnal tide oscillations of the antarctic lower thermosphere [1996, eng] **K-56024**
Two further bipolar lichens [1995, eng] **B-54259**

Argus, Dome
Astrophysical value of continuous photometric monitoring from the Antarctic Plateau [1996, eng] **K-55174**
Why Antarctica? [1996, eng] **K-55172**

Armitage, Cape
Chemical ecology of three antarctic gastropods [1994, eng] **B-54283**

Arrival Heights
1989 ozone hole [1991, eng] **I-55620**
Ground-based aerosol measurements at Arrival Heights, Antarctica [1996, eng] **I-55697**

Arthur Harbor
Antarctic phytoplankton and DNA library from communities exposed to ultraviolet-B [1994, eng] **B-54843**
Large diatom bloom impact on macronutrient distribution in Arthur Harbor, summer 1991-1992 [1994, eng] **B-54709**
Melting rates of brash ice in Arthur Harbor [1994, eng] **F-54150**
Removal of hydrocarbons from the *Bahía Paraiso* [1994, eng] **G-54868**
Sedimentation at a tidewater glacier in Arthur Harbor [1994, eng] **E-54151**

Artigas Station
Uruguay in antarctica: a new horizon, a challenge [1994, spa] **A-54826**
Uruguay's national report to SCAR No.6, 1995 [1995, eng] **A-54743**

Asuka Station
Development of a wind turbine system for Antarctica [1992, eng] **G-54574**
Measuring snow particle size from video radar images [1995, eng] **F-54248**
Systematic analysis of auroral conjugacy [1996, eng] **K-55375**

Auckland Islands
Beak length of arrow squids between Stewart and Auckland Is. [1996, eng] **B-54730**

Auster Glacier
Food and energy intake rates of emperor penguins rearing chicks [1996, eng] **B-54553**

Austkampane Hills
Mineral paragenesis of the sapphirine-bearing rock from Austkampane Hills [1995, eng] **E-54619**

Bailey Peninsula
Species distribution within a moss bed in Greater Antarctica [1987, eng] **B-56204**

Balleny Islands
New antarctic coelenterate species [1996, eng] **B-55802**

Beacon Valley
Implications of Pleistocene diatom sediments for antarctic glaciation [1996, eng] **E-54674**

Beardmore Glacier
Beardmore Glacier glacigenic succession, Transantarctic Mountains [1996, eng] **E-55682**

Beauchêne Island
Oribatid mites from the Falkland Is. [1995, eng] **B-54056**

Beaver Lake
Anatomically preserved Permian *Noeggerathiopsis* leaves from east Antarctica [1996, eng] **E-55654**
Copepods of Beaver Lake [1993, eng] **B-54993**

Belgrano II Station
Ground-based observations of the ozone hole in Antarctica [1995, eng] **I-54775**
Installation of the J.L. Sersic astronomical observatory at 78° South [1996, eng] **K-55179**

Bellingshausen Sea
Antarctic ice sheet melting in the southeast Pacific [1996, eng] **F-55217**
C-band radar backscatter from antarctic first-year sea ice. 1 [1995, eng] **F-55638**
C-band radar backscatter from antarctic first-year sea ice. 2 [1995, eng] **F-55639**
Carbon-13 in algal and sedimentary biomarkers from the Amundsen and Bellingshausen Seas [1994, eng] **J-54160**
Copepod feeding behavior, Bellingshausen Sea [1995, eng] **B-54123**
Cruise ANTARKTIS XII/4 of RV *Polarstern* in 1995: CTD-report [1995, eng] **J-54239**
Dimethysulfide, algal pigments and light in an antarctic *Phaeocystis* sp. bloom [1995, eng] **B-54904**
Environmental conditions and krill aggregated distribution [1989, chi] **B-55730**
Expedition ANTARKTIS-XI/3 of *Polarstern* in 1994 [1996, ger] **L-54899**
Fall birds and mammals in the Amundsen and Bellingshausen Seas [1994, eng] **B-54161**
Geochemistry of glacial marine sediments from the Bellingshausen Sea [1994,

eng] E-54274
Geostrophic circulation and satellite tracked buoys in the Bellingshausen Sea [1990, eng] J-55945
Holocene glacial marine sediments in the Palmer Deep Basin [1993, eng] E-54748
Ice-core analysis for sea-ice development in Ross, Amundsen and Bellingshausen seas, 1993 and 1994 winters [1995, eng] F-55635
Life strategies of a Bellingshausen Sea copepod [1996, ger] B-56131
Near-surface vorticity, convergence and synoptic depression tracks over the Bellingshausen Sea [1994, eng] I-54376
Observations on carnivorous feeding in Antarctic calanoid copepods [1995, eng] B-54649
Oceanographic expedition to the Amundsen and Bellingshausen Seas [1994, eng] J-54157
Pack-ice seal activities, Feb.-Apr. 1994 [1994, eng] B-54162
Radiolaria in surface sediments off the northwest Antarctic Peninsula [1989, chi] B-55745
Relationship between oceanographic characteristics and krill around the South Shetland Is. [1989, chi] J-55707
Sea ice and snow thickness in antarctic seas, winter 1993-94 [1995, eng] F-55636
Sea ice extent and surface mass accumulation in Amundsen, Bellingshausen and Weddell seas [1993, eng] F-54517
Sea-ice evolution in the Amundsen and Bellingshausen Seas [1994, eng] F-54158
Semiannual cycle and sea ice extent in the southern ocean [1995, eng] F-56227
Spatial and temporal variability in southern ocean sea ice coverage [1993, eng] F-55227
Ultraviolet radiation in the southern seas in early spring 1993 [1994, eng] F-54833
UV radiation and photosynthesis in the Bellingshausen Sea [1993, eng] B-55099
Water masses and circulation around the South Shetland Islands in summer [1989, chi] J-55706
Winter investigations in the Ross, Amundsen and Bellingshausen seas, 1993-1995 [1995, spa] F-54257

Bellingshausen Station
Highest usable frequencies on the Bellingshausen-Molodezhnaya path in winter [1991, rus] K-54170
Spectral deviations of HF signals in antarctic radio lines [1991, rus] K-54169

Berkner Island
Berkner Island Ice Core Project [1995, eng] F-56076
Borehole logging of physical ice properties on Berkner I. [1995, eng] F-56066
Electrical logging and initial dating of ice cores from Berkner 94/95 [1995, eng] F-56074
Employment of ERS-1 SAR interferometry in Antarctica [1994, fre] C-55804
First results of short pulse radio echo sounding on the top of Berkner Island [1995, eng] F-56086
German Filchner V Campaign in 1995: results from Berkner I. [1995, eng] F-56079

Bernardo O'Higgins Station
Geodetic work at the ERS/VLBI Station O'Higgins [1995, eng] G-56080

Bertrab Nunatak
Wilson's Storm Petrels breeding at the Bertrab Nunatak [1995, eng] B-54478

Bird Island
Body composition of antarctic fur seals [1996, eng] B-54261
Body condition and composition in female antarctic fur seals [1995, eng] B-54201
Comparison of antarctic krill caught by nets and taken by macaroni penguins [1996, eng] B-56186
Determination of energetics and physiology of penguins and seals [1995, eng] B-54892
Duration of pregnancy in fur seals [1996, eng] B-54901
Energy expenditure of free-ranging black-browed albatrosses [1995, eng] B-54186
Fishing hooks and albatrosses at Bird I., 1992-1993 [1995, eng] B-54470
Food and growth in fur seal pups [1996, eng] B-55197
Foraging behaviour and energetics of wandering albatrosses brooding chicks [1996, eng] B-55592
Lévy flight search patterns of wandering albatrosses [1996, eng] B-55624
Milk composition annual variation in antarctic fur seals [1995, eng] B-54114
Oiled penguins observed at Bird Island, South Georgia [1995, eng] B-54474
Relationship between foraging behaviour and energy expenditure in antarctic fur seals [1996, eng] B-55938
Speed and time during seals' foraging dives [1995, eng] B-55098

Bird, Cape
Detection of avian malaria infections in wild and captive penguins [1995, eng] B-54191
Satellite telemetry of the winter migration of Adèlie penguins (*Pygoscelis adeliae)* [1996, eng] B-54729

Bismarck Strait
Bacterium from Palmer Peninsula waters [1996, eng] B-55925

Black Island
Antarctic alternative energy summary [1994, eng] G-54874

Blackburn, Mount
Location of blue ice runway sites—report on air photo search [1988, eng] E-55942

Boeckella, Lake
Chlorophyll-*a* summer vertical distribution in Boeckella Lake [1996, eng] B-55588

Bonney, Lake
Chemical and heat evolution of Lake Bonney [1996, eng] E-55443
Inorganic geochemistry and calcium carbonate dynamics [1994, eng] E-54718
Phytoplankton nutrient deficiency in Taylor Valley lakes [1994, eng] B-54719
Phytoplankton winter-spring biomass and productivity in Lake Bonney [1996, eng] B-54725

Borg Massif
Bacterial production in antarctic soils [1996, eng] B-54605

Botany Bay
Geochemistry of the Trinity Peninsula Formation in Botany Bay [1993, spa] E-54528
Polymorphism in a pteridospermous frond from the Jurassic [1993, eng] E-54380
Water in lichens at subzero temperatures [1995, eng] B-54304

Bransfield Strait
Alkane and aromatic hydrocarbons in sea sediments near the antarctic Peninsula [1989, chi] E-55717
Amphipod fauna of the South Shetlands and Bransfield Strait [1995, eng] B-56190
Antarctic benthic ostracods II. Part 2: Elephant I. and Bransfield Strait [1987, ger] B-55485
Antarctic krill in waters northwest of the Antarctic Peninsula [1989, chi] B-55727
Behavior of mercury in seawater to the northwest of the Antarctic Peninsula [1989, chi] J-55723
Biochemical composition and inorganic elements of krill [1989, chi] B-55740
Chaetognatha in waters northwest of the Antarctic Peninsula [1989, chi] B-55737
Chemical characteristics of water masses in the Bransfield Strait [1989, chi] J-55715
Cirripedia (Crustacea) in waters northwest of the Antarctic Peninsula [1989, chi] B-55733
Copepoda from the water area northwest of the Antarctic Peninsula [1989, chi] B-55734
Crustal transitions in the Bransfield Trough and the South Scotia Ridge [1995, eng] E-54691
Cyclopoida of the Bransfield Strait [1993, eng] B-54136
Environmental conditions and krill aggregated distribution [1989, chi] B-55730
Geodetic work at the ERS/VLBI Station O'Higgins [1995, eng] G-56080
Geology of the Bransfield Basins [1996, eng] J-55674
Geomorphology of the shelf of the South Shetland Islands within the limits of Bransfield Strait [1989, pol] E-54363
Geophysical investigations in Bransfield Strait and the South Shetland Is. [1993, spa] E-54513
Glacial-interglacial depositional model in Bransfield Basin [1994, eng] E-54273
Heterotrophic bacteria, yeasts and fungi in waters northwest of the Antarctic Peninsula [1989, chi] B-55741
Hydrocarbons in sediments from Bransfield Strait [1996, chi] E-55325
Hydrocarbons in surface sediments of the Bransfield Strait [1996, eng] E-55785
Hydrocarbons in the antarctic marine environment: monitoring and background [1994, eng] J-54388
Hydromedusae and Siphonophora from the water area northwest of the Antarctic Peninsula [1989, chi] B-55728
Kerogen in surface sediments from Bransfield Strait [1995, chi] E-54597
Late Pleistocene glaciomarine sedimentation in Bransfield Strait [1995, chi] E-54589
Measurement of planktonic respiration levels in antarctic coastal waters [1996, eng] B-54896
Nutrient cycle in the Bransfield Strait [1989, chi] J-55716
Oceanographic investigations in the southern Bransfield Strait, 1987-1989 [1990, spa] J-55254
Perspective on Brazilian drifting buoys positioned by satellites in low orbit [1990, por] J-55944
Phytoplankton community and water masses northwest of the Antarctic Peninsula [1989, chi] B-55732
Phytoplankton composition, biomass and distribution in Bransfield Strait, Feb. 1993 [1995, eng] B-54650
Phytoplankton, chlorophyll-*a* and krill distribution in waters northwest of the Antarctic Peninsula [1989, chi] B-55731
Polychaetes collected by "Polarstern" antarctic cruise in 1984 [1988, ger] B-55487
Problems in geodynamic studies of Antarctica [1989, pol] E-54356
Psychrophilic and psychrotrophic respiratory metabolism in antarctic

microplankton [1996, eng] B-55961

Radiolaria in surface sediments off the northwest Antarctic Peninsula [1989, chi] B-55745

Relationship between oceanographic characteristics and krill around the South Shetland Is. [1989, chi] J-55707

Study of the surface circulation to the north of Bransfield Strait, Antarctica [1992, spa] J-55694

Two new acanthonotozomatids from the Bransfield Strait [1988, ger] B-55488

Water masses and circulation around the South Shetland Islands in summer [1989, chi] J-55706

Wind-induced circulation in the Bransfield Strait from ERS-1/WSC data [1994, eng] J-55780

Bratina Island

Biogenic organic compounds in ponds on the McMurdo Ice Shelf [1996, eng] B-54554

Light adaptation of cyanobacteria [1993, eng] B-54991

Brattstrand Bluffs

Crustal melting of migmatites from Brattstrand Bluffs, East Antarctica [1996, eng] E-55077

Breid Bay

Downward fluxes of fatty acids and hydrocarbons in Breid Bay in summer [1996, eng] B-56257

Brimstone Peak

Geochemistry of volcanic ash in the ice near Brimstone Peak [1994, eng] E-54080

Brown Bluff

Evolution of an englacial volcano: Brown Bluff, Antarctica [1994, eng] E-54395

Products of subglacial volcanic eruptions under different ice thicknesses [1994, eng] E-54383

Budd Coast

Western *vs.* Mediterranean diets in Antarctica [1996, eng] H-55399

Bunger Hills

Atmospheric transparency and the stress of direct solar radiation in the Arctic and Antarctic [1989, pol] I-54364

Bacterial photosynthetic and dark CO_2 assimilation in the lakes of Bunger Hills [1995, eng] B-54657

Bunger Hills—its genesis and some physiogeographical problems [1989, pol] E-54355

Climatology and perennial lake ice at Bunger Hills [1996, eng] F-55602

Detection of methylotrophs by amplification of the *moxF* gene fragment [1995, eng] B-54741

Detection of the ribulose bisphosphate carboxylase gene [1995, eng] B-54742

Grenville-age belts and associated older terranes in Australia and Antarctica [1995, eng] E-54908

Byers Peninsula

Antioxidant enzymes in larvae of the antarctic fly, *Belgica antarctica* [1996, eng] B-55537

Terrestrial arthropod fauna of the Byers Peninsula: Collembola [1996, eng] B-55188

Byrd Glacier

Upper Carboniferous and Permian rock stratigraphy between the Byrd and Nimrod Glaciers [1994, eng] E-54087

Byrd Station

Design of undersnow facilities for Byrd Station [1962, eng] G-54670

Earth's atmospheric record in ice cores [1995, eng] I-55097

On the age vs depth and optical clarity of deep ice at the South Pole [1995, eng] F-54065

Relevance of glacial bed debris to glacial mechanics [1996, eng] E-55544

Byrd Subglacial Basin

Magnetotelluric profiling of rift dormancy beneath West Antarctica [1996, eng] E-56021

Byrd, Mount

Volcanic history of Mount Sidley [1994, eng] E-54394

Calmette, Cape

Latest magmatic manifestations of the Antarctic Peninsula Mesozoic arc at Cape Calmette [1993, spa] E-54530

Campbell Glacier

Geology of the High Grade Metamorphic Complex of Wilson Terrane [1995, eng] E-54929

Campbell Island

Vegetation of subantarctic Campbell Island [1994, eng] B-54231

Canada Glacier

Glacier mass balances of Taylor Valley [1994, eng] F-54713

Casey Bay

Gastropods and bivalves collected by JARE in East Antarctica [1996, eng] B-55457

Casey Station

Antarctic polar cap total electron content at Casey Station [1992, eng] K-54216

Bacterial population in mineral soils from Antarctica and its relations to organic nutrients [1989, pol] B-54368

Casey Airfield project report, summer 89/90 [1990, eng] G-55855

Cement dust contamination and recovery of *Ceratodon purpureus* at Casey Station [1994, eng] B-54268

Delimiters of antarctic lichen communities [1995, eng] B-54663

Freeze thaw effect on an antarctic moss [1995, eng] B-55100

Multistation study of long period geomagnetic pulsations in the polar cleft and cusp [1992, eng] K-54207

Properties of antarctic maritime and coastal soils [1995, eng] E-54237

Reversible photoinhibition in antarctic moss during freezing and thawing [1995, eng] B-54351

Temporal structure of surface weather parameters at Casey, Davis, Mawson and Macquarie Island [1993, eng] I-56138

Western *vs.* Mediterranean diets in Antarctica [1996, eng] H-55399

Cerberus, Mount

Paleomagnetic rocks of the Transantarctic Mountains [1988, eng] L-55211

Charity, Mount

Granitoid petrogenesis in Mount Charity [1996, eng] E-55319

Charlie, Dome

Automated DIMM telescope for Antarctica [1996, eng] K-55182

Earth's atmospheric record in ice cores [1995, eng] I-55097

First results of ^{15}N/^{14}N ratios in nitrate from alpine and polar ice cores [1996, eng] F-54646

Infrared site testing in Antarctica [1996, eng] K-55178

Instrument devoted to the study of mm/sub-mm galactic emission at Dome C [1996, eng] K-55183

Clarence Island

Tectonics of the Antarctic-Scotia plate boundary in West Antarctica [1996, eng] E-56049

Clarie Coast

Topography of the continental margin off Wilkes Land [1995, eng] E-54628

Clark Peninsula

Delimiters of antarctic lichen communities [1995, eng] B-54663

Uptake of water from the atmosphere by lichens in continental Antarctica [1995, eng] B-55538

Coats Land

Bruce and the SNAE [1992, eng] A-54404

Geology of the Shackleton Range and Coats Land nunataks [1994, eng] E-54072

Cockburn Island

Pliocene foraminifera from the *Pecten* Conglomerate of Cockburn I. [1996, eng] E-55912

Pliocene Ostracoda from the *Pecten* Conglomerate of Cockburn I. [1996, eng] E-55913

Collins Harbor

Baseline heavy metal concentrations in clams from Maxwell Bay [1996, eng] B-56300

Comandante Ferraz Station

Organochlorine residues in antarctic penguins [1990, eng] B-55342

Tissue distribution of PCBs and pesticides in antarctic penguins [1996, eng] B-55595

Twenty years of Brazilian adherence to the Antarctic Treaty [1995, por] A-54744

Commonwealth Glacier

Glacier mass balances of Taylor Valley [1994, eng] F-54713

Corinthian Bay

Fan-delta deposits and platform in the Hidden Lake Formation, Cretaceous of James Ross I. [1993, spa] E-54527

Coulman Island

Natural history of emperor penguin colonies of the Ross Sea, 1993 [1994, eng] B-54294

Creswick Peaks

Early Cretaceous magmatism within the Antarctic Peninsula magmatic arc [1996, eng] E-56294

Croker Passage

Vertical distribution seasonal changes in the *Metridia gerlachei* population, Croker Passage [1993, eng] B-54143

Crozet Islands

Detection of avian malaria infections in wild and captive penguins [1995, eng] B-54191

Endocrinology and the reproductive cycle in King penguins [1996, eng] B-55367

Polar news/Notizie polari, Vol.11, No.4 [1996, ita] A-55366

Seabird and seal consumption of subantarctic marine resources and consumer biomass changes 1962-1985 [1996, eng] B-54551

Supercooling in a subantarctic fly [1996, eng] B-55413

Dakshin Gangotri Station

Pesticide pollution at Dakshin Gangotri [1996, eng] J-55787

Danco Coast

Geology of Gerlache Strait—Arctowski Peninsula [1995, eng] E-55575

David Glacier

Dynamics of David Glacier and its floating Drygalski Ice Tongue [1994, ita] F-54339

Investigation of the Ferrar Supergroup in the area between David Glacier and 76°00'S [1995, eng] E-54933

Davis Bay

Inorganic carbon uptake by an antarctic sea-ice diatom, *Nitzschia frigida* [1996,

eng] B-54465
Davis Islands
Biological survey of the Davis Is. [1996, eng] B-54321
Davis Sea
Fishes from the Davis Sea and Prydz Bay (AzCherNIRO expeditions in 1978 and 1983) [1990, rus] B-56309
Davis Station
Aurora, Dec. 1995, Vol.15, No.2 [1995, eng] A-54264
Aurora, Mar. 1996, Vol.15, No.3 [1996, eng] A-55017
Australian geophysical research [1958, eng] A-55477
Geoelectric field at Davis station, Antarctica [1995, eng] K-54120
Ground based electric field measurements at Davis Station, Antarctica [1992, eng] K-54218
Lipid levels of expeditioners in Antarctica [1995, eng] H-55363
Multistation study of long period geomagnetic pulsations in the polar cleft and cusp [1992, eng] K-54207
OH rotational temperatures at Davis, Antarctica, via scanning spectrometer [1996, eng] I-54644
Propagation of Pc1 magnetic bursts across the polar cap region [1992, eng] K-54210
Quasi periodic scintillation events at southern auroral latitudes [1992, eng] K-54217
Sources and velocities of Pcl-2 ULF waves at high latitudes [1995, eng] K-54976
Temporal structure of surface weather parameters at Casey, Davis, Mawson and Macquarie Island [1993, eng] I-56138
Deception Island
Antarctic fish retina. Histological variations under continuous darkness [1990, eng] B-55343
Antarctic instrumentation. Seismic Digital Net [1990, spa] L-55270
Chinstrap penguin nest defence and offspring number and age [1996, eng] B-56295
Fluvial morphology and streamflow on Deception Island, Antarctica [1995, eng] E-54812
Genesis and evolution of volcanism on Deception I. [1991, eng] E-55762
Geochemistry of fluids on Deception I. [1990, spa] E-55258
Geology of the Bransfield Basins [1996, eng] J-55674
Land of ice and fire [1995, eng] A-55104
Low-velocity layer associated with the latest eruptions on Deception I. [1990, spa] L-55263
Magnetic profiles of the fracture system of northwestern Deception I. [1990, spa] L-55267
Metabolism of breeding chinstrap penguins [1996, eng] B-55103
Micrometeorological phenomena on Deception I. [1990, spa] I-55253
Museum in Antarctica [1996, spa] A-55359
Observation of 5 Blacknecked swans *Cygnus melanocoryphus* in West Antarctica [1990, spa] B-55245
Origin and evolution of volcanic tremors on Deception I. [1990, spa] L-55262
Origin and significance of acid magmas on Deception I. [1993, spa] E-54538
Origin and structure of Deception I. [1990, spa] E-55257
Parent-offspring interactions and feeding chases in the Chinstrap penguin *Pygoscelis antarctica* [1996, eng] B-56199
Petrogenic model for volcanic rocks on Deception I. [1993, spa] E-54545
Seismic activity on Livingston and Deception islands [1990, spa] L-55265
Seismicity around the Antarctic Peninsula [1995, eng] L-54616
Seismo-acoustic studies in a flooded caldera on Deception Island [1989, pol] E-54360
Thermal anomalies of the Deception volcano [1990, spa] E-55260
Thermodynamics of the Deception volcano's soil [1990, spa] E-55261
Volcanic rock enclaves of Kendall Terrace and Murature Bay [1990, spa] E-55259
Volcanic succession at Deception I. [1992, eng] E-56251
Desolation Island
Coexistence between sealers and Fueguinian aborigines on Desolation I., early 19th Century [1995, spa] A-54982
Discovery Bay
Geology of the eastern coast of Discovery Bay, Greenwich Island and the South Shetlands [1989, pol] E-54362
Dolleman Island
Location, movement and reactions of impurities in solid ice [1996, eng] F-55832
Drake Passage
Geomagnetic field and tectonics of the southeast Pacific [1989, chi] E-55755
Heat fluxes across the ACC in the Drake Passage and Scotia Sea [1996, eng] J-56282
Oceanographic study from satellite drifting buoy and hydrographic data [1993, por] J-55943
On the temporal variability of the transport through Drake Passage [1996, eng] J-56046
Phytoplankton biomass, productivity and organic carbon in the southern ocean [1996, eng] B-54683
Phytoplankton composition, biomass and distribution in Bransfield Strait, Feb. 1993 [1995, eng] B-54650
Problems in geodynamic studies of Antarctica [1989, pol] E-54356
Tectonics and climate [1996, eng] J-56291
Wind and thermohaline circulations and the ACC [1996, eng] J-55931
Drygalski Ice Tongue
Dynamics of David Glacier and its floating Drygalski Ice Tongue [1994, ita] F-54339
Dubouzet, Cape
Geology of Cape Dubouzet and the Trinity Peninsula Group [1996, eng] E-56286
Dufayel Island
Fossil plant remains from Dufayel I. [1986, eng] E-56308
Dumont d'Urville Station
Climate at Dumont d'Urville and in Antarctica [1996, fre] I-55425
High-speed network for communication by voice, data video and fax among three antarctic bases [1994, eng] G-54884
Inter-annual variability in marine coastal antarctic bacterioplankton [1996, eng] B-54685
Producing energy for polar stations from the wind-water temperature gradient [1994, eng] G-54871
Psychological selection of wintering-over personnel [1994, eng] H-54876
Rosame: sea-level observation network in antarctic and subantarctic areas [1996, fre] J-56342
Stratospheric ozone and nitrogen dioxide at the poles [1989, eng] I-55847
Dundee Island
New species of tardigrade from the Antarctic [1994, eng] B-54386
Dutholt Point
Breeding birds at Duthoit Point [1995, eng] B-54476
East Antarctica
Annual variations in the meteorological parameters at Jinnah Station, Antarctica [1995, eng] I-54573
Atmospheric surface pressure over the interior of Antarctica [1996, eng] I-55321
Climate of the penultimate ice age according to data from an antarctic ice core [1993, rus] I-54795
Discussion of paper by Shiraishi et al [1995, eng] E-56177
East Antarctic Ice Sheet development during the Middle Miocene climatic transition from 16 to 12 Ma [1993, eng] F-56133
East Antarctic Seismic Traverse, 1993-1994 [1994, eng] E-54089
Holocene climate changes recorded in an East Antarctica ice core [1996, eng] F-55917
Ice core carbon monoxide data of Greenland and Antarctica atmospheres [1996, eng] I-56007
Ice flow observations along traverse routes from the coast to Dome Fuji [1995, eng] F-54044
Kannack complex of the Indochina Block—a possible fragment of Gondwanaland [1993, eng] E-55557
Kenyan paleomagnetic data implications for Gondwana assembly [1996, eng] L-55474
Modeling and observational study of East Antarctic surface mass balance [1996, eng] I-54400
Neogene East Antarctic ice sheet: a dynamic or stable feature? [1995, eng] F-55923
On the relationship between extra-terrestrial radiation and surface pressure [1996, eng] I-55604
Preliminary model for the 500 Ma event in the East Antarctic Shield [1993, eng] E-55553
Reconnaissance apatite fission-track data from the East Antarctic Shield [1993, eng] E-55571
Review of the Precambrian geology of Sri Lanka and its comparison with Antarctica [1993, eng] E-55551
Sea ice thickness observations from East Antarctica [1994, eng] F-56005
Shallow ice coring and borehole casing at Dome Fuji Station, East Antarctica [1995, eng] F-54048
Southwest Pacific paleoceanography and development of the East Antarctic Ice Sheet [1995, eng] J-54267
Structure and evolution of the Antarctic shield in Precambrian [1993, eng] E-55555
Synopsis of *Pareledone* and *Megaleledone* species, with description of 2 n.sp. from East Antarctica [1994, eng] B-55049
East Ongul Island
Ground temperature and frost heave near Showa Station [1995, eng] E-54634
Ekström Ice Shelf
Ablation rates under the Ekström Ice Shelf deduced from different methods [1995, eng] F-56072
Neumayer weather data: 1992, 1993, 1994 [1996, eng] I-54786
Elephant Island
1993-1994 U.S. Antarctic Marine Living Resources program [1994, eng] A-54694
Antarctic benthic ostracods II. Part 2: Elephant I. and Bransfield Strait [1987, ger] B-55485
Antarctic krill (*Euphausia superba* Dana) eat salps [1996, eng] B-55960
Antatelson tuberculatum, new species of Thaumatelson from Antarctica [1989, ger] B-55493
Benthic ostracods from Elephant I. and the Antarctic Peninsula [1989, ger] B-55495

Depletion of inorganic nutrients around Elephant I. [1994, eng] **J-54700**
Development of the parasite *Eubrachiella antarctica* [1993, eng] **B-54141**
Ecosystem of the sea ice in Antarctica [1989, pol] **F-54357**
Krill distribution and abundance near Elephant I., summer 1993-1994 [1994, eng] **A-54695**
Krill stock structure and macrozooplankton abundance near Elephant I., Jan.-Mar. 1994 [1994, eng] **B-54696**
Lateral target strength of antarctic krill [1996, eng] **B-55221**
Mean summer windfield in the area of Elephant I. [1994, eng] **I-54704**
Occurrence of a copepod parasite on the fish *Champsocephalus gunnari* [1993, eng] **B-54142**
Occurrence of net phytoplankton between Elephant I. and the southern passages [1989, pol] **B-54369**
Ostracods *Heterocyprideis sorbyana* found on Elephant I. [1994, ger] **B-55502**
Percentage of gravid female krill found during the "Antártida 86 11" expedition [1990, spa] **A-55240**
Phytoplankton biomass and taxonomy around Elephant I. [1995, eng] **B-54063**
Phytoplankton distribution and species composition around Elephant I., Jan.-Mar. 1994 [1994, eng] **B-54698**
Phytoplankton distribution in different water masses [1994, eng] **B-54699**
Phytoplankton photobiological characteristics around Elephant I. [1994, eng] **B-54697**
Polychaetes from Elephant I., 1985: Acrocirridae to Sabellidae [1991, ger] **B-55496**
Seabeds within the 500m isobath around Elephant I. [1995, eng] **J-54434**
Structure of borel from the South Georgia and South Shetlands region [1989, pol] **B-54371**
Tectonics of the Antarctic-Scotia plate boundary in West Antarctica [1996, eng] **E-56049**
Vegetative reproduction of polychaetes from Elephant I. [1994, ger] **B-55499**

Ellis Fjord
Contribution of fast-ice algae to the spring phytoplankton bloom in Ellis Fjord [1996, eng] **B-55191**
Developmental rate of *Euphausia cristallorophias* larvae in Ellis Fjord [1996, eng] **B-55966**
Diatom preservation comparison in oxic and anoxic basins [1995, eng] **B-55777**

Ellsworth Mountains
Stratigraphy and structure of the northern Heritage Range [1994, eng] **E-54071**

Enderby Land
Paleomagnetic experiments on igneous and metamorphic rocks from Enderby Land [1995, eng] **E-54629**

Erebus, Mount
Argon-40/argon-39 dating of Mount Erebus [1994, eng] **E-54076**
Volcanic activity and seismicity of Mount Erebus, 1986-1994 [1994, eng] **L-54075**

Esperanza Station
Broad band seismology at Esperanza Station [1995, eng] **L-56134**
Broadband seismology in the Scotia Arc [1995, eng] **L-54951**
Potable water characteristics at Esperanza Station [1993, spa] **G-54537**

Evans, Cape
Discovery of a novel R-phycoerythrin from an antarctic red alga [1996, eng] **B-56249**

Explorers Cove
Classification uncertainties within foraminifera species in McMurdo Sound, Antarctica [1995, eng] **B-54446**
Foraminifera of Explorers Cove [1994, eng] **B-54282**
Taxonomy and ecology of the foraminifer *Crithionina delacai* from Explorers Cove [1995, eng] **B-54185**

Ezcurra Inlet
Comparison of investigations carried out in Antarctica and Greenland [1994, ita] **A-54332**

Factory Cove
Decomposition of the macroalga *Desmarestia anceps* [1996, eng] **B-54468**

Falkland Islands
After the Falklands bonanza [1996, eng] **A-54824**
BGS launches Falklands oil licensing [1996, eng] **E-54638**
Dispersal of benthic invertebrates in the Scotia Arc by kelp rafting [1994, eng] **B-54280**
Falkland Islands squid fishery [1996, eng] **A-55792**
Falklands surveys resume with pincer movement [1993, eng] **A-55203**
Genus *Aridius* Motschulsky from subantarctic islands [1995, eng] **B-54411**
Geological mapping, West Falkland Is. [1996, eng] **E-55691**
Macrozooplankton distribution, SW Atlantic [1995, eng] **B-55194**
New data on subantarctic micromolluscs [1988, spa] **B-56262**
Oribatid mites from the Falkland Is. [1995, eng] **B-54056**
Oribatid mites of the Falkland Islands [1996, eng] **B-54955**
Petroleum potential of the Falkland Islands offshore area [1996, eng] **E-55293**
Weather forecasting for antarctic air and sea operations [1995, eng] **I-55285**

Falla, Mount
Triassic seed fern cupules from Antarctica [1994, eng] **E-54084**

False Bay
Orbicular structures in granitoids of the southwestern sector of False Bay [1993, spa] **E-54540**

Faraday Station
Cyclotron absorption of whistler signals [1996, eng] **K-55924**
Ducted whistler-mode signals received at two widely spaced locations [1996, eng] **K-55527**
First Ukrainian antarctic research program [1996, eng] **A-54639**
Ionospheric tomography in Antarctica [1996, eng] **K-55603**
Temporal variability of precipitation over the western Antarctic Peninsula [1995, eng] **I-56226**
Wave-particle interactions [1996, eng] **K-55689**
Year-round column ozone observations at 65°S: validation and polar winter data [1995, eng] **I-54500**

Ferrar Glacier
Glacial geology, McMurdo Sound [1960, eng] **E-55883**

Filchner Ice Shelf
2000 record of the Filchner-Ronne Ice Shelf chemistry [1995, eng] **F-56075**
Approximation of ice sheet from ERS-1 radar altimeter in the Filchner Ronne Ice Shelf [1995, eng] **F-56069**
ARC: a source of multisensor satellite data for polar science [1992, eng] **C-56028**
Deployment of oceanographic-glaciological strings under the Filchner-Ronne-Schelfeis in 1995 [1995, eng] **F-56078**
Drift of the tabular iceberg Filchner 1986A [1993, spa] **F-54512**
Filchner-Ronne Ice Shelf Programme (FRISP), Report No.9 (1995) [1995, eng] **F-56063**
Geochemistry in an area recently uncovered from the Filchner Ice Shelf [1996, eng] **J-55854**
Geoid determination in the Filchner Ronne Ice Shelf [1995, eng] **F-56085**
Glaciological investigations on the Foundation Ice Stream [1995, eng] **F-56073**
Ice-ocean interactions in front of Filchner-Ronne Ice Shelf [1995, eng] **F-56064**
Interaction between ice-shelf cavities and the open ocean [1995, eng] **F-56067**
Landsat and ERS-1 SAR image data analysis of the Filchner-Ronne Ice Shelf [1995, eng] **F-56071**
Review of the airborne radio echo sounding data of the Filchner-Ronne Ice Shelf [1995, eng] **F-56083**
Submarine topographical chart around Filchner-Ronne Ice Shelf [1995, eng] **F-55205**

Fildes Peninsula
Clay minerals in land samples from Fildes Peninsula [1989, chi] **E-55754**
Human impact around polar stations on Fildes Peninsula [1993, eng] **B-54140**
Non-equilibrium process in magmatism of the Fildes Peninsula [1996, chi] **E-55323**
Paleoclimatological evolution from sediment analysis of lakes Hotel, Kitezh and Long [1993, spa] **E-54521**
Pedogenic groups and diagnostic characteristics on Fildes Peninsula [1996, eng] **E-55786**
REE geochemistry of lacustrine deposit on the Fildes Peninsula [1996, chi] **E-55877**
Self organization of nonequilibrium process in magmatism of Fildes Peninsula [1996, eng] **E-55783**
Welded ash tuffs in the northeastern sector of Fildes Peninsula [1993, spa] **E-54535**

Fisher Massif
Geochemistry and origin of volcanic rocks from the Fisher Massif [1996, eng] **E-54558**

Flagstone Bench
Permo-Triassic sedimentation within the Lambert Graben, Prince Charles Mountains [1993, eng] **E-55558**

Flatvaer Islands
Marine fossils and glacial history of raised beach deposits around Lützow-Holm Bay [1995, eng] **E-54632**
Submarine topography around the Flatvaer Is. [1995, eng] **E-54631**

Fleming, Mount
Antarctic marine microfossil transport during the Neogene [1996, eng] **E-55653**
Minimum Pliocene exposure ages for antarctic plateau sediments [1995, eng] **E-54058**

Fletcher Ice Rise
Topographic origin for double-ridge features in visible imagery of ice divides in Antarctica [1995, eng] **F-54067**

Ford Ranges
Paleomagnetic study of the northern Ford Ranges [1996, eng] **E-55006**

Forefinger Point
Sapphirine-bearing silica-undersaturated granulites from Forefinger Point [1995, eng] **E-54623**

Fossil Bluff
Air temperature variability in eastern Alexander I. [1994, eng] **I-54377**

Foster, Port
Origin and significance of acid magmas on Deception I. [1993, spa] **E-54538**

Recent tectonics in the submarine deposits of the Deception I. bay [1990, spa] E-55268
Seismic refraction experiment at Port Foster [1990, spa] L-55264
Study of the magnetic field in Port Foster [1990, spa] L-55266

Foundation Ice Stream
Geodetic fieldwork along Foundation Ice Stream [1995, eng] F-56081

Fremouw Peak
Unusual plant organ from the Triassic of Antarctica [1994, eng] E-54083
Wound response in antarctic fossil trees and paleoenvironment [1996, eng] E-54968

Fryxell, Lake
Glacial meltwater effects on antarctic lake mixing [1996, eng] F-56172
Hydrology of Huey Creek, Taylor Valley [1993, eng] E-54990
Inorganic geochemistry and calcium carbonate dynamics [1994, eng] E-54718
Phytoplankton nutrient deficiency in Taylor Valley lakes [1994, eng] B-54719

Fukuro Cove
Sea ice and ecology of Adélie penguins [1996, jpn] B-56339
Trace elements in tissues of chick and adult Adélie penguins [1996, eng] B-55461

Géologie Archipelago
History and work of the French Antarctic Expedition to Adélie Land 1948-1952 [1953, ger] D-55621
Inter-annual variability in marine coastal antarctic bacterioplankton [1996, eng] B-54685
Marine bacterioplankton and sea ice bacterial seasonal changes [1996, eng] B-54686

Geology, Cape
Gut contents of *Gomphiocephalus hodgsoni* Carpenter at Cape Geology [1996, eng] B-55958

Georg Forster Station
Chemical reactions in the polar stratosphere [1996, ger] I-55034
Volcanic perturbation of the atmosphere in both polar regions: 1991-1994 [1996, eng] I-54486

Georg von Neumayer Station
All-female expedition: a personal perspective [1994, eng] A-55866
Atmospheric boundary layer over Neumayer Station [1996, ger] I-55978
Chemical reactions in the polar stratosphere [1996, ger] I-55034
Clean-up programme of stations of the Alfred Wegener Institute [1994, eng] G-54867
Neumayer weather data: 1992, 1993, 1994 [1996, eng] I-54786
Sulfur hexafluoride—a powerful new atmospheric tracer [1996, eng] I-55304
Untold story: the German all-female overwintering party [1994, eng] A-55862
Volcanic perturbation of the atmosphere in both polar regions: 1991-1994 [1996, eng] I-54486
Waste management concept at the German winter station Neumayer [1994, eng] G-54865

George V Coast
Water temperatures off Oates and George V Coasts [1950, eng] J-55475

Gerlache Strait
Bacterium from Palmer Peninsula waters [1996, eng] B-55925
Feeding incidence and yolk resorption in larval fishes [1994, eng] B-54289
Geology of Gerlache Strait—Arctowski Peninsula [1995, eng] E-55575
Iron stimulation of antarctic bacteria [1996, eng] J-55899
Measurement of planktonic respiration levels in antarctic coastal waters [1996, eng] B-54896

Getz Ice Shelf
Evolving front of the Ross Ice Shelf [1994, eng] F-54272

Goodale, Mount
Location of blue ice runway sites—report on air photo search [1988, eng] E-55942

Gough Island
Fishes of the Tristan da Cunha group and Gough Island, South Atlantic Ocean [1995, eng] B-55310
Reproduction in the female subantarctic fur seal [1995, eng] B-54202

Graham Land
Antarctic Peninsula low-grade metamorphism [1996, eng] E-56178

Granite Harbor
Mackay Glacier and Granite Harbor data [1987, eng] A-55507
Water in lichens at subzero temperatures [1995, eng] B-54304

Great Wall Station
Aerosol composition at the Great Wall Station [1989, eng] I-55519
Major weather features at the Great Wall Station [1989, chi] I-55711
Phytoplankton pigment identification in waters adjacent to the Great Wall Station [1995, eng] B-54568
Radiation and ozone data at Zhongshan and Great Wall stations, 1993-1994 [1995, eng] I-55422
Sedimentary model and dynamic process of the Great Wall Bay coast, Antarctica [1989, chi] E-55749
Submarine topography of the Great Wall Bay [1989, chi] J-55757

Greenwich Island
Geology of the eastern coast of Discovery Bay, Greenwich Island and the South Shetlands [1989, pol] E-54362

Half Moon Island
Dietary associations of the sheathbill *Chionis alba* from Potter Peninsula and Half Moon I. [1993, spa] B-54507
Sedimentation of the tombolos on Half Moon I. [1993, spa] E-54532

Halley Station
British Antarctic Survey Medical Unit [1996, eng] H-56311
Development of a mobile garage/vehicle servicing facility, Halley scientific station [1994, eng] G-54864
Diurnal and seasonal occurrence of polar patches [1996, eng] K-55520
First Dynasonde observations of F-region plasma flow at Halley, Antarctica [1995, eng] K-54117
Ionospheric tomography in Antarctica [1996, eng] K-55603
Numerical simulation of whistler-triggered VLF emissions observed in Antarctica [1996, eng] K-54488
Possible influence of long-term SST-anomalies on the eddy ozone transport [1989, eng] I-55849
Recovery of antarctic ozone hole [1996, eng] I-56332
Solitary wave-turbulence interaction [1995, eng] I-54669
Surface energy and mass balance at Halley, Antarctica during winter [1996, eng] I-55953
Surface energy and water balance over an antarctic ice shelf in winter [1995, eng] F-56219
ULF modulation of ELF-VLF emissions close to the magnetospheric boundary [1994, eng] K-54396
Wave-particle interactions [1996, eng] K-55689

Heard Island
Diet of southern elephant seals *(Mirounga leonina)* from Heard Island [1995, eng] B-54480
Fish distribution and biomass in the Heard I. zone [1995, eng] B-54426
Fish infection by Digenea off Heard Island [1996, eng] B-55789
Implications of Heard Island geochemistry for Indian Ocean mantle [1994, eng] E-54398
New records of fish infection off Heard Island [1996, eng] B-55788
Stomach contents of a stranded whale [1995, eng] B-54756
Supercooling in a subantarctic fly [1996, eng] B-55413
Systemic status of a copepod parasite of antarctic teleosts [1996, eng] B-55455

Heimefront Range
Correction for *in-situ* ^{14}C in antarctic ice with ^{14}CO [1995, eng] F-55164
Early palynostratigraphy of the Heimefront Range [1995, eng] E-54301

Hells Gate
GPS geodetic activities in the 1994-95 antarctic campaign [1995, eng] F-54946
GPS recording of Hells Gate ice shelf tidal responses [1994, eng] F-54653
Strain net and ice flow monitoring of Hells Gate ice shelf [1995, eng] F-54945

Hemmen Ice Rise
Employment of ERS-1 SAR interferometry in Antarctica [1994, fre] C-55804

Heywood Lake
Microbial dynamics in maritime antarctic lakes in summer [1996, eng] B-55393

Hinode, Cape
Ground temperature and frost heave near Showa Station [1995, eng] E-54634
Sm-Nd and Rb-Sr isochron ages for meta-trondhjemites from Cape Hinode, East Antarctica [1995, eng] E-54624
Trace elements in tissues of chick and adult Adélie penguins [1996, eng] B-55461

Hoare, Lake
Development and operation of a photovoltaic power system for use at remote Antarctic sites [1994, eng] G-56135
Inorganic geochemistry and calcium carbonate dynamics [1994, eng] E-54718
McMurdo LTER: Paleolimnology of Taylor Valley, Antarctica [1994, eng] E-54717
Phytoplankton nutrient deficiency in Taylor Valley lakes [1994, eng] B-54719
Primary production model of benthic microbial mats in Lake Hoare [1994, eng] B-54720

Hope Bay
Epilithic algae from a freshwater stream [1996, eng] B-55316
New species of polychaete from Hope Bay [1994, ger] B-55500
Polymorphism in a pteridospermous frond from the Jurassic [1993, eng] E-54380
Substitution of Si^{IV} by Al^{IV} as indicator of consanguineous eruptive rocks at Hope Bay [1993, spa] E-54526
Subvolcanic mesosilicic body at Hope Bay [1993, spa] E-54525

Horseshoe Island
Diatom stratigraphy in the sediments of Skua Lake [1994, eng] E-56303

Howard Glacier
Glacier mass balances of Taylor Valley [1994, eng] F-54713

Huey Creek
Hydrology of Huey Creek, Taylor Valley [1993, eng] E-54990

Hurd Peninsula
Geology of the Miers Bluff Formation, Hurd Peninsula [1994, eng] E-55817
Lead isotope variations on the Antarctic Peninsula [1995, eng] E-54576
Petrology of hypabyssal manifestations in South Bay, Livingston I. [1993, spa] E-54539

Husvik Harbor
Kelp degradation by *Paractora trichosterna* (Thomson) at South Georgia [1996, eng] B-54727
Hut Point
Chemical ecology of three antarctic gastropods [1994, eng] B-54283
Independence Hills
Construction of the map of main study area [1995, eng] C-54914
Moraine observations at the foot of Independence Hills [1995, eng] E-54912
Weathering processes in marbles from Independence and Patriot Hills [1995, eng] E-54913
Indian Ocean
Antarctic bottom topography and its representation on new bathymetric charts [1993, rus] J-55007
Antarctic fishing and its likely development [1993, eng] A-55533
Antarctic neritic krill *Euphausia crystallorophias*: spatio-temporal distribution, growth and grazing rates [1996, eng] B-55161
Carbonyl sulfide concentrations in the surface waters and above the Indian Ocean [1989, eng] J-55853
Deep-sea shrimp from the Antarctic [1996, eng] B-55456
Evolution of the boundary layer over the southern ocean [1994, eng] I-55065
Faunistic makroplankton complexes in the Commonwealth Sea [1993, rus] B-54963
Geomorphology and geological history of Broken Ridge in eastern Indian Ocean [1985, rus] E-56181
Hydrographic changes of the Indian Ocean over the last 230 kyr [1996, eng] J-54861
Indian Ocean zooplankton biochemistry [1995, eng] B-55971
Initial stages of the spreading between Australia and Antarctica based on a propagating rift model [1985, rus] E-56182
Late Eocene-Oligocene paleoceanography in the southern Indian Ocean (ODP Site 744) [1996, eng] J-55056
Longitudinal distributions of dissolved barium, silica and alkalinity in the western and southern Indian Ocean [1996, eng] J-55160
Mineral aerosols at Amsterdam I. and dry deposition in the Indian Ocean [1995, fre] I-55803
Morphological reorganization within the Pacific-Antarctic Discordance [1996, eng] E-54603
Organic carbon transport from subantarctic frontal zones [1995, eng] J-55196
Peridotites from the seamount off Wilkes Land, Antarctica [1995, eng] E-54627
Phytoplankton biomass, productivity and organic carbon in the southern ocean [1996, eng] B-54683
Plankton and physico-chemical parameters in surface waters of the Antarctic [1993, eng] B-54953
Polar news/Notizie polari, Vol.11, No.5 [1996, ita] A-55391
Sketch of hydrographic structure and circulation in the waters near Wilkes Land, Antarctica [1989, chi] J-55708
Southern ocean frontal zones as the main locations of myctophidae and krill concentrations [1993, rus] J-54962
Steroid hormones in female minke whales [1996, eng] B-55405
Tritium content of Indian Ocean surface water and in lakes near Maitri Station [1995, eng] J-55972
Use of seabirds to monitor sea-surface temperatures [1995, eng] J-54200
James Ross Island
Antarctic paleoclimatic records from lake deposits [1996, eng] E-55657
Cretaceous ammonite biostratigraphy on James Ross I. [1993, spa] E-54523
Fan-delta deposits and platform in the Hidden Lake Formation, Cretaceous of James Ross I. [1993, spa] E-54527
Holocene volcanic activity on James Ross Island [1993, spa] E-54544
Structural features of the northeastern sector of the Antarctic Peninsula [1993, spa] E-54533
Jason Peninsula
Rapid collapse of northern Larsen Ice Shelf, Antarctica [1996, eng] F-54240
Jetty Peninsula
Mesozoic alkaline-ultrabasic magmatism of Jetty Peninsula [1993, eng] E-55567
Permo-Triassic sedimentation within the Lambert Graben, Prince Charles Mountains [1993, eng] E-55558
Joinville Island
Development of the parasite *Eubrachiella antarctica* [1993, eng] B-54141
Juan Carlos I Station
Alternative energy at the Juan Carlos I Station [1994, eng] G-54873
Spanish antarctic research program, 1991-1992 [1991, spa] A-56027
Kerguelen Archipelago
Seasonal changes of subantarctic benthic bacterial communities [1995, eng] B-54131
Kerguelen Islands
Albatrosses feeding on squid as indicators of marine resources in Kerguelen waters [1995, eng] B-54651
Completely direct development of an echinoid [1996, eng] B-55615
Detection of avian malaria infections in wild and captive penguins [1995, eng] B-54191
Gondwanian implications of Australian basalt petrogenesis [1996, eng] E-56179
Hotspots in Kerguelen xenoliths [1996, eng] E-55226
Ionospheric Trimpi events recorded at Kerguelen [1996, eng] K-55523
Lesser Sheathbill's life traits in contrasting habitats [1996, eng] B-56198
Noble gases related to ultramafic xenoliths [1996, eng] E-55193
Population changes of elephant seals on Kerguelen Is. during the past 30yr. [1985, eng] B-56197
Restoration programs on Amsterdam I. and the Kerguelen Is. [1996, fre] B-56344
Seabird and seal consumption of subantarctic marine resources and consumer biomass changes 1962-1985 [1996, eng] B-54551
Seabird interaction with trawl and longline fisheries [1996, eng] A-56101
Seabird mortality in Kerguelen waters [1996, eng] B-54449
Seasonal phytoplankton changes in the Kerguelen Islands [1996, eng] B-56041
Spatial distribution of *Abatus cordatus* [1995, eng] B-55199
Spawning, hatching and growth of *Champsocephalus gunnari* around the Kerguelen Is. [1995, eng] B-54427
Subantarctic sulfate-reducing bacteria and some physicochemical and biological parameters [1986, fre] B-56275
Supercooling in a subantarctic fly [1996, eng] B-55413
Kerguelen Plateau
Cenozoic glaciation: the marine record established by ocean drilling [1992, eng] E-56175
Fish distribution and biomass in the Heard I. zone [1995, eng] B-54426
Geomorphology and geological history of Broken Ridge in eastern Indian Ocean [1985, rus] E-56181
Infrared spectrometry of biogenic silica, smectites and plagioclases in sediments from the Kerguelen Plateau [1991, fre] E-56304
Rig seismic research cruise 2: Kerguelen Plateau [1986, eng] E-56259
Rosame: sea-level observation network in antarctic and subantarctic areas [1996, fre] J-56342
King George Bay
Review of Tertiary glaciation in King George Bay [1990, eng] E-55348
King George Island
Antarctic benthic ostracods 7: from King George I. [1991, ger] B-55498
Antarctic species of the genus *Munna* Krøyer, 1839 [1994, eng] B-56052
Benthos and fish associated with submerged drifting algae in Fildes Bay [1996, eng] B-55460
Cape Melville Formation: Lower Miocene glaciomarine deposits on King George I. [1995, eng] E-54751
Chromosome count in mosses from King George I. [1995, chi] B-54585
Dating of volcanic rocks on King George I. [1995, chi] E-54580
Distribution and numbers of fur seals on King George I. [1987, eng] B-56264
Distribution, abundance and biology of the tern *Sterna vittata* from King George I. [1995, eng] B-55484
Early Cambrian archaeocyaths from glacial erratics of King George I. [1996, eng] E-55905
Early Cambrian brachiopods from glacial erratics of King George I. [1996, eng] E-55906
Ecosystem of the sea ice in Antarctica [1989, pol] F-54357
Fossil homolodromiid crab from King George I. [1995, chi] E-54595
Four molluscan species from King George Island [1993, ger] B-54297
Genetic diversity in an antarctic fungus [1995, eng] B-55688
Geochemistry of Tertiary volcanics on King George I. [1996, chi] E-55874
Glaciolgical characteristics of the Collins Ice Cap, King George Island, Antarctica [1996, chi] F-56117
Habitats of fish and epibenthic invertebrates in Fildes Bay [1996, eng] B-55459
Holocene environmental change in a sediment sequence from King George I. [1996, eng] E-56276
Holocene evolution on King George Island [1993, eng] A-54994
IgA in elephant seals' milk [1995, eng] B-54450
LARC cosmic ray detector on King George I. [1995, eng] K-54981
Macromycetes of the South Shetland Islands (Antarctica) [1994, eng] B-55578
Macroscopic plant remains from Upper Cretaceous and Tertiary of King George I. [1993, pol] E-55514
Maximum ionospheric electronic concentrations over King George I. and Concepción, Chile [1995, spa] K-54980
Mean summer windfield in the area of Elephant I. [1994, eng] I-54704
Measurements and parameter estimation of clear air and sea echoes in MST radars [1995, eng] I-55074
Moss peat-mounds on King George I. [1993, pol] B-55511
Mosses of King George Island, Antarctica [1990, eng] B-55345
Ocean food web at King George Island [1996, ger] B-55818
Oswaldella shetlandica Stepan'yants, 1979 and *O. elongata* n.sp. (Cnidaria:Hydrozoa) [1995, eng] B-55936
Periglacial landforms on King George Island, Antarctica [1996, eng] E-56089
Pesticide pollution at Dakshin Gangotri [1996, eng] J-55787
Photosynthesis in macroalgae of King George Island [1996, ger] B-55035
Photosynthesis, dark respiration and pigment contents of *Desmarestia menziesii* [1996, eng] B-56256
Photosynthetic characteristics of antarctic macroalgae [1996, eng] B-56288
Plants used in nest-building by gulls and terns on King George and Nelson

- islands [1990, eng] B-55347

Aircraft operation for earth science study in the Yamato Mountains by JARE 35 [1995, jpn] G-54495
Collection of Yamato meteorites by JARE-35 [1996, eng] E-55663
Explanatory text of geological map of the northern Yamato Mountains, Antarctica: (2) Mt. Torimai [1995, eng] E-54764
Geology of the northern Yamato Mountains [1995, eng] E-55857

Queen Maud Land
Air-snow transfer of H_2O and HCHO [1996, eng] I-55826
Bacterial production in antarctic soils [1996, eng] B-54605
Bibliography of terrestrial biological research in Queen Maud Land [1994, eng] B-54181
Century of accumulation and temperature changes in Dronning Maud Land, Antarctica [1996, eng] F-54907
Cratonic and orogenic provinces in Africa and Queen Maud Land [1993, eng] E-55552
Development of the JARE deep ice coring system (II) [1995, jpn] F-54045
Distribution of Chaetognatha off Queen Maud Land, Antarctica [1992, eng] B-54952
Distribution of hydrogen peroxide in surface snow over antarctic ice sheet [1996, eng] F-54489
Distribution patterns of microfauna on Queen Maud Land nunataks [1996, eng] B-54728
Egg size, parental quality, and nestling growth [1996, eng] B-56274
Ice accumulation, western Queen Maud Land [1959, eng] F-55518
Ice shelf structure at Maudheim Station [1958, eng] F-55618
Inland ice and nunataks, Queen Maud Land [1959, eng] F-55517
Isotopic constraints on Pan-African metamorphism in Dronning Maud Land, Antarctica [1996, eng] E-55655
Newly detected ablation phenomenon in Dronning Maud Land, Antarctica [1995, eng] F-56306
Nordic contributions to EPICA Dronning Maud Land (DLM) site survey (Extended abstract) [1995, eng] F-56087
Radiocarbon-dated subfossil stomach oil deposits from petrel nesting sites [1995, eng] E-55165
Snow studies at Maudheim [1958, eng] F-55616
Snow studies inland [1958, eng] F-55617
Supercooling from orthopyrozene plagioclase relations in Queen Maud Land [1995, eng] E-54165
Surface ice flow and anisotropic internal radar echoes in Queen Maud Land ice sheet [1995, eng] F-54246
Turbulent exchange in the surface layer over antarctic snow and ice [1996, eng] I-55830

Rabot Point
Geological investigations at Rabot Point [1993, eng] E-54534
Preliminary report on the outcrops on western Rabot Point [1993, spa] E-54543
Upper Cretaceous trace fossils from the storm-dominated Rabot Formation on James Ross I. [1993, spa] E-54520

Rakusa Point
Ultrastucture of the alga *Lobococcus irregularis* (Boye-Pet.) Reisigl from King George I. [1995, eng] B-54171

Rauer Islands
Foraging ecology and reproductive energetics of petrels [1994, eng] B-54292

Robert Island
Lichens on Livingston and Robert Is. [1995, eng] B-54662

Roberts Knoll
Antarctic and subantarctic oribatid mites [1996, eng] B-55190
Bacterial production in antarctic soils [1996, eng] B-54605
Climatic data from Roberts Knoll, Jan. 1993-Jan. 1995 [1994, eng] I-54180

Roberts, Cape
High resolution aeromagnetic survey at Cape Roberts [1995, eng] L-54938
Polar news/Notizie polari, Vol.11, No.5 [1996, ita] A-55391

Robertson Island
Rapid collapse of northern Larsen Ice Shelf, Antarctica [1996, eng] F-54240

Roget, Cape
Natural history of emperor penguin colonies of the Ross Sea, 1993 [1994, eng] B-54294

Ronne Entrance
State of Weddell Sea echinoderms [1996, ger] B-54680

Ronne Ice Shelf
2000 record of the Filchner-Ronne Ice Shelf chemistry [1995, eng] F-56075
Airborne radio echo investigations of a marine ice body [1995, eng] F-56065
Airborne radio echo sounding during the Filchner V field season [1995, eng] F-56068
Approximation of ice sheet from ERS-1 radar altimeter in the Filchner Ronne Ice Shelf [1995, eng] F-56069
ARC: a source of multisensor satellite data for polar science [1992, eng] C-56028
Basal melting at grounding line of Rufford Ice Stream from seismic surveys [1995, eng] F-56084
Deployment of oceanographic-glaciological strings under the Filchner-Ronne-Schelfeis in 1995 [1995, eng] F-56078
Experimental fracture and mechanics of antarctic ice [1995, eng] F-56082
Filchner-Ronne Ice Shelf Programme (FRISP), Report No.9 (1995) [1995, eng] F-56063
Geoid determination in the Filchner Ronne Ice Shelf [1995, eng] F-56085
Glaciological investigations on the Foundation Ice Stream [1995, eng] F-56073
Ice-ocean interactions in front of Filchner-Ronne Ice Shelf [1995, eng] F-56064
Interaction between ice-shelf cavities and the open ocean [1995, eng] F-56067
Landsat and ERS-1 SAR image data analysis of the Filchner-Ronne Ice Shelf [1995, eng] F-56071
Review of the airborne radio echo sounding data of the Filchner-Ronne Ice Shelf [1995, eng] F-56083
Spot depth seismics over the southern and western Ronne Ice Shelf [1995, eng] F-56070
Submarine topographical chart around Filchner-Ronne Ice Shelf [1995, eng] F-55205
Temperature variability beneath Ronne Ice Shelf, Antarctica, from thermistor cables [1996, eng] J-54348
Thermistor cable record analysis under the Ronne Ice Shelf [1995, eng] J-56077

Ross Ice Shelf
Alone: the classic polar adventure [1995, eng] A-54350
Evolving front of the Ross Ice Shelf [1994, eng] F-54272
Ice: the antarctic diary of Charles F. Passel [1995, eng] D-54724
June 2, 1993 storm at McMurdo Station [1994, eng] I-54846
Mesoscale cyclonic activity near McMurdo Station [1994, eng] I-54852
Movement of fuel spills in the Ross Ice Shelf [1994, eng] G-55148
Protein turnover in antarctic trekkers [1996, eng] H-56301
Snow accumulation and transport dynamics on the Ross Ice Shelf [1994, eng] F-54147
Warming trend at Little America Station [1961, eng] I-55930
Water soluble substances in terrestrial antarctic plants and microbes [1989, eng] B-55649

Ross Island
Antarctic automatic weather stations: Austral summer 1993-1994 [1994, eng] G-54844
Antarctic EDM operations [1988, eng] C-55645
Atmospheric boundary layer dynamics near Ross Island and over West Antarctica [1995, eng] I-56337
Diving behavior of female Weddell seals [1994, eng] B-55407
Feeding physiology of some antarctic fishes [1996, eng] B-55926
Incubation timer for seabirds: progesterone and its relationship to hatching in Adélie penguins [1995, eng] B-54675
Isotope ratios of O and C in brachiopods [1995, eng] B-55213
Mate switching and copulation behaviour in the Adélie penguin [1995, eng] B-55378
Metabolites from an antarctic sponge-associated bacterium, *Pseudomonas aeruginosa* [1996, eng] B-55158
Monthly mean winds in the mesosphere at 44S and 78S [1989, eng] I-55619
Myoglobin saturation in free-diving Weddell seals [1995, eng] B-54260
Photo-control surveying with satellites [1988, eng] C-55650
Ross Island area wind field [1989, eng] I-55901
Sledging into history [1981, eng] A-55026
Splenic contraction during seal diving [1996, eng] B-54954
Stilbene derivative from an antarctic sponge [1995, eng] B-55225
Studies of an antarctic sponge [1995, eng] B-54610
Trace elements and genesis of Cenozoic rocks from Ross I. and the Taylor Valley [1995, chi] E-54593

Ross Sea
Accumulation rates for Ross Sea biogenic sediments [1996, eng] J-56127
Advection of suspended sediment in the Ross Sea [1994, eng] J-54156
Biogenic implications of Ross Sea particle transport [1996, eng] J-56125

Biomass patterns in the Ross Sea, Antarctica [1996, eng] B-56123
Chronology of late Wisconsin ice retreat from the western Ross Sea, Antarctica [1996, eng] E-54673
Cruise NBP95-01 in the Ross Sea [1995, eng] E-54948
Crustal profile seismic project, Ross Sea [1994, eng] L-54077
Diving behavior of female Weddell seals [1994, eng] B-55407
Epoxyfocardin and its biogenic precursors in the ciliate *Euplotes focardii* [1996, eng] B-55482
Estimates of Ross Sea sedimentary fluxes [1996, eng] J-56128
Euphausiid larvae in the Pacific sector of the Antarctic, 1992 [1995, eng] B-56193
Evidence for a fluidized till deposit on the Ross Sea continental shelf [1994, eng] E-54277
Factors influencing the distribution of diatoms and other algae in the Ross Sea [1996, eng] B-56126
Geological outline of the Ross Sea [1994, ita] E-54341
Ice-core analysis for sea-ice development in Ross, Amundsen and Bellingshausen seas, 1993 and 1994 winters [1995, eng] F-55635
Interaction between arctic and antarctic sea ice [1995, eng] F-54483
Long-range sea ice forecasting at the National Ice Center [1995, eng] F-56218
Long-term ice-sheet stability study in Ross Sea cores [1994, eng] F-54102
Marine deposit evidence of Pliocene antarctic beech tree presence [1996, eng] E-55679
Mesoscale atmospheric circulations over the southwestern Ross Sea sector, Antarctica [1996, eng] 1-56140
Organic compounds in antarctic sea-water and pack-ice [1995, eng] J-55891
Penguin dispersal after fledging [1996, eng] B-56270
Phytoplankton biomass distribution in Ross Sea, Antarctica [1996, eng] B-56124
Phytoplankton biomass in the western Ross Sea: January and February 1994 [1994, eng] B-54279
Radiocarbon date list VIII: Canada, Greenland, Iceland, and Antarctica [1996, eng] E-55433
Reproduction in three species of fish from the Ross Sea and Mawson Sea [1996, eng] B-55318
Ross Sea paleoclimate cruise 1995: marine geology activity report [1995, eng] E-54949
Science in Antarctica [1982, eng] A-55648
Sea ice and snow thickness in antarctic seas, winter 1993-94 [1995, eng] F-55636
Sedimentological data on cores from the Joides Basin [1995, eng] E-54947
Seismic survey of the Ross Sea continental shelf [1994, eng] E-54276
Seismic surveys of Ross Sea for links between eustatic changes and sequence architecture of continental margins [1994, eng] E-54275
Semiannual cycle and sea ice extent in the southern ocean [1995, eng] F-56227
Snow cover on winter sea ice of Amundsen and Ross seas [1995, eng] F-55637
Spatial and temporal variability in southern ocean sea ice coverage [1993, eng] F-55227
Speculative stratigraphic model for the central Ross embayment [1994, eng] E-54074
Temporal changes in shelf water of the southern Ross Sea [1994, eng] J-54271
Trace elements and metal and organic compounds in the Ross Sea [1994, ita] J-54344
Water masses of the Ross Sea and dispersal of suspended matter [1994, ita] J-54342
Winter investigations in the Ross, Amundsen and Bellingshausen seas, 1993-1995 [1995, spa] F-54257

Rothera Station
Weather forecasting for antarctic air and sea operations [1995, eng] 1-55285

Rutford Ice Stream
Basal melting at grounding line of Rufford Ice Stream from seismic surveys [1995, eng] F-56084
Ice shelf basal melting at the grounding line, measured from seismic observations [1996, eng] F-56048

Ryùgù, Cape
Eudorylaimus Andrássy, 1959, n.sp. from East Antarctica [1996, eng] B-54726

San Martin Station
Hydroponic cultivation, a feasible activity for development in Antarctica [1993, spa] B-54508

San Telmo Island
Review of studies at SSSI No.32 and CEMP Site "Cape Shirreff and San Telmo Island" [1995, spa] B-54987

SANAE Station
Auroral research [1995, eng] K-55041
Biological survey of Vesleskarvet Cliff, Ahlmann Ridge [1994, eng] B-54176
Radar studies of magnetosphere dynamics [1995, eng] K-55039
Riometer absorption events at SANAE, L=4.0 [1995, eng] K-55038
VLF waves in the magnetosphere [1995, eng] K-55040
Wave-particle interactions [1996, eng] K-55689

Schopf, Mount
Paleomagnetic rocks of the Transantarctic Mountains [1988, eng] L-55211

Scotia Bay
Phosphorus contents in sediments of Scotia Bay [1993, spa] E-54516

Scotia Sea
Algae populating drifting sea ice in Antarctica [1989, pol] B-54370
Antarctic krill fishery (*Euphausia superba* Dana) and problems of the rational exploitation of its resources [1993, rus] A-54964
Broad band seismology at Esperanza Station [1995, eng] L-56134
Broadband seismology in the Scotia Arc [1995, eng] L-54951
Cephalopods and mesoscale oceanography at the Antarctic Polar Front [1996, eng] B-56184
Chromosomal compliment of the Artedidraconidae from the Scotia Sea [1996, eng] B-56056
Crustal transitions in the Bransfield Trough and the South Scotia Ridge [1995, eng] E-54691
Dispersal of benthic invertebrates in the Scotia Arc by kelp rafting [1994, eng] B-54280
Dissolved oxygen saturation in waters studied during the "Antártida 86 11" expedition [1990, spa] J-55234
Distribution and adaptive brachial crown allometry in cephalopods from the Scotia Sea [1995, eng] B-55772
Filtration and ingestion rates of krill *in vitro* and *in situ* [1995, eng] B-54567
Foraminifera, biofacies and sedimentary hydrodynamics in Antarctica [1990, spa] E-55247
Heat fluxes across the ACC in the Drake Passage and Scotia Sea [1996, eng] J-56282
Hydrocarbons in the antarctic marine environment: monitoring and background [1994, eng] J-54388
Ice-edge hydrography between Elephant I. and the South Orkneys, summer 1988-1989 [1990, spa] J-55232
Karyotype diversity in three fish species of the family *Bathydraconidae* from western Antarctic [1990, rus] B-56310
Middle Eocene dinocysts from Bruce Bank, Scotia Sea [1995, eng] E-54188
New ecological role for cephalopods at the APFZ [1995, eng] B-54054
Notaspidean *Polictenidia tomasi* n.gen and n.sp. from the Scotia Sea [1996, eng] B-54463
Photochemistry of antarctic waters during the 1993 austral spring [1994, eng] J-54154
Phytoplankton pigment profiles, Weddell-Scotia Confluence, spring 1993 [1994, eng] B-54281
Phytoplankton responses to ultraviolet irradiance in the Weddell-Scotia Confluence in spring [1994, eng] B-54839
Southern ocean frontal zones as the main locations of myctophidae and krill concentrations [1993, rus] J-54962
Structure and Cenozoic tectonic evolution of the South Scotia Ridge [1995, eng] E-54942
Study of some oceanographic parameters from the "Antártida 8611" expedition [1988, spa] J-56254
Tintinnid ecology and associated microzooplankton in the Weddell-Scotia confluence [1993, spa] B-54504
Two new species of antarctic pycnogonida [1990, spa] B-55238
Ultraviolet absorbance by diatom populations from the Weddell-Scotia Confluence [1994, eng] B-54838
Ultraviolet and visible solar irradiance at the Weddell-Scotia Confluence, spring 1993 [1994, eng] 1-54840

Scott Base
Antarctica New Zealand 1996-97 handbook [1996, eng] A-55976
Ground-based observations of the ozone hole in Antarctica [1995, eng] 1-54775
Ionisation below 55 km in the antarctic mesosphere [1992, eng] K-54219
Monthly mean winds in the mesosphere at 44S and 78S [1989, eng] 1-55619
Multistation study of long period geomagnetic pulsations in the polar cleft and cusp [1992, eng] K-54207
New Zealand's future in Antarctica [1996, eng] A-55424
Report 1995/1996 [1996, eng] A-55421
Topographic effects on Scott Base low level winds [1988, eng] 1-55210

Scott Coast
Late Wisconsin/Holocene history of the Wilson Piedmont Glacier [1994, eng] E-54079

Seal Islands
Effects of TDRs on seal behavior [1995, eng] B-54481

Seymour Island
Eocene brachiopods from La Meseta Formation of Seymour I. [1996, eng] E-55908
Eocene crinoids from La Meseta Formation of Seymour I. [1996, eng] E-55909
Eocene echinoid from La Meseta Formation of Seymour I. [1996, eng] E-55910
Eocene plant and fish assemblages from La Meseta Formation, Seymour I. [1996, eng] E-55911
Geochemistry of vulcanites from Seymour and Snow Hill islands [1993, spa] E-54529
Geological-paleontological studies of Seymour Island (West Antarctica) [1989,

pol] **E-54361**
Geology of Seymour I. from Spot images [1990, por] **E-55946**
Geology of Upper Cretaceous samples from Seymour I. [1993, spa] **E-54519**
Grapnelispora evansii, Late Cretaceous megaspore from Argentina and Antarctica [1988, spa] **E-56305**
Paleoecology of the basal section of La Meseta Formation, Seymour I. [1993, spa] **E-54522**
Paleogene corals from Seymour Island, Antarctic Peninsula [1996, eng] **E-55907**
Science news from The Ice: highlights from the 1994-1995 austral summer [1995, eng] **A-55631**
Secondary precipitates in Pleistocene and present cryogenic environments [1996, eng] **E-54654**
Tectonics and initial sedimentation of La Meseta Formation on Seymour I. [1993, spa] **E-54542**

Shackleton Range
Geology and regional metamorphism of the northeastern Shackleton Range [1995, eng] **E-54931**
Geology of the Shackleton Range and Coats Land nunataks [1994, eng] **E-54072**
Mapping and petrology of the Proterozoic Read Metamorphic Complex in the Shackleton Range [1995, eng] **E-54932**

Shag Rocks
Distribution, abundance and biology of *Patagonotothen brevicauda guntheri* from the Shag Rocks [1990, spa] **B-55237**
Population differentiation by size for mackerel icefish at Shag Rocks and South Georgia [1996, eng] **B-54552**

Sheehan Mesa
Magnetovariational stations in the Lanterman Range and Sheehan Mesa [1995, eng] **L-54937**

Shirase Glacier
Numerical simulation of Shirase Glacier [1995, eng] **F-54247**

Shirreff, Cape
Baseline for monitoring of marine debris at Cape Shirreff [1995, spa] **B-54986**
Behavior of antarctic fur seal bulls at Cape Shirreff during the mating season [1995, spa] **B-54984**
Bioanthropological analysis of a human skull from Cape Shirreff [1995, spa] **B-54983**
Review of studies at SSSI No.32 and CEMP Site "Cape Shirreff and San Telmo Island" [1995, spa] **B-54987**

Showa Station
Activities for a long duration flight system in Japan [1996, eng] **K-55842**
Activities of JARE-36, summer 1994-1995 [1995, jpn] **D-54998**
Aircraft operation for earth science study in the Yamato Mountains by JARE 35 [1995, jpn] **G-54495**
Antarctic atmospheric moisture values obtained from microwave radiometers [1992, eng] **I-54547**
Autumnal sea ice biota in polar seas [1996, eng] **B-55447**
Biogeochemistry of lake sediments near Showa Station [1993, eng] **E-54992**
Characterization of antarctic aerosol particles using laser microbe mass spectrometry [1996, eng] **I-55330**
Comparative study of auroral modulation and ground Pi2 oscillations (Extended abstract) [1996, eng] **K-55377**
Convection enhancement event observed with the Polar Patrol Balloon #4 [1996, eng] **K-55372**
Data-logging automatic weather station along the traverse route from Syowa Station to Dome Fuji [1995, eng] **I-54245**
Doppler spectroscopy of antarctic wind velocities [1995, eng] **I-54671**
Earthquakes recorded at Showa Station, 1987-1993 [1995, eng] **L-54046**
Ecology of the moss vegetation at Showa Station [1987, eng] **B-56203**
Effective emissivity of clouds from radiometersonde measurements at Syowa Station, Antarctica [1995, eng] **I-54250**
Geomagnetic pulsation anomaly at Showa Station [1996, jpn] **K-55586**
HF field strengts at Showa Station in 1994 [1996, eng] **K-55369**
Ice flow observations along traverse routes from the coast to Dome Fuji [1995, eng] **F-54044**
Installation of HF radar at Syowa Station—a personal retrospect of the project [1995, jpn] **G-54497**
Ionospheric data at Syowa Station (Antarctica). Ion.Ant-44 January 1985-June 1985 [1989, eng] **K-55990**
Japanese antarctic activities for 1995-1996 [1996, eng] **A-54266**
Lichen habitats near Showa Station [1995, eng] **B-54659**
Life cycle of *Paralabidocera antarctica* at Showa Station [1996, eng] **B-55596**
Measuring snow particle size from video radar images [1995, eng] **F-54248**
Meteorological data at Showa Station, 1994 [1995, eng] **I-54269**
Meteorological observations at Showa Station by JARE-33 in 1992 [1995, jpn] **I-54999**
Ozone and temperature trends [1991, eng] **I-54310**
Phytoplankton pigments during JARE-30, Nov. 1988-Mar. 1989 [1996, eng] **B-56105**
Phytoplankton pigments during JARE-31, Nov. 1989-Mar. 1990 [1996, eng] **B-56106**
Phytoplankton pigments during JARE-32, Nov. 1990-Mar. 1991 [1996, eng] **B-56107**
Phytoplankton pigments during JARE-33, Nov. 1991-Mar. 1992 [1996, eng] **B-56108**
Phytoplankton pigments during JARE-34, Nov. 1992-Mar. 1993 [1996, eng] **B-56109**
Phytoplankton pigments during JARE-35, Nov. 1993-Mar. 1994 [1996, eng] **B-56110**
Polar cusp, plasma mantle particles and their relationships to polar rain [1996, eng] **K-55373**
Possible influence of long-term SST-anomalies on the eddy ozone transport [1989, eng] **I-55849**
Proceedings of the NIPR Symposium on Polar Meteorology and Glaciology, No.9 [1995, eng] **F-54242**
Proceedings of the NIPR Symposium on Upper Atmosphere Physics, No.9 [1996, eng] **K-55371**
Radiation at Showa and South Pole Stations [1995, eng] **I-55414**

Colonisation and development in encrusting communities from the Antarctic intertidal and sublittoral [1996, eng] **B-56053**
Competition in encrusting antarctic bryozoan assemblages [1996, eng] **B-56054**
Construction of a diatom-based chlorophyll *a* transfer function and its application at three lakes on Signy I. [1995, eng] **B-54829**
Freshwater tardigrades from Signy I. [1995, eng] **B-54055**
Ice nucleation activity in antarctic plants [1996, eng] **B-55539**
Karyotypes of the species *Harpagifer* from the South Orkneys and Macquarie I. [1996, eng] **B-56055**
Lichens in the maritime Antarctic [1995, eng] **B-54661**
Macroalgae biomass, cover and zonation pattern at Signy I. [1995, eng] **B-54308**
Metabolism and feeding of the brachiopod *Liothyrella uva* [1996, eng] **B-54862**
New lichenized species from Signy Island [1996, eng] **B-54902**
Penguin population dynamics in relation to sea ice distribution [1996, eng] **B-55333**
Photosynthesis and annual production of red macroalgae, and underwater irradiance, at Signy I. [1996, eng] **B-55594**
Reproduction of antarctic flowering plants [1996, eng] **B-55312**
Response of pioneer soil microalgal colonists to environmental change in Antarctica [1996, eng] **B-55010**
Signy Island freshwater diatom [1995, eng] **B-55403**
Signy Island, Antarctica nudibranch diet and distribution [1996, eng] **B-56017**
Soil algae image analysis for detection of environmental change [1994, eng] **B-54382**
Sublittoral epifaunal communities at Signy Island, Antarctica. I. The ice-foot zone [1995, eng] **B-55793**
Sublittoral epifaunal communities at Signy Island, Antarctica. II. Below the ice-foot zone [1995, eng] **B-55794**
Temperature requirements for growth and survival of antarctic Rhodophyta [1996, eng] **B-56258**

Siple Coast
Geophysical experiments on Ridge B1/B2, Siple Coast [1994, eng] **F-54097**

Ice velocities near a relict flow feature on Siple Dome [1994, eng] **F-54100**
Internal layer folding patterns from radar studies of ice streams B and C [1994, eng] **F-54101**
Modeling katabatic winds over West Antarctica [1995, eng] **I-56236**
Observational study of the katabatic wind confluence zone near Siple Coast, West Antarctica [1996, eng] **I-54807**
Observational study of the springtime Siple Coast confluence zone [1995, eng] **I-56237**
Progress in ice-stream basal modeling [1994, eng] **F-54099**
Shear margins in glaciers and ice sheets [1996, eng] **F-55081**
Synoptic-scale cyclones and summer surface winds on Siple Coast [1994, eng] **I-54851**
Temperature measurements in the margin of ice stream B, 1993-1994 [1994, eng] **F-54098**

Siple Station
Intensities and polarization rates of whistler mode VLF signals [1995, eng] **K-54860**
ULF modulation of ELF-VLF emissions close to the magnetospheric boundary [1994, eng] **K-54396**

Snow Hill Island
Geochemistry of vulcanites from Seymour and Snow Hill islands [1993, spa] **E-54529**
Historic archeology in Antarctica [1992, spa] **A-55970**

Snow Island
Significance of Snow Island flora [1995, eng] **E-54814**

Sobral Peninsula
Rapid collapse of northern Larsen Ice Shelf, Antarctica [1996, eng] **F-54240**

Sombre Lake
Microbial dynamics in maritime antarctic lakes in summer [1996, eng] **B-55393**

Sør Rondane Mountains
Evolution of metamorphic and intrusive rocks from the Sør Rondane Mountains [1995, eng] **E-54620**
Geochemistry of mafic dike rocks, Sør Rondane Mountains [1995, eng] **E-54618**
Internal and basal ice changes near the grounding line derived from radio-echo sounding [1996, eng] **F-55082**
Stability field of amphibole from the Sør Rondane Mountains [1995, eng] **E-54621**

Søstrene Islands
Metamorphic age of garnet-pyroxene granulite from the Søstrene Is. [1995, chi] **E-54590**

South Atlantic Ocean
Aerosol measurements during the 33rd Soviet Antarctic Expedition [1990, eng] **I-56321**
Antarctic fishing and its likely development [1993, eng] **A-55533**
Benthic foraminifera off the Antarctic Peninsula [1994, eng] **B-54393**
Bottom pressure correlations in the south Atlantic [1996, eng] **J-56009**
Concept of the cooperative air transport system in East Antarctica [1994, eng] **G-54881**
Deep water distillation [1996, eng] **J-55112**
Deep-sea foraminifera in the South Atlantic Ocean: ecology and assemblage generation [1995, eng] **B-55108**
Description of *Lecithochirium whitei* n.sp. from the fish *Bathylagus antarcticus* [1994, eng] **B-55002**
Distribution of Chaetognatha off Queen Maud Land, Antarctica [1992, eng] **B-54952**
Distribution of mtDNA in humpback whales [1995, eng] **B-55195**
Distribution of surface zooplankton and seabirds across the southern ocean [1996, eng] **B-55189**
Fishes of the Tristan da Cunha group and Gough Island, South Atlantic Ocean [1995, eng] **B-55310**
Lévy flight search patterns of wandering albatrosses [1996, eng] **B-55624**
Ocean thermohaline circulations compared [1996, eng] **J-55113**
Open-ocean phytoplankton blooms north of South Georgia in summer 1994 [1996, eng] **J-56189**
Phytoplankton biomass, productivity and organic carbon in the southern ocean [1996, eng] **B-54683**
Surface mesozooplankton biomass distribution in the South Atlantic Ocean [1996, eng] **B-56279**
Thecosomata (Gastropoda) from the antarctic ocean [1993, spa] **B-54506**
Trace metals and natural radionuclides as tracers of ocean productivity [1994, eng] **J-55060**

South Bay
Petrology of hypabyssal manifestations in South Bay, Livingston I. [1993, spa] **E-54539**

South Georgia
[Remembrance: William Nigel Bonner] [1995, eng] **A-54757**
Acanthocephalan infection of inshore fishes at the South Orkney Islands [1996, eng] **B-55598**
Acari of the supralittoral zone on South Georgia [1994, eng] **B-54389**
Age and growth of *Notothenia gibberifrons* Lönnberg 1905 at South Georgia [1990, spa] **B-55236**
Albatross' fish diet at South Georgia [1996, eng] **B-55959**
Anomalies of hydrometeorological conditions in the South Atlantic Ocean [1986, rus] **J-56324**
Antarctic benthic ostracods 4: from South Georgia [1989, ger] **B-55494**
Antarctic fur seal diet during breeding, South Georgia [1996, eng] **B-54467**
Barnacles on southern elephant seal skin [1995, eng] **B-55013**
Biochemistry of a psychrophilic alga [1996, eng] **B-55651**
Biogeographic observations on South Georgia marine yeasts [1994, eng] **B-54278**
Biomass allocation in *Acaena magellanica* [1996, eng] **B-55314**
Blackfin icefish stock off South Georgia, 1988-1992 [1993, eng] **B-54139**
Body composition changes in elephant seal mothers [1996, eng] **B-55776**
Body composition of antarctic fur seals [1996, eng] **B-54261**
Comparison of geostatistical and random sample survey analyses of antarctic krill acoustic data [1996, eng] **B-55222**
Development of the parasite *Eubrachiella antarctica* [1993, eng] **B-54141**
Diel periodicity of subantarctic copepods [1996, eng] **B-55979**
Differences between krill caught by predators and by net [1996, eng] **B-56187**
Dispersal of benthic invertebrates in the Scotia Arc by kelp rafting [1994, eng] **B-54280**
Distribution and adaptive brachial crown allometry in cephalopods from the Scotia Sea [1995, eng] **B-55772**
Duration of pregnancy in fur seals [1996, eng] **B-54901**
Egg-shell distribution and abundance, and egg-shell morphology, of antarctic fish at South Georgia [1996, eng] **B-55597**
Entanglement of seals at South Georgia [1995, eng] **B-54816**
Environment-krill relations in the South Georgia marine ecosystem [1996, eng] **B-56097**
Epifaunal biomass and abundance by mixed fractal and anisotropy in marine macroalgae from South Georgia [1996, eng] **B-56185**
Evaluation model for yield and long-term status of fish stocks [1996, eng] **B-56098**
Food and growth in fur seal pups [1996, eng] **B-55197**
Freshwater diatom communities of the Strømness Bay area, South Georgia [1996, eng] **B-56281**
Fur seal diet at South Georgia [1996, eng] **B-55315**
Geochemical variations in South Georgia subantarctic lakes [1996, eng] **B-56088**
Histology of ovarian development of *Champsocephalus gunnari* from South Geogia [1995, eng] **B-54428**
Incidental mortality of seabirds in the Patagonian toothfish fishery around South Georgia in 1995 [1996, eng] **A-56100**
Industrial archaeology at South Georgia: methods and results [1996, eng] **G-54320**
Interaction between wandering albatrosses and longline fisheries at South Georgia [1996, eng] **A-56102**
Island at the edge of the world: a South Georgia odyssey [1991, eng] **A-55027**
King Penguin breeding cycle [1996, eng] **B-55401**
Leslie depletion model for abundance assessment of the Patagonian toothfish [1996, eng] **B-56099**
Lévy flight search patterns of wandering albatrosses [1996, eng] **B-55624**
Lipid storage patterns of two species of copepod [1996, eng] **B-55981**
Movements of southern elephant seals [1996, eng] **B-56248**
Natural mortality of a mackerel icefish around South Georgia [1995, eng] **B-54893**
New antarctic coelenterate species [1996, eng] **B-55802**
Observations on the avifauna of South Georgia [1993, spa] **B-54509**
Occurrence of a copepod parasite on the fish *Champsocephalus gunnari* [1993, eng] **B-54142**
Offspring sex ratio and female size in southern elephant seals [1994, eng] **B-54391**
Oribatid mites of South Georgia [1995, eng] **B-54057**
Oswaldella shetlandica Stepan'yants, 1979 and *O. elongata* n.sp. (Cnidaria:Hydrozoa) [1995, eng] **B-55936**
Performance of the FP-120 trawl in fish stock assessment surveys around South Georgia [1995, eng] **A-54429**
Population differentiation by size for mackerel icefish at Shag Rocks and South Georgia [1996, eng] **B-54552**
Precutionary measures for the krill fishery [1996, eng] **B-56096**
Reproduction of antarctic flowering plants [1996, eng] **B-55312**
Seabird interaction with longlining operations for fish around South Georgia, 1994 [1995, eng] **B-54433**
Seasonal amphipod trophodynamics in the South Georgia region [1996, eng] **B-55282**
South Georgia Islands acoustic targets during seasonal krill scarcity [1996, eng] **B-55795**
Spatial and behavioral responses by foraging seabirds to antarctic krill swarms [1994, eng] **B-54290**
Speed and time during seals' foraging dives [1995, eng] **B-55098**
Status of southern elephant seals at South Georgia [1996, eng] **B-55593**
Structure of borel from the South Georgia and South Shetlands region [1989, pol] **B-54371**
Studies of age marking in *Parachaenichthys georgianus* (Pisces, Bathydra-

conidae) from the South Georgia region [1989, pol] B-54372
Study of four South Georgia molluscs [1995, eng] B-54817
Subantarctic copepods in a low chlorophyll marine environment [1996, eng] B-54648
Trachythyone baja n.sp. from Antarctica [1987, eng] B-55486
Two dominant antarctic copepod distribution and population dynamics in different water masses during summer [1996, eng] B-56188
Ubiquitous marine Arthropod from Martha Coast [1994, ger] B-55106
Vitamin D in southern elephant seals [1996, eng] B-55442

South Orkney Islands
Acanthocephalan infection of inshore fishes at the South Orkney Islands [1996, eng] B-55598
Algae populating drifting sea ice in Antarctica [1989, pol] B-54370
Antarctic benthic ostracods 3: from South Orkney Is. [1988, ger] B-55490
Biological particles over Antarctica [1996, eng] I-56272
Biomass stimulating biogeochemical experiment [1996, eng] B-55897
Bruce and the SNAE [1992, eng] A-54404
Ecosystem of the sea ice in Antarctica [1989, pol] F-54357
Freshwater tardigrades from Signy I. [1995, eng] B-54055
Lichens in the maritime Antarctic [1995, eng] B-54661
Log of the *Scotia* Expedition, 1902-4 [1992, eng] D-54588
New antarctic coelenterate species [1996, eng] B-55802
New lichenized species from Signy Island [1996, eng] B-54902
Percentage of gravid female krill found during the "Antártida 86 11" expedition [1990, spa] A-55240
Signy Island freshwater diatom [1995, eng] B-55403
SNAE's survey of Laurie Island [1990, eng] C-54405
Sublittoral epifaunal communities at Signy Island, Antarctica. I. The ice-foot zone [1995, eng] B-55793
Sublittoral epifaunal communities at Signy Island, Antarctica. II. Below the ice-foot zone [1995, eng] B-55794

South Pacific Ocean
Benthic foraminifera off the Antarctic Peninsula [1994, eng] B-54393
Case analysis of antarctic strong cyclone process [1989, chi] I-55713
CO_2 pressure in the Pacific Ocean surface waters in summers of 1992 and 1994 [1994, eng] J-54159
Correction to paper by H. Houston [1990, eng] L-55030
Distribution of surface zooplankton and seabirds across the southern ocean [1996, eng] B-55189
Floristic zonation of the southern ocean [1993,] B-56034
Geomagnetic field and tectonics of the southeast Pacific [1989, chi] E-55755
Heat transport by large-scale antarctic geostrophic currents [1996, eng] J-56039
Sea-air exchange of sulfur, phosphorus, and nitrogen in marine aerosols over the Antarctic Peninsula waters [1989, chi] I-55724
Sources and distribution of sulfate in the Pacific atmosphere [1989, chi] I-55760

South Pole
Global operational monitoring of atmospheric ozone from space [1992, eng] I-56132

South Sandwich Islands
Anomalies of hydrometeorological conditions in the South Atlantic Ocean [1986, rus] J-56324
Biomass stimulating biogeochemical experiment [1996, eng] B-55897
New antarctic coelenterate species [1996, eng] B-55802
Seismic Love surface waves and lithosphere of the Antarctic Peninsula [1996, chi] L-55878

South Shetland Islands
Acanthocephalan infection of inshore fishes at the South Orkney Islands [1996, eng] B-55598
Algae populating drifting sea ice in Antarctica [1989, pol] B-54370
Amphipod fauna of the South Shetlands and Bransfield Strait [1995, eng] B-56190
Antarctic krill (*Euphausia superba* Dana) eat salps [1996, eng] B-55960
Antarctic krill in waters northwest of the Antarctic Peninsula [1989, chi] B-55727
Arctowski Antarctic Station (AAS), 1988-1991 [1993, eng] L-54969
Biomass stimulating biogeochemical experiment [1996, eng] B-55897
Carboxylic acids and fatty alcohols in marine sediments around the South Shetland Is. [1989, chi] E-55721
Cellariiform and flustriform microporellid Bryozoa from Antarctica [1989, spa] B-54195
Cetaceans, seals and seabirds observed near the Antarctic Peninsula [1990, spa] B-55246
Chaetognatha in waters northwest of the Antarctic Peninsula [1989, chi] B-55737
Clastic sediment features in the sea area adjacent to the South Shetland Islands [1989, chi] E-55751
Competition between the krill fishery and penguins in the South Shetland Islands [1996, eng] B-54689
Copepoda from the water area northwest of the Antarctic Peninsula [1989, chi] B-55734
Geodesic expeditions to the South Shetland Is., 1987-1989 [1990, spa] C-55255
Geology of the Bransfield Basins [1996, eng] J-55674
Geology of the eastern coast of Discovery Bay, Greenwich Island and the South Shetlands [1989, pol] E-54362
Geomorphology of the shelf of the South Shetland Islands within the limits of Bransfield Strait [1989, pol] E-54363
Geophysical investigations in Bransfield Strait and the South Shetland Is. [1993, spa] E-54513
GPS observations in 1988-89: austral gravity effects on satellite observations [1990, spa] C-55256
Human impact on terrestrial ecosystems in West Antarctica [1996, eng] B-55464
Krill larvae in waters northwest of the Antarctic Peninsula [1989, chi] B-55726
Land of ice and fire [1995, eng] A-55104
Lichen flora and vegetation of the South Shetland Is. [1993, pol] B-55512
Lichens on Livingston and Robert Is. [1995, eng] B-54662
Marine clay deposits in ice water around the South Shetlands [1989, chi] E-55748
Marine glacial deposition around the South Shetland Islands [1989, chi] E-55752
Mean annual air temperature trends since 1904 in the South Shetland Islands [1995, chi] I-55307
Metabolism of breeding chinstrap penguins [1996, eng] B-55103
Model of penguin foraging demands and krill fishery overlap near the South Shetland Is. [1995, eng] B-54432
New record of Cattle Egret, Blacknecked Swan, and Whiterumped Sandpiper from the South Shetland Is. [1995, eng] B-54477
Ocean food web at King George Island [1996, ger] B-55818
Oceanographic study from satellite drifting buoy and hydrographic data [1993, por] J-55943
Oxygen-minimum layer in waters around the South Shetland Is. and Ardley I. in summer [1989, chi] J-55722
Paleoclimate from diatom distribution in a marine core [1989, chi] E-55747
Paleomagnetism of a sedimentary marine core off the Antarctic Peninsula [1989, chi] E-55756
Paleomagnetism of Early Tertiary volcanic rocks from South Shetland Is. [1995, chi] E-54592
Percentage of gravid female krill found during the "Antártida 86 11" expedition [1990, spa] A-55240
Photosynthesis in macroalgae of King George Island [1996, ger] B-55035
Phytoplankton community and water masses northwest of the Antarctic Peninsula [1989, chi] B-55732
Phytoplankton, chlorophyll-*a* and krill distribution in waters northwest of the Antarctic Peninsula [1989, chi] B-55731
Pinnipeds and seabirds at South Shetland Is., summer 1993-1994 [1994, eng] B-54702
Polychaetes collected by "Polarstern" antarctic cruise in 1984 [1988, ger] B-55487
Problems in geodynamic studies of Antarctica [1989, pol] E-54356
Radiolaria biostratigraphy of core S_{11} in the area northwest of Antarctic Peninsula [1989, chi] E-55746
Review of Echiura and its geographic distribution [1996, eng] B-55338
Sediment types and sedimentation of the northwestern sea area of the Antarctic Peninsula [1989, chi] E-55753
Seismicity around the Antarctic Peninsula [1995, eng] L-54616
Stable isotopic compositions and REE distributions of sea-floor sediments in high latitudes of the southern ocean [1989, chi] E-55750
Structure of borel from the South Georgia and South Shetlands region [1989, pol] B-54371
Surface water circulation in krill fishing areas near the South Shetland Islands [1996, eng] J-56104
Tectonics and paleomagnetism of Early Tertiary volcanics at South Shetland Is. [1995, eng] E-54566
Twenty-four hour course of wind temperatures at Arctowski Station (King George Island, South Shetlands) [1989, pol] I-54366
Uncommon tetrahydrofuran monoterpenes [1996, eng] B-55412
Water masses and circulation around the South Shetland Islands in summer [1989, chi] J-55706
Wind velocities and frequency of its hourly values at Arctowski Station [1989, pol] I-54365

Stranger Point
Fish diet of the antarctic fur seal at Stranger Point [1996, eng] B-55336
Southern elephant seal *(Mirounga leonina)*. 2 [1996, eng] B-55187

Svarthamaren Mountain
Food provisioning in the petrel *Thalassoica antarctica* [1996, eng] B-55357

Table Mountain
Minimum Pliocene exposure ages for antarctic plateau sediments [1995, eng] E-54058

Taylor Dome
Climate change during the last deglaciation in Antarctica [1996, eng] F-55095
Climatic implications of solar modulation of cosmogenic isotopes in antarctic ice cores [1996, eng] K-54502
Glacier geophysics at Taylor Dome: year 4 [1994, eng] F-54108

Stratigraphy and physics of the Taylor Dome ice core [1994, eng] F-54109
Taylor Ice Dome study 1993-1994: an ice core to bedrock [1994, eng] F-54107
U.S. antarctic activities, 1993-1994 [1994, eng] A-54069

Taylor Glacier
Food and energy intake rates of emperor penguins rearing chicks [1996, eng] B-54553
Glacial geology, McMurdo Sound [1960, eng] E-55883

Taylor Valley
Bibliography of international Dry Valley publications, Vol.3, 1985-1994 [1995, eng] A-54793
Depth distribution of soil nematodes in Taylor Valley, Antarctica [1994, eng] B-54692
Glacial geology, McMurdo Sound [1960, eng] E-55883
Hydrology of Huey Creek, Taylor Valley [1993, eng] E-54990
McMurdo LTER: Developing a geographic information system access system [1994, eng] C-54722
McMurdo LTER: Developing a geographic information system database [1994, eng] C-54721
McMurdo LTER: Streamflow measurements in Taylor Valley [1994, eng] E-54715
Soil and nematode distribution in Taylor Valley [1994, eng] E-54714
Trace elements and genesis of Cenozoic rocks from Ross I. and the Taylor Valley [1995, chi] E-54593

Terra Nova Bay
Age and growth of *Trematomus bernacchii* from Terra Nova Bay [1996, eng] B-54469
Astronomical seeing estimation in Antarctica [1996, eng] K-55765
Benthos studies in Terra Nova Bay, 1987-1992 [1995, eng] B-54773
Buoy installation and operation in Terra Nova Bay [1994, eng] G-54886
High cadmium content in organisms from Terra Nova Bay [1996, eng] B-55964
Infralittoral Bryozoa associated to macroalgae from Terra Nova Bay [1991, eng] B-54196
Moraines and buried ice in Terra Nova Bay area [1994, ita] E-54340
New radiochemical procedures for environmental actinide measurements and data quality control [1995, eng] A-54172
One n.gen. and 2 n.sp. of Tubificidae (Oligochaeta) from the Ross Sea [1996, eng] B-55962
Optical fibres in an antarctic sponge [1996, eng] B-56271
Organic compounds in antarctic sea-water and pack-ice [1995, eng] J-55891
Particulate organic matter in Terra Nova Bay in summer 1990 [1996, eng] J-54549
Prototype of a moored meteorological/oceanographic buoy for Terra Nova Bay [1994, eng] J-55118
Seismic observatory in Terra Nova [1995, eng] L-54950
Six new species of *Grania* from the Ross Sea [1996, eng] B-55317
Summer marine algae biomass from Ross Sea, Antarctica [1996, eng] B-55811
Tetraphyllidean cercoids from bony fishes occurring in the Ross Sea (Antarctic) [1994, eng] B-55003
Tintinnids from Terra Nova Bay, summers of 1987-88 and 1989-90 [1995, eng] B-54110

Terra Nova Bay Station
Automatic integrated module installed at Terra Nova Bay [1994, eng] G-54883
High-speed network for communication by voice, data video and fax among three antarctic bases [1994, eng] G-54884
Il Polo, Dec. 1995, Vol.4 [1995, ita] A-55009
Italian report to SCAR, June 1995 [1995, eng] A-54750
National Antarctic Research Program [1994, ita] A-54335

Thiel Mountains
Ice sheet surface features between 80 and 90S, along 90W [1995, eng] F-54918
Petrology and classification of new antarctic carbonaceous chondrites PCA91082, TIL91722 and WIS91600 [1996, eng] E-55664
Weathering of granite-porphyry in the Thiel Mountains [1995, eng] E-54915

Three Sisters Point
Glacier retreat and raised beaches at Three Sisters Point [1995, eng] E-54752

Thule Island
Birds of Thule I., South Sandwich Is. [1981, fre] B-54397

Tierra del Fuego
Biological particles over Antarctica [1996, eng] 1-56272
Cruise report of the 1994 *Victor Hensen* cruise [1996, eng] J-54900
New antarctic coelenterate species [1996, eng] B-55802
Palaeoecology of a cushion bog, southern Tierra del Fuego [1995, eng] E-54302

Torgersen Island
Ration and body sizes effect on dynamic action in Adélie penguin chicks [1995, eng] B-54113

Transantarctic Mountains
Constraints on age, erosion, and uplift of Neogene glacial deposits in the Transantarctic Mountains determined from in situ cosmogenic ^{10}Be and ^{26}Al [1995, eng] E-54234
Early Cambrian trilobites from the Shackleton Limestone [1995, eng] E-54253
Enigmatic gymnosperms? Structurally preserved Permian and Triassic seed ferns from Antarctica [1996, eng] E-54760
Geodynamic links between the Transantarctic Mountains and Tethys [1994, eng] E-54088
Jurassic faulting and magmatism in the Transantarctic Mountains [1993, eng] E-55569
Late Cenozoic tectonics and the dynamics of the west antarctic ice sheet [1994, eng] E-54073
Mesozoic volcanism in the central Transantarctic Mountains [1993, eng] E-55559
New stratigraphical unit in the Transantarctic Mountains [1996, eng] E-56284
Paleomagnetic rocks of the Transantarctic Mountains [1988, eng] L-55211
Plate motions, SW Pacific/Antarctica [1995, eng] E-55675
Pleistocene glacier thicknesses inferred from electron microscopy of till microtextures [1995, eng] E-54456
Science in Antarctica [1982, eng] A-55648
Thermal evolution within the Ross Orogen, Antarctica [1996, eng] E-55352
Transantarctic Mountains fossil climatic implications [1996, eng] E-56015
Uplift of the Transantarctic Mountains [1988, eng] E-55646
Uplift of Transantarctic Mountains in northern Victoria Land [1994, eng] L-55058

Tristan da Cunha
Bottom pressure correlations in the south Atlantic [1996, eng] J-56009
Fishes of the Tristan da Cunha group and Gough Island, South Atlantic Ocean [1995, eng] B-55310

Turret Point
Biologic notes about Turret Point, King George Island, Antarctica [1990, eng] B-55346

Two Step Cliffs
Soil algae image analysis for detection of environmental change [1994, eng] B-54382

Ullmann Point
New occurrence of *Usnea* in Antarctica [1990, eng] B-55344

Vahsel Bay
State of Weddell Sea echinoderms [1996, ger] B-54680

Vanda, Lake
Growth of a bacterium suspended in Lake Vanda [1995, eng] B-54262
Phytoplankton nutrient deficiency in Taylor Valley lakes [1994, eng] B-54719
Polar news/Notizie polari, Vol.11, No.2 [1996, ita] A-55016
Water, ice & stone [1995, eng] E-54052

Vapour Col
Metabolism of breeding chinstrap penguins [1996, eng] B-55103

Vesleskarvet Cliff
Biological survey of Vesleskarvet Cliff, Ahlmann Ridge [1994, eng] B-54176

Vestfold Hills
Copepod adaptability to temperature and salinity in a salt lake [1989, chi] B-55738
Effect of salinity on oxygen metabolism of copepods in a salt lake [1989, chi] B-55739
Evolution of Ace Lake, Antarctica, determined from sedimentary diatom assemblages [1996, eng] E-55921
Human activity and Adélie penguin breeding success [1996, eng] B-54493
Hydrographic and climatic changes and proglacial Druzhby drainage system [1996, eng] E-56283
Microbial plankton in Vestfold Hills lakes [1995, eng] B-54611
New psychrobracters from the Vestfold Hills [1996, eng] B-56267
Pigmented bacteria from an antarctic lake [1991, eng] B-55207
Planktonic biomass variations in an antarctic lake [1996, eng] B-55435
Rates of rock surface lowering, Princess Elizabeth Land, eastern Antarctica [1995, eng] E-54806
Seasonal changes in the respiration of *Drepanopus bispinosus* from Burton Lake [1995, eng] B-54043
Surface sediment diatoms and water chemistry in saline lakes of the Vestfold Hills [1996, eng] E-56278
Surficial salts in the Vestfold Hills [1996, eng] E-54557
Two new psychrotrophic bacteria species [1991, eng] B-55209

Veststraumen Glacier
Microwave emission from density-stratified antarctic firn at 6 cm wavelength [1996, eng] F-55080
Passive microwave remote sensing of snow: volume scattering in antarctic firn [1995, eng] F-54811

Victoria Land
Block moraine formation of antarctic glaciers [1996, eng] E-55543
Climate change during the last deglaciation in Antarctica [1996, eng] F-55095
Crystal structure of gottardiite, a new natural zeolite [1996, eng] E-55692
Disturbances of isotopic systems in the Kirkpatrick Basalt, Victoria Land [1993, eng] E-55560
Field work on Cambro-Ordovician granitoids in the Wilson Terrane [1995, eng] E-54930
Freshwater algae from Lake Gondwana [1995, eng] B-54636

Geochronological studies of granite rocks from Victoria Land [1995, eng] **E-54626**
Geology of the Lanterman Metamorphic Complex, Victoria Land [1994, eng] **E-54082**
Geology of the Wilson-Bowers-Robertson Bay terranes boundaries [1995, eng] **E-54928**
Geomorphological evolution of Victoria Land [1995, eng] **E-54935**
Geomorphology of northern Victoria Land [1994, ita] **E-54343**
Gondwana reconstruction of the Ross/Delamerian orogens in Victoria Land and Australia [1993, eng] **E-55554**
Gottardiite, a new antarctic zeolite [1996, eng] **E-55902**
Growth temperature preferences of fungal strains from Victoria Land, Antarctica [1996, eng] **B-54688**
Historic sites and monuments of Victoria Land [1994, ita] **A-54338**
Isotopic and chemical compositions of Ferrar magmas from Victoria Land [1995, eng] **E-54111**
Landform and sediment associations of dry-based glaciers in arid polar environments [1996, eng] **E-55660**
Landscape evolution in Antarctica [1988, eng] **E-55647**
Late Cambrian trilobites from the Marine Group, northern Victoria Land, Antarctica [1984, eng] **E-55838**
Paleoclimatic reconstructions from antarctic volcanic ash deposits [1996, eng] **E-54828**
Paleomagnetic investigations in Victoria Land [1995, eng] **L-54934**
Paleomagnetism from the Middle Tertiary Meander Intrusives of Victoria Land [1996, eng] **E-54556**
Pliocene paleoclimate of Dry Valleys of Southern Victoria Land [1996, eng] **E-55681**
Remotely controlled aircraft for antarctic surveys: new exploration technologies [1995, ita] **C-54782**
Thermal biosystem of Mount Rittmann fumaroles [1996, eng] **B-55311**
Uplift of the Transantarctic Mountains [1988, eng] **E-55646**
Water soluble substances in terrestrial antarctic plants and microbes [1989, eng] **B-55649**

Viking Valley
Soil algae image analysis for detection of environmental change [1994, eng] **B-54382**

Vostok Station
135,000-year Vostok SPECMAP common temporal framework [1993, eng] **I-54352**
Aging effects on translational lattice vibrations in ice I_h [1996, eng] **F-55672**
Application of AMS ^{14}C dating to ice core research [1995, eng] **F-55166**
Atmospheric CO_2 and isotopic carbon-13 dioxide in ice-core air bubble [1994, eng] **F-54103**
Breakdown freezes ice core project [1996, eng] **A-54490**
Climate of the penultimate ice age according to data from an antarctic ice core [1993, rus] **I-54795**
CO_2 paleoclimatology from ice cores and Javan marine deposits [1996, eng] **F-56292**
Diagnostics of the polar ionosphere using oblique and reverse-oblique sounding [1991, rus] **K-54167**
Earth's atmospheric record in ice cores [1995, eng] **I-55097**
Evaluation of ionospheric inhomogeneities using reverse-oblique sounding [1991, rus] **K-54168**
Freshwater sub-ice antarctic lake [1996, eng] **E-55121**
Great lake under the ice [1996, eng] **E-55289**
Hemispheric climate relations revealed by bottom sediment/ice core correlations [1996, eng] **I-55683**
Interactions between greenhouse gases and climate over the last climatic cycle [1989, eng] **I-55852**
Isotope analysis of Greenland ice sheet stratigraphic disturbances [1996, eng] **F-55220**
Lake Vostok beneath the antarctic ice sheet—a Russian research proposal [1995, jpn] **F-54498**
Linear least squares method for time series analysis [1995, eng] **F-54184**
Microbiological studies on the central antarctic ice sheet [1993,] **F-56037**
On the age vs depth and optical clarity of deep ice at the South Pole [1995, eng] **F-54065**
Organic carbon paleo-pCO_2 and marine-ice core correlations and chronology [1996, eng] **F-54561**
Polar news/Notizie polari, Vol.10, No.12 [1995, ita] **A-54770**
Polar news/Notizie polari, Vol.11, No.3 [1996, ita] **I-55046**
Polar news/Notizie polari, Vol.11, No.5 [1996, ita] **A-55391**
Reverse signal parameters from the data of oblique sounding in the Antarctic [1995, eng] **K-55156**
Russian alternative energy sources in the Antarctic [1994, eng] **G-54872**
Science news from The Ice: highlights from the 1994-1995 austral summer [1995, eng] **A-55631**
Simultaneous satellite and ground-based observations of polar cap aurora [1996, eng] **K-55284**
Spectral deviations of HF signals in antarctic radio lines [1991, rus] **K-54169**
Vostok ice core deuterium variations over the last two glacial cycles [1995, eng] **I-54790**
Water kept liquid by warmth from within [1996, eng] **E-55290**

Walcott Névé
Antarctic search for meteorites project of 1993-1994 [1994, eng] **E-54092**

Walker Bay
Molting southern elephant seals and weather conditions on Livingston I. [1994, eng] **B-55581**

Wasa Station
Swedish antarctic scientific policy [1995, ita] A-54777

Weaver Peninsula
Sesterterpenoids of unprecedented skeletal class from an antarctic sponge [1995, eng] **B-54484**

Weddell Sea
Antarctic krill under perennial sea ice in the western Weddell Sea [1996, eng] **B-56277**
Antarctic Zone Flux Experiment [1996, eng] **J-55941**
Antifreeze glycopeptides and peptides in fish from the Weddell and Lazarev seas [1996, eng] **B-54647**
ARC: a source of multisensor satellite data for polar science [1992, eng] C-56028
Ascidians collected in the Weddell Sea [1994, eng] **B-56051**
Atmosphere-surface interactions over polar oceans and heterogeneous surfaces [1995, eng] **J-54762**
Atmospheric and oceanic forcing of Weddell Sea ice motion [1996, eng] **F-56045**
Atmospheric boundary layer over polar marine surfaces [1996, eng] **I-55991**
Atmospheric effects on sea ice radiometry [1996, ger] **I-56130**
Avifauna from the Weddell Sea, 1989-1990 [1993, spa] **B-54510**
Biogenic opal and barium as productivity change indicators [1995, ger] **J-54436**
Bottom plumes on the continental slope [1995, eng] **J-55208**
C-band backscatter measurements of winter sea-ice in the Weddell Sea, Antarctica [1995, eng] **F-54060**
Calanoides acutus egg production in the Weddell Sea in spring [1994, eng] **B-54285**
Carbon tetrachloride as tracer of Weddell Sea bottom waters [1996, eng] **J-56019**
Cenozoic glaciation: the marine record established by ocean drilling [1992, eng] **E-56175**
Changes in Antarctic Bottom Water properties in the western South Atlantic in the late 1980s [1996, eng] **J-55171**
Clay mineral distribution in antarctic oceanic surface sediments [1996, eng] **J-55079**
Climate changes in Antarctica over the past 500 years from ice core evidence [1996, eng] **F-55916**
Cold adaptation in some antarctic fishes [1995, eng] **B-54784**
Cold adaptations of bacteria [1996, eng] **B-54604**
Daily vertical migration of antarctic copepods beneath the ice [1995, eng] **B-54563**
Description of Zerotulidae fam. nov. (Littorinoidea) [1996, eng] **B-56137**
Disturbances in the thermohaline structure of the near-surface ocean layer in the wake of an iceberg [1995, rus] **J-54818**
Dominant copepods of the Weddell Sea [1995, eng] **B-54126**
Drifted snow affects momentum exchange over sea ice [1994, eng] **F-54148**
Effects of pack ice on Weddell Sea plankton distribution [1995, eng] **B-54809**
EM of the fish tectum [1996, eng] **B-54785**
Epibiota and attachment substrata of deep-water brachiopods [1996, eng] **B-55356**
Euphausiid larvae in the Antarctic Circumpolar Current-Weddell Sea Confluence Zone in winter [1992, rus] **B-55467**
Euphausiid larvae in the eastern Weddell Gyre [1992, rus] **B-55466**
Fall phytoplankton biomass, P-I relationships and primary production in the Weddell Sea [1996, eng] **B-54687**
Field observations of microwave backscatter from Weddell Sea ice [1996, eng] **F-54420**
Foraminifera, biofacies and sedimentary hydrodynamics in Antarctica [1990, spa] **E-55247**
Freezing driven upwelling in antarctic sea ice biological systems [1996, eng] **B-55448**
GCM response to an antarctic polynya [1995, eng] **I-54419**
Glacial southern ocean paleoceanography [1996, eng] **J-55608**
Global climate model with 1°-resolution sea ice and ocean components [1995, eng] **F-56239**
Heat flux through Weddell Sea ice cover [1996, eng] **F-55170**
Hemoglobin system in an antarctic teleost [1996, eng] **B-56269**
High resolution observations of Weddell Sea surface currents using ERS-1 SAR sea-ice motion vectors [1995, eng] **F-54062**
Humification dynamics of algal derived dissolved organic carbon [1995, eng] **B-55844**
Hydrocarbons in antarctic ice algae [1995, eng] **B-55061**
Ice-edge hydrography between Elephant I. and the South Orkneys, summer 1988-1989 [1990, spa] **J-55232**
Iceberg observations and estimation of submarine ridges in the western Weddell Sea [1995, eng] **F-54061**
In situ measurements of the surface temperature in the western Weddell Sea [1995, eng] **I-56220**

Inductive measurement of antarctic marine sediment porosity [1993, eng] **J-54859**
Interaction between arctic and antarctic sea ice [1995, eng] **F-54483**
Isotope analysis of Weddell Sea sediment stratigraphy and paleoproductivity [1995, eng] **J-54299**
Laophontidae n.sp.(Copepoda: Harpacticoida) from the Weddell Sea [1996, eng] **B-55984**
Large-scale circulation and its variability in the south Indian Ocean from TOPEX/POSEIDON altimetry [1995, eng] **J-54307**
Latest Paleocene crisis in the deep sea: ostracode succession at Maud Rise, southern ocean [1996, eng] **J-55504**
Levels of anxiety aboard two expeditionary ships [1995, eng] **H-55932**
Life cycles of Weddell Sea copepods [1995, eng] **B-54125**
Low-level atmospheric jets over the western Weddell Sea [1995, eng] **I-56234**
Microbial biology of melting Weddell Sea ice [1996, eng] **B-55313**
Microbial biomass and light attenuation in the Weddell Sea [1996, eng] **B-55047**
Microbial sea ice ecology at a coastal antarctic site [1996, eng] **B-55216**
Microplankton horizontal and vertical distribution patterns in the Weddell Sea, Jan. 1989 [1993, spa] **B-54505**
Modeling the heating and melting of sea ice through light absorption by microalgae [1996, eng] **F-54347**
Morphology and morphogenesis of a new species of protozoa in sea ice [1994, eng] **B-54258**
Morphometrics of three Paleocene coccolith genera [1996, eng] **E-56114**
New *Echiniphimedia* species from Antarctica [1988, ger] **B-55489**
New myzostomid from the antarctic ophiuroid *Ophiacantha disjuncta* [1995, eng] **B-55483**
Occurrence of organic halogens in marine mammals [1995, eng] **B-55062**
Optical properties of sea ice [1996, eng] **F-55957**
Ozone layer concentration over the Weddell Sea [1995, eng] **I-55584**
Parameterization of lead formation in the Weddell Sea using SAR-derived ice velocity fields [1994, eng] **F-55782**
Partial disintegration of antarctic ice [1995, por] **F-54745**
Pelagic bryozoan from Antarctica [1995, eng] **B-54064**
Petrography of fragmented material from bottom sediments of the Weddell Sea [1986, rus] **E-56318**
Photochemistry of antarctic waters during the 1993 austral spring [1994, eng] **J-54154**
Phytoplankton pigment profiles, Weddell-Scotia Confluence, spring 1993 [1994, eng] **B-54281**
Phytoplankton responses to ultraviolet irradiance in the Weddell-Scotia Confluence in spring [1994, eng] **B-54839**
Pioneering science on the frozen frontier [1995, eng] **B-54441**
Pleistocene glacial transition indicators in Weddell Sea sediments [1996, eng] **J-55438**
Polar herbiverous copepods [1995, eng] **B-54122**
Polychaetes of the Weddell Sea [1996, ger] **B-54679**
Potential role of ERS-1 scatterometer data in support of ice navigation [1994, eng] **F-55781**
Protein turnover in antarctic trekkers [1996, eng] **H-56301**
Radiolaria in surface sediments off the northwest Antarctic Peninsula [1989, chi] **B-55745**
Salinity tolerance of planktonic foraminifers in sea ice [1996, eng] **B-55451**
Science in Antarctica [1982, eng] **A-55648**
Science news from The Ice: highlights from the 1994-1995 austral summer [1995, eng] **A-55631**
Sea ice extent and surface mass accumulation in Amundsen, Bellingshausen and Weddell seas [1993, eng] **F-54517**
Seasonal lipid dynamics in dominant antarctic copepods [1996, eng] **B-55364**
Sediments from the southern Weddell Sea [1995, eng] **J-55204**
Snow, sea-ice and radar observations during ANT X/4: summary data report [1994, eng] **F-56171**
Southern ocean oceanography and models [1994, eng] **J-55872**
Southern ocean Pleistocene water mass circulation variations [1996, eng] **J-54458**
Spatial and temporal variability in southern ocean sea ice coverage [1993, eng] **F-55227**
Sponges and other fauna of the Weddell Sea [1996, ger] **B-56129**
Spreading of lower circumpolar deep water in the Atlantic Ocean [1995, eng] **J-54306**
State of Weddell Sea echinoderms [1996, ger] **B-54680**
Status of a Weddell Sea foraminifer [1996, ger] **B-54681**
Stresses in sea ice in the neighboring force interaction zone [1995, eng] **F-55228**
Structure and ecology of antarctic deep-sea meiofauna [1995, eng] **B-54197**
Sulfide oxidation products in the antarctic atmosphere [1996, eng] **I-55306**
Taxonomy and ecology of the ciliate fauna of the Weddell Sea [1995, eng] **B-54252**
Temperature and salinity of the central Weddell Sea [1994, eng] **J-54153**
Tintinnid ecology and associated microzooplankton in the Weddell-Scotia confluence [1993, spa] **B-54504**
Trace elements in the Weddell Sea water and sediments in the continental shelf area [1995, eng] **J-54115**
Turbulent oceanic heat flux during winter in the central Weddell Sea [1995, eng] **J-56229**
Ubiquitous marine Arthropod from Martha Coast [1994, ger] **B-55106**
Ultraviolet absorbance by diatom populations from the Weddell-Scotia Confluence [1994, eng] **B-54838**
Ultraviolet and visible solar irradiance at the Weddell-Scotia Confluence, spring 1993 [1994, eng] **I-54840**
Wave-pancake ice interactions [1994, eng] **F-54149**
Weddell Sea glaciomarine sedimentation variations [1996, eng] **E-55545**
Weddell Sea ice drift: kinematics and wind forcing [1996, eng] **F-56139**
Weddell-1 ice drift station in Antarctica [1995, eng] **J-55699**
Western Weddell stratification and ice cover [1994, eng] **F-54152**
Wind and thermohaline circulations and the ACC [1996, eng] **J-55931**
Wind events compared with polynya area estimates derived from SSM/I data [1993, eng] **F-55286**
Winter-summer chemical differences in the Weddell Sea surface waters [1995, eng] **J-54254**
Wintertime polar low over the eastern Weddell Sea [1996, eng] **I-54643**

Weiss Amphitheater
Volcanic history of Mount Sidley [1994, eng] **E-54394**

West Antarctica
Antarctic Bivalvia from 1984-1986 German cruises [1989, ger] **B-55492**
Atmospheric boundary layer dynamics near Ross Island and over West Antarctica [1995, eng] **I-56337**
Atmospheric circulation and sea ice extent in the west Antarctic Peninsula area [1994, eng] **F-54378**
Benthic foraminifera off the Antarctic Peninsula [1994, eng] **B-54393**
Contemporaneous volcanoes of Bransfield Rift, West Antarctica [1993, eng] **E-54144**
Foraminifera distribution and environmental factors in waters northwest of the Antarctic Peninsula [1989, chi] **B-55744**
INACH's 32nd Antarctic Scientific Expedition [1996, spa] **D-55362**
Krill biomass variations in West Antarctica, 1981-1989 [1993, eng] **B-54137**
NSIDC notes, issue No.18, summer 1996 [1996, eng] **A-56002**
Satellite imagery of the onset of streaming flow of ice streams C and D, West Antarctica [1996, eng] **F-54890**
Satellite investigation of spring cloud cover in West Antarctica [1994, eng] **I-54850**
School searching and echo sounder image analysis of krill (*Euphausia superba*) [1989, chi] **B-55742**
Spatial distribution of krill during the "Antártida 86 11" expedition [1990, spa] **A-55239**
West Antarctic ice sheet removal of subglacial volcanic artefacts [1995, eng] **E-54235**
West Antarctic rift system [1996, ger] **E-55111**

Wilkes Land
Properties of antarctic maritime and coastal soils [1995, eng] **E-54237**
Sketch of hydrographic structure and circulation in the waters near Wilkes Land, Antarctica [1989, chi] **J-55708**

Wilkins Ice Shelf
Antarctic map from the Geosat Radar Altimeter Geodetic Mission [1992, eng] **C-55933**

Williams, Point
Reappraisal of the Triassic flora from Williams Point [1995, eng] **E-54978**

Wilson Piedmont Glacier
Late Wisconsin/Holocene history of the Wilson Piedmont Glacier [1994, eng] **E-54079**

Wilson, Lake
Climate change in the recent evolution of a pro-glacial lake [1996, eng] **B-54555**

Windmill Islands
Delimiters of antarctic lichen communities [1995, eng] **B-54663**
Grenville-age belts and associated older terranes in Australia and Antarctica [1995, eng] **E-54908**
Structural and metamorphic geology, Windmill Is. [1995, eng] **E-54164**
Tardigrades from Windmill Is. [1996, eng] **B-55163**

Winter Quarters Bay
Behavior of antarctic benthic invertebrates exposed to contamination [1995, eng] **B-54192**
FY-1994 environmental sampling and analysis plan for Winter Quarters Bay [1993, eng] **B-54736**

Wisconsin Range
Petrology and classification of new antarctic carbonaceous chondrites PCA91082, TIL91722 and WIS91600 [1996, eng] **E-55664**

Wood Bay
Organic compounds in antarctic sea-water and pack-ice [1995, eng] **J-55891**

Wright Peninsula
Using multiple data sources to enhance photogrammetry for mapping antarctic terrain [1995, eng] **C-55278**

Wright Valley
Dating exposed rock surfaces in Wright Valley [1995, eng] **E-55968**
Landscape evolution in Antarctica [1988, eng] **E-55647**
Thirty-years sand wedge growth in lower Wright Valley [1994, eng] **E-54078**

Zhongshan Station
- Aero-photogrammetric mapping at Zhongshan Station [1995, chi] **C-54599**
- Analysis of gravity tides observation at Zhongshan Station in Antarctica [1995, chi] **L-54602**
- Direct measurements of atmospheric ozone at Zhongshan Station, Antarctica [1996, chi] **I-55328**
- Geodetic network at Larsemann Hills, Antarctica [1995, chi] **C-54600**
- Geomagnetic field daily variations at Zhongshan Station, 1991 [1995, chi] **K-54598**
- Ice algae biomass variations around Zhongshan Station [1995, chi] **B-54582**
- Ionospheric disturbance caused by magnetospheric convection [1995, chi] **K-54584**
- Magnetic storm changes at Zhongshan Station and in China [1996, chi] **K-55327**
- Nano- and microdiatom distribution in the intertidal zones of Zhongshan Station [1995, eng] **B-54569**
- Physio-psychology of antarctic expeditioners [1995, eng] **H-54572**
- Polar stratospheric clouds at Zhongshan Station [1995, eng] **I-54571**
- Radiation and ozone data at Zhongshan and Great Wall stations, 1993-1994 [1995, eng] **I-55422**
- Seasonal chlorophyll changes in waters under fast ice, 1992 [1996, chi] **J-55876**
